

# Emacs support for C3

Description	Keystroke	Function	Note
<b>C3 Support</b>			
• File associations			<p>C3 is a programming language based off the C language. It is relatively new and still evolving.</p> <p>PEL supports the only supported mode for C3: the <a href="#">tree-sitter-based c3-ts-mode</a> provided by the external <a href="#">c3-ts-mode</a> package.</p> <p>⚠️ Requires the <a href="#">c3-ts-mode</a> file  PEL installs it in the utils directory when <a href="#">pel-use-c3</a> user-option is set to t.</p> <ul style="list-style-type: none"> <li>PEL associates the files with the .c3, .c3i and .c3t file extensions with <a href="#">c3-ts-mode</a>.</li> <li>⚠️ PEL support for C3 requires <a href="#">Emacs &gt;= 30.1</a> because tree-sitter is required by <a href="#">c3-ts-mode</a>, and PEL only support tree-sitter for Emacs &gt;= 30.1:           <ul style="list-style-type: none"> <li>See <a href="#">Tree Sitter</a> and <a href="#">Tree-sitter</a>.</li> </ul> </li> <li>PEL activates <a href="#">Speedbar</a> support for the C3 files when <a href="#">pel-use-speedbar</a> user-option is on (set to t).</li> <li>imenu support provided by <a href="#">c3-ts-mode</a> is available.</li> </ul>
Last updated on:	2025-12-30		
<a href="#">Open this PDF file.</a> See also: <a href="#">Help/Info</a>	<a href="#"><code>&lt;f11&gt; SPC M-G &lt;f1&gt;</code></a> <a href="#"><code>&lt;f12&gt; &lt;f1&gt;</code></a>	( <a href="#">pel-help-pdf</a> &optional OPEN-WEB-PAGE)	Open the <a href="#">PI - C3</a> local PDF. If the prefix argument (like <b>C-u</b> or <b>M--</b> ) is used, then it opens the remote GitHub hosted raw PDF instead. If the <a href="#">pel-flip-help-pdf-arg</a> user-option is set it's the other way around.
<a href="#">Customize PEL C3 support</a>	<a href="#"><code>&lt;f11&gt; SPC M-G &lt;f2&gt;</code></a> <a href="#"><code>&lt;f12&gt; &lt;f2&gt;</code></a>	( <a href="#">pel-customize-pel</a> &optional OTHER-WINDOW)	Customize PEL C3 support. <ul style="list-style-type: none"> <li>If OTHER-WINDOW is non-nil (use <b>C-u</b>), display in another window.</li> </ul>
<a href="#">Customize Emacs C3 support</a>	<a href="#"><code>&lt;f11&gt; SPC M-G &lt;f3&gt;</code></a> <a href="#"><code>&lt;f12&gt; &lt;f3&gt;</code></a>	( <a href="#">pel-customize-library</a> &optional OTHER-WINDOW)	Customize Emacs C3 support: c3-ts. <ul style="list-style-type: none"> <li>If OTHER-WINDOW is non-nil (use <b>C-u</b>), display in another window.</li> <li>👉 Several aspects of c3-ts-mode are controlled by PEL as defined in the user-options accessed by <a href="#"><code>&lt;f12&gt; &lt;f2&gt;</code></a> and override the c3-ts ones.</li> </ul>
Show PEL setup for C3	<a href="#"><code>&lt;f11&gt; SPC M-G ?</code></a> <a href="#"><code>&lt;f12&gt; ?</code></a>	( <a href="#">pel-c3-setup-info</a> &optional APPEND)	Display C3 setup information inside a *pel-c3-info* buffer with buttons providing quick access to the customization buffer of each variable shown. The information shown includes the value and interpretation of: c3-ts-indent-offset, tab-width, activated minor modes To append information in the buffer instead of clearing the previous content type any prefix argument (such as <b>C-u</b> ) before the command keystroke.
Set visual rendering of hard tabs for the current buffer See <a href="#">Indentation</a> for more information and commands.	<a href="#"><code>&lt;f11&gt; &lt;tab&gt; w</code></a> <a href="#"><code>&lt;f12&gt; M-t</code></a>	( <a href="#">pel-set-tab-width</a> N)	Change the tab width of the current buffer, only affecting the display rendering of hard tabs inserted in the buffer text. Prompts for a new value in the [2, 8] range. <ul style="list-style-type: none"> <li>This modifies a buffer local value of the <a href="#">tab-width</a> user-option.</li> <li>The change is temporary and affects the current buffer only.</li> <li>To change the tab width used for all C3 source code files, change the '<a href="#">pel-c3-tab-width</a>' user-option variable instead.</li> </ul>
<b>Comments</b>	See also: <a href="#">Comments</a>		
<a href="#">Insert, realign, comment/uncomment region</a>	<b>M-;</b>	( <a href="#">comment-dwim</a> ARG)	Insert or realign comment on current line (or region if a region is active). If line/region is already commented, uncomment it. <ul style="list-style-type: none"> <li>On a single line, the comment is placed after the code.</li> <li><b>C-u M-;</b> executes comment-kill</li> </ul>
With PEL: Comment the current line with <b>M-0 M-;</b>		( <a href="#">pel-comment-dwim</a> ARG)	Same as <a href="#">comment-dwim</a> but comments the current line with a numeric ARG or 0.
Select C3 comment style	<a href="#"><code>&lt;f12&gt; &lt;f4&gt; M-;</code></a>	( <a href="#">pel-select-c3-comment-style</a> )	Select from the following C3 comment styles generated by <a href="#">comment-dwim</a> and <a href="#">pel-comment-dwim</a> commands: <ul style="list-style-type: none"> <li>//</li> <li>/* */</li> <li>&lt;*&gt;</li> </ul>
<b>Navigation</b>	<ul style="list-style-type: none"> <li><b>Shift selection</b> is supported by some commands, not all. The following symbols are used to identify whether the command supports shifts selection:               <ul style="list-style-type: none"> <li>▴ This command supports shift selection in GUI and terminal mode.</li> <li>▾ This command supports shift selection only in GUI mode.</li> <li>▴▴ This command supports shift selection in GUI mode and also in terminal mode under some conditions (described in the description cell for the command).</li> <li>† This command does <b>not</b> support shift selection. Sometimes for this you can first set the mark before moving.</li> <li>Pressing the Shift key when using the key binding for commands that do not show any of these 3 arrows have no impact on the shift selection (and may be inappropriate for the command).</li> </ul> </li> </ul>		
• <b>by defun : C3 definitions</b> 	<p>The commands move point by C3 definitions: <a href="#">functions</a>, <a href="#">macros</a>, <a href="#">structs</a>, <a href="#">bitstructs</a>, <a href="#">enums</a>, <a href="#">unions</a>, constants, <a href="#">alias</a>, <a href="#">typedef</a>.</p> <ul style="list-style-type: none"> <li>The <a href="#"><code>&lt;f6&gt;</code></a> cursor key mappings use <a href="#"><code>&lt;up&gt;</code></a> and <a href="#"><code>&lt;down&gt;</code></a> to move to the beginning of the defun, and <a href="#"><code>&lt;left&gt;</code></a> and <a href="#"><code>&lt;right&gt;</code></a> to the end of the defun.</li> <li>In this context the word <i>defun</i> corresponds to any of the C3 definitions listed above.</li> </ul> <p>These commands are all enhanced by the use of <a href="#">Tree Sitter</a>.</p>		
<b>Backward to beginning of C3 definition</b> 	<ul style="list-style-type: none"> <li><a href="#"><code>&lt;f6&gt; &lt;up&gt;</code></a></li> <li>• <b>C-M-a</b></li> <li>• <b>C-M-&lt;home&gt;</b></li> <li>• <b>C-[ C-a</b></li> <li>• <b>Esc C-a</b></li> </ul>	( <a href="#">beginning-of-defun</a> &optional ARG)	<p>Move backward to the beginning of a C3 definition.</p> <ul style="list-style-type: none"> <li>With ARG, do it that many times. Negative ARG means move forward to the ARGth following beginning of defun.</li> <li>⚠️ This command moves to the beginning go the next definition of the same nesting level of the current location. It skips the nested definitions.</li> </ul>
<b>Forward to end of C3 definition</b> 	<ul style="list-style-type: none"> <li><a href="#"><code>&lt;f6&gt; &lt;right&gt;</code></a></li> <li>• <b>C-M-e</b></li> <li>• <b>C-M-&lt;end&gt;</b></li> <li>• <b>C-[ C-e</b></li> <li>• <b>Esc C-e</b></li> </ul>	( <a href="#">end-of-defun</a> &optional ARG)	<p>Move forward to next end of C3 definition.</p> <ul style="list-style-type: none"> <li>With argument, do it that many times. Negative argument -N means move back to Nth preceding end of defun.</li> <li>⚠️ This command moves to the end of the next top-level function or class. It skips the nested definitions.</li> </ul>
<b>Forward to start of next C3 definition</b> 	<a href="#"><code>&lt;f6&gt; &lt;down&gt;</code></a>	( <a href="#">pel-beginning-of-next-defun</a> &optional SILENT DONT-PUSH_MARK)	<p>Move forward to the beginning of the next C3 definition.</p> <ul style="list-style-type: none"> <li>Beeps if does not find beginning of next function unless SILENT is non-nil.</li> <li>If the beginning of next function is found, push the start location to the mark ring unless DONT-PUSH_MARK is non-nil.           <ul style="list-style-type: none"> <li>Move back to previous position with <b>M-`</b> or <a href="#"><code>&lt;f6&gt;&lt;f6&gt;</code></a></li> </ul> </li> </ul>
<b>Backward to end of previous C3 definition</b> 	<a href="#"><code>&lt;f6&gt; &lt;left&gt;</code></a>	( <a href="#">pel-end-of-previous-defun</a> &optional SILENT DONT-PUSH_MARK)	<p>Move backwards to the end of the previous C3 definition.</p> <ul style="list-style-type: none"> <li>Beeps if does not find end of previous function unless SILENT is non-nil.</li> <li>If the end of previous function is found, push the start location to the mark ring unless DONT-PUSH_MARK is non-nil.           <ul style="list-style-type: none"> <li>Move back to previous position with <b>M-`</b> or <a href="#"><code>&lt;f6&gt;&lt;f6&gt;</code></a></li> </ul> </li> </ul>
• <b>by blocks</b>	<p>Blocks can be: pairs of brackets: ()[], {}, &lt;&gt;, "", ". Blocks using parentheses correspond to Lisp S-Expressions (sexp).</p> <p>👉 The commands move across C3 blocks but also to the next/previous syntax element.</p>		
<b>block backward</b> 	<ul style="list-style-type: none"> <li>• <b>C-M-&lt;left&gt;</b></li> <li>• <b>Esc C-&lt;left&gt;</b> ⚠️</li> <li>• <b>C-M-b</b></li> <li>• <b>C-[ C-b</b></li> <li>• <b>Esc C-b</b></li> </ul>	( <a href="#">backward-sexp</a> &optional ARG)	<p>Move backward across one balanced expression (sexp).</p> <ul style="list-style-type: none"> <li>With ARG, do it that many times. Negative arg -N means move forward across N balanced expressions. This command assumes point is not in a string or comment.</li> <li>⚠️ With PEL: if you want to use <b>Esc C-&lt;left&gt;</b> binding you must ensure that <a href="#">pel-windmove-on-esc-cursor</a> user option is set to nil.</li> <li>❖ <b>C-M-&lt;left&gt;</b> does not work on Windows, but <b>H-&lt;left&gt;</b> works.</li> </ul>

Description	Keystroke	Function	Note
			⚠️ Several Linux distros map <b>C-M-&lt;left&gt;</b> to desktop workspace operation. In that case you can either use another key binding or change Linux key binding in Systems->settings->keyboard->shortcuts to prevent it from using that key sequence.
block forward	⬆️ ⬇️ ⬇️	<ul style="list-style-type: none"> <li>• <b>C-M-&lt;right&gt;</b></li> <li>• <b>Esc C-&lt;right&gt;</b> ⚠️</li> <li>• <b>C-M-f</b></li> <li>• <b>C-[ C-f</b></li> <li>• <b>Esc C-f</b></li> </ul>	<b>(forward-sexp &amp;optional ARG)</b> Move forward across one balanced expression (sexp). <ul style="list-style-type: none"> <li>With ARG, do it that many times. Negative arg -N means move backward across N balanced expressions. This command assumes point is not in a string or comment.</li> <li>⚠️ With PEL: if you want to use <b>Esc C-&lt;right&gt;</b> binding you must ensure that <b>pel-windmove-on-esc-cursor</b> user option is set to nil. ❖ <b>C-M-&lt;right&gt;</b> does not work on Windows, but <b>H-&lt;right&gt;</b> does.</li> </ul>
			⚠️ Several Linux distros map <b>C-M-&lt;right&gt;</b> to desktop workspace operation. In that case you can either use another key binding or change Linux key binding in Systems->settings->keyboard->shortcuts to prevent it from using that key sequence.
Up/inside sexp hierarchy	⬆️ ⬇️ ⬇️	<ul style="list-style-type: none"> <li>• <b>C-M-&lt;up&gt;</b></li> <li>• <b>Esc C-&lt;up&gt;</b></li> <li>• <b>C-M-u</b></li> <li>• <b>C-[ C-u</b></li> <li>• <b>Esc C-u</b></li> </ul>	<b>(backward-up-list &amp;optional ARG ESCAPE-STRINGS NO-SYNTAX-CROSSING)</b> Move backward out of one level of parentheses. <ul style="list-style-type: none"> <li>This command will also work on other parentheses-like expressions defined by the current language mode. With ARG, do this that many times.</li> <li>A negative argument means move forward but still to a less deep spot.</li> <li>⚠️ With PEL: if you want to use <b>Esc C-&lt;up&gt;</b> binding you must ensure that <b>pel-windmove-on-esc-cursor</b> user option is set to nil. ❖ <b>C-M-&lt;up&gt;</b> does not work on Windows, but <b>H-&lt;up&gt;</b> does.</li> </ul>
Down/inside sexp/block	⬇️ ⬇️ ⬇️	<ul style="list-style-type: none"> <li>• <b>C-M-&lt;down&gt;</b></li> <li>• <b>Esc C-&lt;down&gt;</b></li> <li>• <b>C-M-d</b></li> <li>• <b>C-[ C-d</b></li> <li>• <b>Esc C-d</b></li> </ul>	<b>(down-list &amp;optional ARG)</b> Move forward down one level of parentheses. <ul style="list-style-type: none"> <li>This command will also work on other parentheses-like expressions defined by the current language mode.</li> <li>With ARG, do this that many times. A negative argument means move backward but still go down a level.</li> <li>This command assumes point is not in a string or comment.</li> <li>⚠️ With PEL: To use <b>Esc C-&lt;down&gt;</b> binding you must ensure that <b>pel-windmove-on-esc-cursor</b> user option is set to nil. ❖ <b>C-M-&lt;down&gt;</b> does not work on Windows, but <b>H-&lt;down&gt;</b> does.</li> </ul>
☰ Marking			
mark function	<b>C-M-h</b>	<b>(mark-defun &amp;optional ALLOW-EXTEND)</b>	Put mark at end of current definition, point at beginning. <ul style="list-style-type: none"> <li>With positive ARG, mark this and that many next definitions; with negative ARG, change the direction of marking.</li> <li>If the mark is active, it marks the next or previous definition(s) after the one(s) already marked.</li> </ul>
Compilation			
Compile C3 file See ☰ Compilation Mode	<b>&lt;f12&gt; c</b>	<b>(pel-c3-compile)</b>	Compile C3 file, show errors in compilation-mode buffer.
