

# Emacs Support for Chicken Scheme

Description	Keystroke	Function	Note
<a href="#">Chicken Scheme Programming Language Support</a>  See also: • <a href="#">🔗 File/Directory Variables</a>	<div>  <b>Chicken</b> is an implementation of Scheme, used for embedding in other programs and provide scripting. PEL support for Chicken Scheme is preliminary. More work is required to identify Chicken specific support.                             </div> <div>  PEL activates Chicken Scheme support when the <b>pel-use-chibi</b> user-option is turned on (t).                             </div> <div>                                 PEL provide extra support for the Chicken Scheme programming language. Most support is provided by Emacs support for <a href="#">℥ - Scheme</a> .                             </div> <div>                                 • The Chicken programming language is a Scheme implementation. The Chicken Scheme files use the same extension as Scheme: .ss.                             </div>
