

# ⚠️ Emacs support for the Smalltalk Programming Language ⚠️

Description	Keystroke	Function	Note
<b>Smalltalk Editing</b>	PEL supports for the Smalltalk programming language is experimental and not yet documented except for what you see here. 📦 The GNU <code>smalltalk-mode</code> external package is installed when 📦 the <code>pel-use-smalltalk</code> user-option is set to t. ⚠️ PEL supports GNU Smalltalk <code>smalltalk-mode</code> . This is minimal early support.

<b>Open this PDF file.</b> See also: <a href="#">📘 Help/Info</a>	<div>&lt;f11&gt; SPC : &lt;f1&gt;</div> <div>&lt;f12&gt; &lt;f1&gt;</div>	(pel-help-pdf &optional OPEN-WEB-PAGE)	Open the <a href="#">📘 - Smalltalk</a> local PDF. If the prefix argument (like <code>C-u</code> or <code>M--</code> ) is used, then it opens the remote GitHub hosted raw PDF instead. If the <code>pel-flip-help-pdf-arg</code> user-option is set it's the other way around.
<a href="#">📘 Customize</a> PEL Smalltalk support	<div>&lt;f11&gt; SPC : &lt;f2&gt;</div> <div>&lt;f12&gt; &lt;f2&gt;</div>	(pel-customize-pel &optional OTHER-WINDOW)	Customize PEL Smalltalk support. <ul style="list-style-type: none"> <li>If OTHER-WINDOW is non-nil (use <code>C-u</code>), display in another window.</li> </ul>
<a href="#">📘 Customize</a> Emacs Smalltalk support	<div>&lt;f11&gt; SPC : &lt;f3&gt;</div> <div>&lt;f12&gt; &lt;f3&gt;</div>	(pel-customize-library &optional OTHER-WINDOW)	Customize Emacs Smalltalk support: <a href="#">swift</a> <ul style="list-style-type: none"> <li>If OTHER-WINDOW is non-nil (use <code>C-u</code>), display in another window.</li> </ul>
<b>Comments</b>			
<b>Toggle display of comments in buffer or active region</b> See also: <a href="#">📘 Comments</a>	<div>&lt;f11&gt; ; ;</div>	(hide/show-comments-toggle &optional START END)	Toggle hiding/showing of comments in the active region or whole buffer. <ul style="list-style-type: none"> <li>If the region is active then toggle in the region. Otherwise, in the whole buffer.</li> </ul> 📦 This requires the <a href="#">hide-comnt.el</a> package (see <a href="#">📘 Comments</a> ). 📦 PEL activates it when the <code>pel-use-hide-comnt</code> user option is t.
