

## ⚠ Emacs support for Haskell ⚠

Description	Keystroke	Function	Note
<div> <a href="#">Haskell Editing</a> </div> <div>                     See: <a href="#">Haskell Mode Manual</a> </div>	Emacs does not provide any built-in mode for Haskell. <div> <div>📦</div> <div>The <a href="#">haskell-mode</a> external package is required.</div> </div> <div> <div>🔧</div> <div>PEL installs and activates it when the <a href="#">pel-use-haskell</a> and the <a href="#">pel-use-haskell-mode</a> user-options are both turned on. When <a href="#">pel-use-haskell</a> is turned on the <a href="#">&lt;f11&gt; SPC h</a> prefix is made available.</div> </div> <div> <div>•</div> <div>In a Haskell buffer these commands are accessible via the <a href="#">&lt;f12&gt;</a> key. It also activates the ability to activate minor modes for the haskell major mode through the PEL <a href="#">pel-haskell-activates-minor-modes</a> user-option.</div> </div> <div> <div>⚠</div> <div>PEL support for Haskell is not complete. More commands should be provided and documented. Haskell support is preliminary.</div> </div>

If the prefix argument (like <a href="#">C-u</a> or <a href="#">M--</a> ) is used, then it opens the remote GitHub hosted raw PDF instead. If the <a href="#">pel-flip-help-pdf-arg</a> user-option is set it's the other way around.
