The tables at right describe Emacs concepts/ features commands & key bindings. Cell background is light-blue for major mode, light-red for minor mode specifics, grey for links to sections of other tables. Cells link titles starting with ∑ are Emacs generic features, blue links are external packages. The green links are mostly PEL extensions. Emacs commands can be executed by name or bound to key sequences. They describe the commands, their arguments and the key sequences bound to them.
- Emacs Keys and Numeric Arguments

You can also: Run Command by Name

Emacs uses a concept of modes:
- Emacs Major and Minor Modes
  - Major Modes
  - Minor Modes
  - Choosing Modes

PEL provides several key sequences to toggle minor modes dynamically.
