PEL Topics Index

Emacs Reference Cards

☝With PEL you can access these via the `<f11> ? e r` key sequence.
See ∑ Help/Info

These are links to the PDF version of official English version of the quick reference cards for **GNU Emacs** and popular external packages.
PEL documents Emacs key bindings as well, these cards provide useful complement to what PEL provides.

➢ PEL Overview

- PEL repo
- PEL Readme
- PEL Manual

This table holds links to the **PEL file tables**. Each cell holds a hyperlink to the GitHub hosted raw PDF table.
☝For the best user experience, use a browser that can render PDF directly instead of downloading.
- **Mozilla Firefox** (version > 78) does that perfectly. You may need to activate a plug-in for other browsers.
- With that in place, you can browse through all the PDFs quickly and reach a vast amount of information.

☝From within Emacs open this topic index PDF by typing the **`<f11> ? <f1>`** key sequence.
☝The symbols, colour coding and various other conventions are described in the ➢Legend PDF.

∑ Emacs Features

The links that start with only ∑ Emacs generic features, the blue links are external packages. The green links are mostly PEL extensions.

These PEL tables describe the Emacs commands and key bindings for generic concepts and features.

Emacs uses a concept of modes. See:
- Emacs Major and Minor Modes
  - Major Modes
  - Minor Modes
  - Choosing Modes

PEL provides several key sequences to toggle minor modes, described in the relevant PDFs.

Emacs commands can be executed by name or bound to key sequences. The commands may have arguments and keys can express them.
See:
- Emacs Keys

XRef - Cross Reference Tools

Emacs supports various cross reference mechanisms described in the ∑ Xref table. These mechanisms take advantage of various external tools and integrate with them. Notes about those tools are available in the tables listed in this section. 🚧 This is work in progress.

Xref-Support	Xref-Backend				

Build Tools

PEL has support for several build tools but they are not all documented in a page.
Aside from the list below, PEL supports installation and partial setup of the following tools:
- Nix 📦 Requires **nix-mode** external package 🔧 activated when **pel-use-nix-mode** user-option is tuned on.
- Tup 📦 Requires **tup-mode** external package 🔧 activated when **pel-use-tup** user-option is tuned on.

Programming Languages

Main Paradigm of Programming Language Families
- ***Actor Model:*** Ⓐ
- ***Concatenative*** Ⓚ
- ***Concurrent:*** ⓒ
- ***Functional:*** ⓕ ***Pure:*** Ⓕ
- ***Imperative:*** ⓘ ***or no token***

- The programming languages supported by PEL are listed here in alphabetical order.
- PEL also provides basic support for other programming languages not listed here.
- Emacs supports other programming languages directly, not listed here.

Upcoming support for Elm, Purescript, ReasonML, Typescript and documentation of support for Javascript.

Emacs has support for several programming languages. PEL currently adds extra support for some of them, listed below.
- The number of programming languages supported explicitly by PEL will grow over time.

BEAM Programming Languages	*Functional Languages*	Javascript target	Lisp Family Languages	Stack Based Languages	Command Line Scripting Languages
Curly Bracket Languages	Java Virtual Machine Languages	ML Family Languages	Scheme Language Dialects		OS App Control Scripting Languages

The following lists the programming languages in alphabetical order.
- The cell colours give a coarse indication of the programming language family(ies).
