This table holds links to all other [PEL topic oriented PDF table files](#) (hosted on Github).

For the best user experience, use a browser that can render PDF directly instead of downloading: all PDFs are heavily hyperlinked.

- [Mozilla Firefox](#) (version > 78) does that perfectly. You may need to activate a plug-in for other browsers.

From within Emacs open this topic index PDF by typing the `<f11> ? <f1>` key sequence. More help topics with `<f11> ? p` keys.

The symbols, [colour coding](#) and various other conventions are described in the [➤Legend](#) PDF.

The tables listed at right describe Emacs commands & key bindings for concepts & features. The cell is light-blue for major mode, light-red for minor mode specific concepts. Grey cells are links into other pages for important concepts.

Emacs commands can be executed by name or bound to key sequences. They describe the commands, their arguments and the key sequences bound to them.

- [Numeric Arguments](#)

You can also:

- [Run Command by Name](#)

Emacs uses a concept of modes:

- [Emacs Major and Minor Modes](#)
 - [Major Modes](#)
 - [Minor Modes](#)
 - [Choosing Modes](#)

PEL provides several key sequences to toggle minor modes.

Cells link titles starting with only `➤` are Emacs generic features, blue links are external packages. The green links are mostly PEL extensions.

The programming languages supported by PEL are listed here in alphabetical order.

Emacs (and PEL) also provides basic support for some of the one PEL does not support and for other programming languages not listed here.

Future support for APL, Carbon, Crystal, Elm, Groovy, Haxe, Kotlin, Pony, Purescript, ReasonML, Rebol, Red, Scala, Typescript and documentation of support for Fortran (based on my need for them or requests).
