

Reference - Themes

Topic & Link	Description
Themes directory	The emacs/etc/themes contain a list of elisp files for several themes.
<u>Color Themes @ EmacsWiki</u>	Provide overview information. Need to read this first.
<u>Emacs Theme Gallery</u>	The site shows a screenshot of the various themes along with their popularity and link to download them.
<u>Emacs Themes</u>	Another variety of themes, looks like a large list, but not as well organized. However the screen shots are larger and sometimes (because it's not consistent) contain more views of the various modes.
<u>emacs-jp/replace-colorthemse</u>	Identified by EmacsWiki. Images & Source. No presentation. Describe that overall package of various themes is available at MELPA as color-theme-modern and describes how themes are loaded and used.
<u>Emacs Themes Gallery</u>	Seems related to one person only. Could not access code.
<u>Another Emacs Themes github projet (emacs 24 +)</u>	One screenshot per theme, source code available.
<u>Spacemacs Themes</u>	List themes available in spacemacs and ways to change them. Just 1 screenshot per them, no lik to code.
<u>Color themes gallery somewhere for emacs? @ StackOverflow</u>	Lists several themes sites.
<u>Emacs: Set Color Theme @ ErgoEmacs</u>	Good overview. Also describes how to just change the background color and how to list the available colors: <ul style="list-style-type: none"> - <code>M-x set-background-color</code> - <code>M-x list-color-display</code>
