PEL Topics Index

Note: with PEL, type `<f11> <f1>` to open this PDF index.

Emacs Reference Cards

☝With PEL you can access these via the `<f11> ? e r` key sequence.
See ⅀ Help/Info

These are links to the PDF version of official English version of the quick reference cards for GNU Emacs and popular external packages.
PEL documents Emacs key bindings as well, these cards provide useful complement to what PEL provides.

➢ PEL Overview

(license)

- PEL repo
- PEL Readme
- PEL Manual
- PEL NEWS
- Discussions

This table holds links to the PDF file tables. Each cell holds a hyperlink to the GitHub hosted raw PDF table.
☝For the best user experience, use a browser that can render PDF directly instead of downloading.
- Mozilla Firefox (version > 78) does that perfectly. You may need to activate a plug-in for other browsers.
- With that in place, you can browse through all the PDFs and reach a vast amount of information quickly.

☝From within Emacs open this topic index PDF by typing the `<f11> ? <f1>` key sequence. More help topics with `<f11> ? p` keys.
☝The symbols, colour coding and various other conventions are described in the ➢Legend PDF.

- MELPA and GNU ELPA

☝ Run Emacs daemon & client on macOS

The PEL tables listed at right describe Emacs commands & key bindings for concepts & features. The cell color is light-blue for major mode, light-red for minor mode
Emacs commands can be executed by name or bound to key sequences. The commands may have ***arguments*** and keys can express them.
- Emacs Keys
- Numeric Arguments

You can also:
- Run Command by Name

Emacs uses a concept of modes:
- Emacs Major and Minor Modes
  - Major Modes
  - Minor Modes
  - Choosing Modes

PEL provides key sequences to toggle minor modes.

Cells link titles starting with only ⅀ are Emacs generic features, blue links are external packages. The green links are mostly PEL extensions.

XRef - Cross Reference Tools

See also: ⅀ Xref

Emacs supports various cross reference mechanisms described in the ⅀ Xref table. These mechanisms take advantage of various external tools and integrate with them. Notes about those tools are available in the tables listed in this section.

🚦 Xref-Support	🚦 Xref-Frontend	🚦 Xref-Backend

Build Tools & Preprocessor

PEL supports installation and partial setup of the following tools:

PEL has support for several build tools but they are not all documented in a page.
- Nix 📦 Requires nix-mode external package ☑ activated when pel-use-nix-mode user-option is tuned on.
- Tup 📦 Requires tup-mode external package ☑ activated when pel-use-tup user-option is tuned on.

Programming Languages

Main Paradigm of Programming Language Families
- ***Actor Model:*** Ⓐ
- ***Concatenative*** Ⓚ
- ***Concurrent:*** ⓒ
- ***Functional:*** ⓕ ***Pure:*** Ⓕ
- ***Imperative:*** ⓘ ***or no token***
- ***Object Oriented*** ꝏ
- ***Has Syntactic Macros:*** ⓜ

- The programming languages supported by PEL are listed here in alphabetical order.
- Emacs (and PEL) also provides basic support for other programming languages not listed here.

Future support for Crystal, Elm, Kotlin, Lua, Purescript, ReasonML, Seed7, Typescript, Zig and documentation of support for Ada, Fortran, Javascript, Java, Modula, Pascal (based on my need for them or requests (if any)).

Emacs has major mode support for several programming languages. PEL currently adds extra support for some of them, listed below.

BEAM Programming Languages	*Functional Languages*	Javascript target	Lisp Family Languages	Lisp-like Languages	
Curly Bracket Languages	Java Virtual Machine Languages	ML Family Languages	Scheme Language Dialects	Stack Based Languages	

The following lists the programming languages in alphabetical order.
- The cell colours give a coarse indication of the programming language family(ies).
