

🚧 Emacs support for the Lua Programming Language 🚧

Description	Keystroke	Function	Note
Lua Editing	<p>Emacs has built-in support for Lua. The Lua-mode is one of the cc-modes.</p> <ul style="list-style-type: none"> Since Lua syntax is very close to C syntax, Emacs implements Lua-mode as a descendent of cc-mode. <p>🔗 PEL supports it when pel-use-lua user options is turned on.</p> <ul style="list-style-type: none"> On Emacs >= 30, PEL supports tree-sitter if pel-use-tree-sitter is set to t. <ul style="list-style-type: none"> You can activate tree-sitter for Lua by setting pel-use-lua to 'with-tree-sitter (as long as pel-use-tree-sitter is t and Emacs >= 30). See 🔗 Tree Sitter Files with the .lua extensions are recognized as Lua source files and use the lua-mode or lua-ts-mode according to the value of pel-use-lua, Speedbar support for .lua files listing functions and types. See 🔗 Speedbar for more info about it. <p>• Most cc-mode available capabilities are available to Lua-mode. PEL integrates a lot of those capabilities, but PEL support for Lua is in its early stages and all available key bindings are not yet identified in this table as they should be. 🚧</p>

<p>Open this PDF file. See also: 🔗 Help/Info</p>	<div><f11> SPC u <f1></div> <div><f12> <f1></div>	<p>(pel-help-pdf &optional OPEN-WEB-PAGE)</p>	<p>Open the 🔗 I - Lua local PDF. If the prefix argument (like C-u or M--) is used, then it opens the remote GitHub hosted raw PDF instead. If the pel-flip-help-pdf-arg user-option is set it's the other way around.</p>
<p>🔗 Customize PEL Lua support</p>	<div><f11> SPC u <f2></div> <div><f12> <f2></div>	<p>(pel-customize-pel &optional OTHER-WINDOW)</p>	<p>Customize PEL Lua support.</p> <ul style="list-style-type: none"> If OTHER-WINDOW is non-nil (use C-u), display in another window.
<p>🔗 Customize Emacs Lua support</p>	<div><f11> SPC u <f3></div> <div><f12> <f3></div>	<p>(pel-customize-library &optional OTHER-WINDOW)</p>	<p>Customize Emacs Lua support (which is currently placed in C group): C</p> <ul style="list-style-type: none"> If OTHER-WINDOW is non-nil (use C-u), display in another window.
<p>Select Lua-mode for extension-less file</p> <p>👉 The <f12> key is available only until a PEL controlled major mode is activated. Then it becomes a buffer prefix key.</p>	<div><f12></div>	<p>(pel-as &optional FORCE)</p>	<p>Inside a fundamental-mode buffer, interactively select major mode for the buffer. Re-do it with arg. 👉 see Create extension-less executable scripts with PEL.</p> <p>This command is mostly used to set the major mode of a buffer in fundamental-mode', when the <f12> key binding is available for it. After being used once in a buffer the major mode is selected and the PEL key binding will not be available when PEL supports the major mode.</p> <p>For Lua file, select Lua. It will insert a shebang line specified by 🔗 pel-lua-shebang-line user option.</p> <p>PEL defines the (as &optional FORCE) alias unless 🔗 pel-has-alias-as user-option is set to nil. You can use M-x as to invoke it.</p>
<p>Show PEL setup for Lua</p>	<div><f12> ?</div> <div><f11> SPC u ?</div>	<p>(pel-lua-setup-info &optional APPEND)</p>	<p>Display Lua setup information inside a "pel-lua-info" buffer with buttons providing quick access to the customization buffer of each variable shown. The information shown includes the value and interpretation of:</p> <ul style="list-style-type: none"> pel-use-lua (whether the classic or tree-sitter based major mode is used). the user options controlling indentation and hard tab width rendering. <p>To append information in the buffer instead of clearing the previous content type any prefix argument (such as C-u) before the command keystroke.</p>
<p>Help for word</p>	<div>C-c C-f</div>	<p>(lua-search-documentation)</p>	<p>Search Lua documentation for the word at the point.</p>
<p>Comments</p>			
<p>Toggle display of comments in buffer or active region See also: 🔗 Comments</p>	<div><f11> ; ;</div>	<p>(hide/show-comments-toggle &optional START END)</p>	<p>Toggle hiding/showing of comments in the active region or whole buffer.</p> <ul style="list-style-type: none"> If the region is active then toggle in the region. Otherwise, in the whole buffer. <p>📦 This requires the hide-comnt.el package (see 🔗 Comments). 🔗 PEL activates it when the pel-use-hide-comnt user option is t.</p>
<p>Lua process</p>	<div>C-c C-l</div>	<p>(lua-send-buffer)</p>	<p>Send whole buffer to Lua process.</p>
<p>Generic code skeletons • tempo skeletons See also: • 🔗 Inserting Text • T Templates</p>	<p>Several mechanisms have been developed to allow easy insertion of predefined text in Emacs. ⚠ PEL does not yet define skeletons for Lua. You can use the generic one.</p> <ul style="list-style-type: none"> Emacs provides the built-in skeleton mechanism and the tempo skeletons. PEL supports both. They are used a little bit differently. PEL provides generic tempo skeletons you can use for Lua until PEL adds Lua-specific skeletons. <ul style="list-style-type: none"> PEL provides key bindings to the tempo skeletons: the generic code templates, accessible via the <f6> prefix key, and the language-specific code templates, accessible via the <f12> key prefix. 		
<p>🔗 Customize PEL Text Insertions control for Lua code skeletons.</p>	<div><f6> <f2></div> <div><f12> <f12> <f2></div>	<p>(pel-customize-pel &optional OTHER-WINDOW)</p> <p>(pel-customize-generic-skels &optional OTHER-WINDOW)</p>	<p>Open the customization groups that control the format of the various skeletons including the generic skeleton used by the <f6> h key and the <f12><f12> h key (see below).</p> <ul style="list-style-type: none"> If OTHER-WINDOW is non-nil (use C-u) , display in other window.
<p>Insert generic file module header block — Language agnostic</p> <p>After inserting the template, navigate though areas that must be filled with:</p> <ul style="list-style-type: none"> forward: C-c . backward: C-c , 	<div><f6> h</div> <div><f12> <f12> h</div>	<p>(pel-generic-file-header)</p>	<p>Insert a file header block at the top of the file. Works only for buffer visiting a file.</p> <p>⚠ The command key binding <f6> h is available only 1 second after Emacs has started.</p> <p>⚠ As mentioned above PEL does not yet define Lua-specific skeletons, this uses the generic one.</p> <p>👉 Specify the format of the header via the user-options in the pel-pkg-generic-code-style customization group accessible via <f6> <f2></p> <ul style="list-style-type: none"> Inside a Lua buffer, <f12> <f2> provides access to the following customization groups: <p>👉 After inserting a template, use tempo-forward-mark and tempo-backward-mark to move to the beginning of each section that must be filled.</p>
<p>Toggle pel-tempo-mode</p>	<div><f6> SPC</div> <div><f12> <f12> SPC</div>	<p>(pel-tempo-mode &optional ARG)</p>	<p>Toggle PEL tempo mode on/off.</p> <p>PEL tempo mode activates C-c . and C-c , as well as to C-c C-. and C-c C-, key bindings to navigate across tempo mark hot-spots. When pel-tempo-mode is active the pel-tempo-mode lighter (⚡) is shown on the status bar. The second set of keys are only available in graphics mode.</p> <p>👉 The pel-generic-file-header command inserts the text using a tempo skeleton: the PEL tempo mode is automatically activated by typing <f6> h.</p>
<p>Expand any tag in template</p> <p>Note: PEL default skeleton does not use tags.</p>	<div><f6> <f12></div> <div><f12> <f12> <f12></div>	<p>(tempo-complete-tag &optional SILENT)</p>	<p>Look for a tag and expand it. All the tags in the tag lists in ‘tempo-local-tags’ (this includes ‘tempo-tags’) are searched for a match for the text before the point. The way the string to match for is determined can be altered with the variable ‘tempo-match-finder’. If ‘tempo-match-finder’ returns nil, then the results are the same as no match at all.</p> <ul style="list-style-type: none"> If a single match is found, the corresponding template is expanded in place of the matching string. If a partial completion or no match at all is found, and SILENT is non-nil, the function will give a signal. If a partial completion is found and ‘tempo-show-completion-buffer’ is non-nil, a buffer containing possible completions is displayed.
