## Perl 5 Keywords

<b>Perl Functions</b> <b>Perl syntax</b>	
 <b>Cautionary notes</b>	
<ul style="list-style-type: none"> <li><b><a href="#">each</a></b> keyword is broken</li> <li>Use <b><a href="#">Var::Pairs</a></b> instead.</li> </ul>	

## Perl 5 Operators

<b>Perl 5 Operators</b>	Perl has a large number of operators, listed below with their precedence and associativity.		
Note:	<ul style="list-style-type: none"><li>• <u>C Operators missing from Perl</u> : unary &amp;, unary * and (type)</li><li>• <u>Quote and Quote-like operators</u> : in Perl quotes are operators and they provide various kind of interpolating and pattern matching capabilities.</li></ul>		
Associativity: one of: <ul style="list-style-type: none"><li>• right</li><li>• left</li><li>• NA : not associative: cannot use more than one of these operators in sequence.</li><li>• CH: chained</li></ul>	left	<b><u>terms and list operators (leftward)</u></b>	
	left	<b><u>Arrow Operator:</u></b>	->
	NA	<b><u>Auto-increment and Uato-decrement:</u></b>	++ --
	right	<b><u>Exponentiation:</u></b>	**
	right	<b><u>Symbolic Unary Operators:</u></b>	! ~ -. \ and unary + and -
	left	<b><u>Binding operators:</u></b>	-- !-
	left	<b><u>Multiplicative Operators:</u></b>	* / % x
	left	<b><u>Additive Operators:</u></b>	+ - .
	left	<b><u>Shift Operators:</u></b>	<< >>
	NA	<b><u>named unary operators</u></b>	
	NA	<b><u>Class instance Operator:</u></b>	isa
	CH	<b><u>Relational Operators:</u></b>	< > <= >= lt gt le ge
	CH/NA	<b><u>Equality Operators:</u></b>	== != eq ne <=> cmp ==
	left.	<b><u>Bitwise And:</u></b>	& &.
	left	<b><u>Bitwise Or and Exclusive Or:</u></b>	. ^ ^.
	left	<b><u>C-style Logical And:</u></b>	&&
	left	<b><u>Logical Defined-Or:</u></b>	^^ //
	NA	<b><u>Range Operators:</u></b>	.. ...
	right	<b><u>Conditional Operator:</u></b>	?:
	right	<b><u>Assignment Operators:</u></b>	=
			**= += *= &= &.= <<= &&=
			-= /=  =  .= >>=   =
			.= %= ^= ^.=
			//=
			x=
			goto last next redo dump
			, =>
	left	<b><u>Comma, fat-comma Operators:</u></b>	
	NA	<b><u>list operators (rightward)</u></b>	
		<b><u>Logical Not:</u></b>	not
	right	<b><u>Logical And:</u></b>	and
	left	<b><u>Logical or and Exclusive or:</u></b>	or xor
	left		
<b><u>File test operators</u></b>	It is possible to combine the file test operator with the AND operator as in the following example:		<pre>if (-e \$fname &amp;&amp; -f _ &amp;&amp; -r _ ){     print("\$fname exists and is readable\n"); }</pre>
The most important operators are shown here. They check if the file...	<b>-r</b> is readable	<b>-e</b> exists.	<b>-b</b> is a block special file.
	<b>-w</b> is writable	<b>-z</b> is empty.	<b>-c</b> is a character special file.
	<b>-x</b> is executable	<b>-s</b> has nonzero size (returns size in bytes).	<b>-t</b> handle is opened to a tty.
	<b>-o</b> is owned by effective uid.	<b>-f</b> is a plain file.	<b>-u</b> has setuid bit set.
	<b>-R</b> is readable	<b>-d</b> is a directory.	<b>-g</b> has setgid bit set.
	<b>-W</b> is writable	<b>-l</b> is a symbolic link.	<b>-k</b> has sticky bit set.
	<b>-X</b> is executable	<b>-p</b> is a named pipe (FIFO) or Filehandle is a pipe.	<b>-T</b> is an ASCII text file (heuristic guess).
	<b>-O</b> file is owned by real uid.	<b>-S</b> is a socket.	<b>-B</b> is a “binary” file (opposite of -T).

## Perl 5 Constants and Variables

<b>Perl Constants</b>	<ul style="list-style-type: none"> <li><a href="#">Perl pragma to declare constants</a>.  But be aware that these are still not read-only, that they inject sub-routines and have several limitations. Read the doc!!</li> <li><a href="#">CPAN modules for defining constants</a> by Neil Bowers . Of particular interest: <b><a href="#">Const::Fast</a></b> and <b><a href="#">Attribute::Constant</a></b> for efficient read-only constants.</li> </ul>		
<b>Perl Special Variables</b> <ul style="list-style-type: none"> <li><b><a href="#">Perl Variables</a></b></li> </ul>	<ul style="list-style-type: none"> <li> To get information about a Perl special variable from the command line use the <code>perldoc -v</code> command.</li> <li>To get information about <code>\$&lt;</code> use: <b><code>perldoc -v '\$&lt;'</code></b></li> </ul>		
<ul style="list-style-type: none"> <li><b><a href="#">General variables</a></b></li> </ul>			
default input and pattern searching space	<ul style="list-style-type: none"> <li><a href="#">\$ARG</a></li> <li><a href="#">\$_</a></li> </ul>	<a href="#">subroutine parameters</a>	<ul style="list-style-type: none"> <li><a href="#">@ARG</a></li> <li><a href="#">@_</a></li> </ul>
list separator	<ul style="list-style-type: none"> <li><a href="#">\$LIST_SEPARATOR</a></li> <li><a href="#">\$"</a></li> </ul>	<a href="#">Subscript separator for multidimensional array emulation</a>	<ul style="list-style-type: none"> <li><a href="#">\$\$SUBSCRIPT_SEPARATOR</a></li> <li><a href="#">\$\$SUBSEP</a></li> <li><a href="#">\$;</a></li> </ul>
Name of executed program	<ul style="list-style-type: none"> <li><a href="#">\$PROGRAM_NAME</a></li> <li><a href="#">\$0</a></li> </ul>	<a href="#">Name used to execute the current copy of Perl</a>	<ul style="list-style-type: none"> <li><a href="#">\$EXECUTABLE_NAME</a></li> <li><a href="#">\$^X</a></li> </ul>
Perl process ID	<ul style="list-style-type: none"> <li><a href="#">\$PROCESS_ID</a></li> <li><a href="#">\$PID</a></li> <li><a href="#">\$\$</a></li> </ul>		
<a href="#">Process real GID</a>	<ul style="list-style-type: none"> <li><a href="#">\$REAL_GROUP_ID</a></li> <li><a href="#">\$GID</a></li> <li><a href="#">\$(</a></li> </ul>	<a href="#">Process effective GID</a>	<ul style="list-style-type: none"> <li><a href="#">\$EFFECTIVE_GROUP_ID</a></li> <li><a href="#">\$EGID</a></li> <li><a href="#">\$)</a></li> </ul>
<a href="#">Process real UID</a>	<ul style="list-style-type: none"> <li><a href="#">\$REAL_USER_ID</a></li> <li><a href="#">\$UID</a></li> <li><a href="#">\$&lt;</a></li> </ul>	<a href="#">Process effective UID</a>	<ul style="list-style-type: none"> <li><a href="#">\$EFFECTIVE_USER_ID\$</a></li> <li><a href="#">\$EUID</a></li> <li><a href="#">\$&gt;</a></li> </ul>
