

Web

Description	Keystroke	Function	Note
Search the Web	 This page is in early stage of development.		
Search the web for text in region (or prompt)	M-s M-w	(eww-search-words)	<p>Search the web for the text between BEG and END.</p> <ul style="list-style-type: none">If region is active (and not whitespace), search the web for the text between BEG and END. Else, prompt the user for a search string. See the 'eww-search-prefix' variable for the search engine used.<ul style="list-style-type: none">The default 'eww-search-prefix' value is nil. Emacs then uses the system's default search engine, which is DuckDuckGo. <p>The results of the search are shown in a *eww* buffer, and web browsing is done using that window. This works in both modes. The rendering is better in graphics mode, but it also works in terminal mode.</p>
