📖 Emacs Features

• A Guided Tour of Emacs.

• Awesome-Emacs

• MELPA and GNU ELPA

The tables listed at right describe Emacs commands & key bindings for concepts & features. The cell is light-blue for major mode, light-red for minor mode specific concepts. Grey cells are links into other pages for important concepts. Emacs commands can be executed by name or bound to key sequences. They describe the commands, their arguments and the key sequences bound to them.

Emacs keys

Numeric Arguments

You can also:

Run Command by Name

Emacs uses a concept of modes:

Emacs Major and Minor Modes

Major Modes

Minor Modes

Choosing Modes

PEL provides several key sequences to toggle minor modes.

Programming Languages

Main Paradigm of Programming Language Families

Actor Model:📄

Concatenative📄

Concurrent:📄

Domain Specific📄

Dynamicd

Functional:📄Pure:📄

Imperative:📄or no token

Object Oriented📄

Procedural📄

Has Syntactic Macros:📄

System Level📄

The programming languages supported by PEL are listed here in alphabetical order.

Emacs (and PEL) also provides basic support for other programming languages not listed here.

Emacs has major mode support for several programming languages. PEL extends Emacs support for some of them (others are marked 🚧).

BEAM Programming Languages
