All of this documentation is accessible from within Emacs: the manuals, the info page, the <b>docstrings</b> of functions and variables, the customization system. You can search for manual, topic, command, function, variable, object names, values inside variables.</p> <p><b>PEL</b> also provides a <b>large set of topic-specific PDF files</b> such as this one (identified as ⓘ <b>Help/Info</b>). See the <a href="#">≥Index</a> it has links to all PEL PDFs.</p> <ul style="list-style-type: none"> <li>These PDFs are heavily hyper-linked to each other, to the Emacs manual and to external package home and description sites.</li> <li>Use the <i>context sensitive</i> <b>pel-help-pdf</b> command to open the PDF of interest from within Emacs. That command can be invoked by: <ul style="list-style-type: none"> <li>several global key sequences; each one identifies a specific PDF to open. These key sequences all start with <code>&lt;f11&gt;</code> and end with <code>&lt;f1&gt;</code>.</li> <li>with the <code>&lt;f12&gt; &lt;f1&gt;</code> local key sequence that open the PDF related to the buffer's major mode.</li> </ul> </li> <li>For some of these key sequences, the command also supports one or several <i>secondary topics</i> ; these are mostly related to PDF describing the languages, but also some topics specific to complex minor modes. For example, in a make file using the GNU make syntax, the secondary topic is a description of the GNU make syntax. Inside an emacs-lisp buffer, the secondary topics are lisp<sup>y</sup> and Emacs Lisp syntax. <ul style="list-style-type: none"> <li>To select the secondary topic PDF, use a positive key command prefix with an absolute value greater than 1; such as <code>C-u</code> or <code>M-2</code> .</li> </ul> </li> </ul> <p>By default the <b>pel-help-pdf</b> command opens a local PDF file with the local PDF reader. To open the GitHub hosted PDF web page instead use a <b>negative</b> prefix key. To open the main topic, use the <code>M--</code> prefix or the <code>M--1</code> prefix to the command. To open the secondary topic use <code>M--2</code>.</p> <p>The default behaviour can be modified by the following user-options:</p> <ul style="list-style-type: none"> <li><b>pel-flip-help-pdf-arg</b> : If set to <code>t</code>, the command opens the GitHub file with no (or positive) prefix and opens the local PDF file with negative prefix.</li> <li><b>pel-open-pdf-method</b> : Selects how to open the local PDF files: with PDF reader (default) or with the web browser identified by <b>pel-browser-used</b>.</li> <li><b>pel-browser-used</b> : Selects how the browsing mechanism: the default is to use the method identified by the <b>browse-url-browser-function</b> user-option. The alternative is to force using <b>Firefox</b> or Chrome, two browsers that can render the PEL PDF files. That greatly helps browsing the PDFs.</li> <li><b>browse-url-browser-function</b> : selects the default browsing behaviour, applied to all Emacs commands that browse files.</li> <li><b>pel-emacs-source-directory</b> : identifies the root directory of Emacs source code repo. Set it to permanently remember Emacs C source code.</li> </ul> <p>⚠ When running Emacs under a SSH session PEL prevents opening these PDF help files unless you set <b>pel-help-under-ssh</b> user-option to <code>t</code>.</p> |                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                 |

| • <a href="#">Key Sequence help</a>                                                                             | Emacs has a large number of key bindings as these tables clearly show. Key strokes are extended in various ways and key prefixes is one of them. Following commands show available keys, help learning the key sequences, list the remaining available bindings, and list recent history of typed keys.                                                                                                                                                                                                                                                                                                                                                        |                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|                                                                                                                                                | 📦 Requires the <b>esup</b> external package. 🛠 PEL activates it when the <b>pel-use-esup</b> customization variable is set to t.<br><br>⚠ The esup profiler has several limitations: 1) it only supports Emacs running in graphics mode. 2) esup steps into `require' and `load' forms at the top level of a file but not if they are enclosed in any other statements. This limits its usefulness when conditional loading is located in the init.el file and when the use-package macros are used. Both of these techniques are used by PEL to reduce init time. |                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
