## Perl 5 Syntax

<div>Perl 5 Operators</div> <div>Perl has a large number of operators, listed below with their precedence and associativity. Note:<ul style="list-style-type: none"><li>C Operators missing from Perl : unary &amp;, unary * and (type)</li><li>Quote and Quote-like operators : in Perl quotes are operators and they provide various kind of interpolating and pattern matching capabilities.</li></ul></div>					
Associativity: one of: <ul style="list-style-type: none"><li>right</li><li>left</li><li>NA : not associative: cannot use more than one of these operators in sequence.</li><li>CH: chained</li></ul>	left	<b>terms and list operators (leftward)</b>			
	left	<b>Arrow Operator:</b> ->			
	NA	<b>Auto-increment and Uato-decrement:</b> ++ --			
	right	<b>Exponentiation:</b> **			
	right	<b>Symbolic Unary Operators:</b> ! ~ -. \ and unary + and -			
	left	<b>Binding operators:</b> =~ !~			
	left	<b>Multiplicative Operators:</b> * / % x			
	left	<b>Additive Operators:</b> + - .			
	left	<b>Shift Operators:</b> << >>			
	NA	<b>named unary operators</b>			
	NA	<b>Class instance Operator:</b> isa			
	CH	<b>Relational Operators:</b> < > <= >= lt gt le ge			
	CH/NA	<b>Equality Operators:</b> == != eq ne <=> cmp ==			
	left.	<b>Bitwise And:</b> & &.			
	left	<b>Bitwise Or and Exclusive Or:</b>    . ^ ^.			
	left	<b>C-style Logical And:</b> &&			
	left	<b>Logical Defined-Or:</b>    ^^ //			
	NA	<b>Range Operators:</b> .. ...			
	right	<b>Conditional Operator:</b> ?:			
	right	<b>Assignment Operators:</b> =			
		**= += *= &= &.= <<= &&=			
		-= /=  =  .= >>=   =			
		.= %= ^= ^.= //.=			
		x=			
		goto last next redo dump			
		, =>			
	left	<b>Comma, fat-comma Operators:</b>			
	NA	<b>list operators (rightward)</b>			
	right	<b>Logical Not:</b> not			
	left	<b>Logical And:</b> and			
	left	<b>Logical or and Exclusive or:</b> or xor			

<div>File test operators</div>	It is possible to combine the file test operator with the AND operator as in the following example:			<pre>if (-e \$fname &amp;&amp; -f _ &amp;&amp; -r _ ){     print("\$fname exists and is readable\n"); }</pre>	
--------------------------------	---	--	--	---	--

The most important operators are shown here. They check if the file...	<div><div>-r</div>is readable</div> <div><div>-w</div>is writable</div> <div><div>-x</div>is executable</div> <div><div>-o</div>is owned by effective uid.</div> <div><div>-R</div>is readable</div> <div><div>-W</div>is writable</div> <div><div>-X</div>is executable</div> <div><div>-O</div>file is owned by real uid.</div>	<div><div>-e</div>exists.</div> <div><div>-z</div>is empty.</div> <div><div>-s</div>has nonzero size (returns size in bytes).</div> <div><div>-f</div>is a plain file.</div> <div><div>-d</div>is a directory.</div> <div><div>-l</div>is a symbolic link.</div> <div><div>-p</div>is a named pipe (FIFO) or Filehandle is a pipe.</div> <div><div>-S</div>is a socket.</div>	<div><div>-b</div>is a block special file.</div> <div><div>-c</div>is a character special file.</div> <div><div>-t</div>handle is opened to a tty.</div> <div><div>-u</div>has setuid bit set.</div> <div><div>-g</div>has setgid bit set.</div> <div><div>-k</div>has sticky bit set.</div> <div><div>-T</div>is an ASCII text file (heuristic guess).</div> <div><div>-B</div>is a “binary” file (opposite of -T).</div>
---	---	---	--

<div>Perl Special Variables</div> <div><div><div></div>To get information about a Perl special variable from the command line use the perldoc -v command.</div><div><div></div>To get information about \$&lt; use: perldoc -v '\$&lt;'</div></div>
