🔗 Emacs Features

• A Guided Tour of Emacs.

• Awesome-Emacs

• MELPA and GNU ELPA

The PEL tables named at right describe the Emacs commands and key bindings for generic Emacs concepts and features.

Emacs commands can be executed by name or bound to key sequences. The commands may have arguments and keys can express them.

• Emacs Keys

• Numeric Arguments

You can also:

• Run Command by Name

Emacs uses a concept of modes:

• Emacs Major and Minor Modes

• Major Modes

• Minor Modes

• Choosing Modes

PEL provides key sequences to toggle minor modes.

Programming Languages

Main Paradigm of Programming Language Families

• Actor Model: 🔄

• Concatenative 🔄

• Concurrent: 🔄

• Functional: 🔄 Pure: 🔄

• Imperative: 🔄 or no token

• Object Oriented 🔄

• Has Syntactic Macros: 🔄

The programming languages supported by PEL are listed here in alphabetical order.

Emacs (and PEL) also provides basic support for other programming languages not listed here.

Future support

for Crystal, Elm, Kotlin, Lua, Purescript, ReasonML, Seed7, Typescript, Zig and documentation of support for Ada, Fortran, Javascript, Java, Modula, Pascal (based on my need for them or requests (if any)).

These are links to the PDF version of official English version of the quick reference cards for GNU Emacs and popular external packages. PEL documents Emacs key bindings as well, these cards provide useful complement to what PEL provides.

This table holds links to the PEL file tables. Each cell holds a hyperlink to the GitHub hosted raw PDF table.

🗨 For the best user experience, use a browser that can render PDF directly instead of downloading.

• Mozilla Firefox (version > 78) does that perfectly. You may need to activate a plug-in for other browsers.

With that in place, you can browse through all the PDFs and reach a vast amount of information quickly.

🗨 From within Emacs open this topic index PDF by typing the <f11> ? <f1> key sequence. More help topics with <f11> ? p keys.

🗨 The symbols, colour coding and various other conventions are described in the ➤Legend PDF.

🔗 ✖ - Emacs Lisp Types

Emacs supports various cross reference mechanisms described in the 🔗 Xref table. These mechanisms take advantage of various external tools and integrate with them. Notes about those tools are available in the tables listed in this section.

🔗 Xref-Support

🔗 Xref-Backend

PEL has support for several build tools but they are not all documented in a page.

• Nix 📦 Requires nix-mode external package 🔗 activated when pel-use-nix-mode user-option is tuned on.

• Tup 📦 Requires tup-mode external package 🔗 activated when pel-use-tup user-option is tuned on.

Command Line Scripting Languages:

bash, sh, zsh

PEL supports installation and partial setup of the following tools:

Build Tools & Preprocessor

Emacs has major mode support for several programming languages. PEL currently adds extra support for some of them, listed below.

BEAM Programming Languages

Functional Languages

Javascript target

Lisp Family Languages

Lisp-like Languages

Curly Bracket Languages

Java Virtual Machine Languages

ML Family Languages

Scheme Language Dialects

Stack Based Languages

The following lists the programming languages in alphabetical order.

The cell colours give a coarse indication of the programming language family(ies).
