

# AsciiDoc Support

| Description                 | Keystroke   | Function   | Note  |
|-----------------------------|---|--|---|
| <a href="#">ASCII DOC</a>   | <p>AsciiDoc is a lightweight text markup.</p> <p> The <a href="#">adoc-mode</a> external package support AsciiDoc.  PEL downloads, installs and activates it when the <b>pel-use-asciidoc</b> user option is set to <b>t</b>.</p> <p>PEL does not add any extra key bindings for AsciiDoc support. It simply activates adoc-mode for files with the .adoc file extension. You can turn it on explicitly on another file type by executing the adoc-mode command explicitly using <b>M-x adoc-mode</b></p> |  |   |
| Turns adoc-mode major mode. | <b>M-x adoc-mode</b>  | <a href="#">(adoc-mode)</a>                                      | Turns the adoc-mode on.<br> Currently this command does not allow turning the mode off.  |
| Demote a structure          | <b>C-c C-d</b>  | <a href="#">(adoc-demote &amp;optional ARG)</a>                  | Demotes the structure at point ARG levels.  |
| Goto anchor defining ID     | <b>C-c C-g</b>  | <a href="#">(adoc-goto-ref-label ID)</a>                         | Goto the anchor defining the id ID. Prompts for reference label.  |
| Promote a structure         | <b>C-c C-p</b>  | <a href="#">(adoc-promote &amp;optional ARG)</a>                 | Promotes the structure at point ARG levels. <ul style="list-style-type: none"><li>When ARG is nil (i.e. when no prefix arg is given), it defaults to 1. When ARG is negative, level is demoted that many levels.</li><li>The intention is that the structure can be a title or a list element or anything else which has a 'level'.  However currently it works only for titles.</li></ul> |
| Toggle title type.          | <b>C-c C-t</b>  | <a href="#">(adoc-toggle-title-type &amp;optional TYPE-TYPE)</a> | Toggles title's type. <ul style="list-style-type: none"><li>If TYPE-TYPE is nil, title's type is toggled. If TYPE-TYPE is non-nil, the sub type is toggled.</li></ul>   |
