Customizing Emacs with PEL

<u>Operation</u>	<u>Keystroke</u>	Function	Note
PEL: Control			Note tead of having to write Emacs Lisp code, you use Emacs easy-to-use customization system.
Emacs via Easy Customization	This table shows how to qu operate in the Customize m • The first section shows not the company of the company	ickly gain access to the customized ode with special key bindings to sp avigation commands available insid	data using commands that open buffers that show the customized data inside buffers that
	The "pel-use-" activat when you need them. Once a package or fea	et of customization groups and use ion user options identify what built- This way your Emacs will start quic ture is activated with the "pel-use-"	er option variables that control several aspects of Emacs: in or external Emacs Lisp package to use. PEL has logic to autoload the packages only ekly even if you have identified a large number of packages. 'user option, the other options control different behaviour of the activated package. el-init. PEL will activate the new configuration.
Customization		e customization data inside the Ema	acs init.el file, along with your other configuration, as Lisp code inside a custom-set -
Data	 variable form. When using PEL, and perhaps even if you're not, it's best to have Emacs store this data inside a separate file that you can put under VCS control independently from your init.el file. PEL promotes storing it inside the file ~/.emacs.d/emacs-customization.el. Store the following Emacs Lisp code snippet inside your init.el file to do so: (setq custom-file "~/.emacs.d/emacs-customization.el") (load custom-file) When using PEL, that code must be located before the call to pel-init. The use of a file to store Emacs customization data separate from the Emacs init.el file provides another degree of freedom and flexibility. It becomes possible to easily distribute a configuration to several computers (or even users) without sharing more private information that can be kept inside the init.el file. 		
Customize Mode	This section describes com- commands described in the		in Customize-mode showing the various user options you got access to using the
Move to Avy/Ace target See also: Navigation	o	(ace-link-custom)	 Highlight each target with an Avy/Ace single or double letter target. Type the letter(s) to move to that position. This is a very efficient and quick navigation mechanism. PRequires ace-link external package PEL downloads, installs and activates it when the pel-use-ace-link user option is set to t.
Apply customization changes	C-c C-c	(Custom-set &rest IGNORE)	Set the current value of all edited settings in the buffer.
Apply and Save customization changes	C-x C-s	(Custom-save &rest IGNORE)	 Set all edited settings, then save all settings that have been set. If a setting was edited and set before, this saves it. If a setting was merely edited before, this sets it then saves it.
Quit Customization and close buffer	q	(Custom-buffer-done &rest IGNORE)	Exit current Custom buffer according to 'custom-buffer-done-kill'.
Browse customize data tree	The following commands create a tree browser for the customize hierarchy inside a *Customize Browser* buffer. Each node can we expanded down to a single options and any can be collapsed.		
Browse complete customize data tree from root: Emacs	<f11> <f2> M-b</f2></f11>	(customize-browse &optional GROUP)	Open the customize tree bowser for the entire Emacs customization data already loaded. Lemacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible.
Browse PEL customize data tree	<f11> <f2> P M-b</f2></f11>	(pel-customize-browse)	Open the customize tree bowser for the entire PEL customization data (which is under Emacs/Convenience.
Emacs Easy Customization	With the following command you can gain access to the Customize-mode to customize anything of interest. With the first command you open the customization buffer and then you can search or browse what you want to customize. The second command allow you to open the buffer at a specific customization group and the third one at a specific user option. These commands prompt for the information you are looking for. You can always use completion by typing <tab> at any point to get a list of available groups or variables. Several of the commands below open the PEL customization group and one or several other groups related to the same topic, when these groups are already loaded. • If you set the OTHER-WINDOW argument, the command open s the buffer in another window and also open any group related that exists. For example you open the PEL group for grep with C-u <f11> <f2> g, this will also open the grep group, the rg and ripgrep groups if they are loaded. Each group will open inside its own bugger and the command will create the necessary windows. • **Until a package is loaded its customization group is unknown to Emacs and no buffer will be opened for it. To see the customization group, first load the package via one of its command that is auto-loaded or load it explicitly.</f2></f11></tab>		
		(customize-set-variable VARIABLE VALUE &optional COMMENT)	 Set the default for VARIABLE to VALUE, and return VALUE. VALUE is a Lisp object. If VARIABLE has a 'custom-set' property, that is used for setting VARIABLE, otherwise 'set-default' is used. If VARIABLE has a 'variable-interactive' property, that is used as if it were the arg to 'interactive' (which see) to interactively read the value. If VARIABLE has a 'custom-type' property, it must be a widget and the ':prompt-value' property of that widget will be used for reading the value. If given a prefix (or a COMMENT argument), also prompt for a comment.
		(set-variable VARIABLE VALUE &optional MAKE-LOCAL)	Set VARIABLE to VALUE. VALUE is a Lisp object. VARIABLE should be a user option variable name, a Lisp variable meant to be customized by users. You should enter VALUE in Lisp syntax, so if you want VALUE to be a string, you must surround it with doublequotes. VALUE is used literally, not evaluated. If VARIABLE has a 'variable-interactive' property, that is used as if it were the arg to 'interactive' (which see) to interactively read VALUE. If VARIABLE has been defined with 'defcustom', then the type information in the definition is used to check that VALUE is valid. Note that this function is at heart equivalent to the basic 'set' function. For a variable defined with 'defcustom', it does not pay attention to any :set property that the variable might have (if you want that, use M-x customize-set-variable instead). With a prefix argument, set VARIABLE to VALUE buffer-locally.
Customize Emacs	<f11> <f2> c</f2></f11>	(customize)	Select a customization buffer which you can use to set user options. User options are structured into "groups". Initially the top-level group 'Emacs' and its immediate subgroups are shown; the contents of those subgroups are initially hidden. Emacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible.
Customize a specific group	<f11> <f2> g</f2></f11>	(customize-group &optional GROUP OTHER-WINDOW)	Customize GROUP, which must be a customization group. If OTHER-WINDOW is non-nil (use C-u), display in another window. This command provides completion and you can use it to detect groups. Emacs is only able to show the name names of groups that are defined in files that have already been loaded. You won't be able to open a group that is not already loaded.

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>	
Customize a user option	<f11> <f2> o</f2></f11>	(customize-option SYMBOL)	Customize SYMBOL, which must be a user option. • As with groups, Emacs provides completion for user options, allowing you to detect user options.	
			Emacs is only able to show the name names of user options that are defined in files that have already been loaded. You won't be able to open a group that is not already loaded.	
Input Completion Mode Selection	PEL supports several input completion modes that kick in with the M-x, C-x b, C-x C-f, <f1> o and many other commands. PEL supports the following input completion modes: 1. Emacs' default tab completion 2. Pelly mode completion</f1>			
See also: Completion/Input	2. We helm mode completion : set pel-use-helm to t. 3. Ido mode completion : set pel-use-ido to t			
	4. V lvy mode comple		pel-use-ivy to t	
	5. Vy mode completion with Counsel mode : set pel-use-counsel to t 6. Vido/Helm mode where Ido is used for dealing with Files and buffers and Helm is used everywhere else (including all Helm specific commands).			
	 Use <f11><f1> c, to customize the PEL completion group user options above.</f1></f11> Set the pel-initial-completion-mode user option to select which completion mode is used when Emacs starts. 			
	As soon as one of the extra completion mode is activated via the corresponding pel-use- user option, PEL makes the following commands available to change the completion mode and to see which one is currently active.			
Select the completion mode	<f11> M-c</f11>	(pel-select-completion-mode)	Prompt user for completion mode to activate. The available modes depend on what is currently activated by customization. See the list above.	
Show what completion mode is currently used.	<f11> ? c</f11>	(pel-show-active-completion-mode)	Display the completion mode currently used.	
Search Tools Selection See also: Search/Replace	PEL supports several search tools that impact the way the C-s command operates. PEL supports the following search tools: • Emacs' default ISearch • Manzu, ISearch with match count • Swiper search with overview match list • Use <f11><f1> s, to customize the PEL completion group user options above. • Set the pel-initial-search-tool user option to select which search tool is used when Emacs starts.</f1></f11>			
	currently used search tool a	nd to see which one is currently ac		
Show which search tool is currently used	<f1> ? s</f1>	(pel-show-active-search-tool)	Display the currently used search tool.	
Select search tool to use	<f11> s s</f11>	(pel-select-search-tool)	Prompt user for search tool to use with C-s. Show new active one. • Emacs normally maps the search-forward command to C-s. • PEL provides the ability to activate the following tools that can be activated for searching: • • The Anzu external package • activated by pel-use-anzu user option. Anzu provides a match count in the modeline when search command is used. • • The Swiper external package • activated by pel-use-swiper user option. Swiper is not using isarch-forward; it shows a list of matching lines in the mini-buffer. • • Use the <f11> command to open the PEL search customize group and set the pel-initial-search-tool user option to identify which tool is used when Emacs starts.</f11>	
			Being able to search using either Emacs default ISearch (see below) and Swiper helps at they are both very useful in different scenarios.	
Customize PEL support	The following commands opens the Emacs customization group related to a PEL topic. Most of these commands do not prompt; they open the customization buffer at the requested group. If you prefix the following commands with C-u PEL will also open the customization groups related to the specific feature. To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable. For motion variables that control mode hooks (eq. the flyspell automatic activation for specific major modes), you also need to restart Emacs.			
All PEL	<f11> <f2> P !</f2></f11>	(pel-cfg &optional OTHER-WINDOW)	Customize PEL support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
	The following key bindings almost all use the same PEL command: (pel-customize-pel & optional OTHER-WINDOW). The command detects the key sequence that invoked it to select the customization group to open. If there are more than one it prompts for the one to open. If a group is not loaded, PEL prompts for loading it. • All of these commands open the buffer inside another window if a prefix argument (like C-u) is typed first.			
<u>∑ Align</u>	<f11> t a <f2></f2></f11>	Customize PEL support for text a		
∑ Auto-Completion	<f11> , <f2></f2></f11>	Customize PEL auto-completion	support: auto-complete, company and hippie-expand.	
∑ Bookmarks	<f11> ' <f2></f2></f11>	Customize PEL support for bookmark groups: bookmark, bm.		
<u> </u>	<f11> b <f2></f2></f11>	Customize PEL support for buffer	Customize PEL support for buffer management: hexl.	
<u> ∑ Comments</u>	<f11> ; <f2></f2></f11>	Customize Emacs support for comment hide control: hide-cmnt.		
<u> ∑ Cursor</u>	<f11> m <f2></f2></f11>	Customize PEL support for cursor and multiple-cursors.		
<u></u> Diff & Merge	<f11> d <f2></f2></f11>	Customize PEL support for diff: ztree.		
<u>∑M</u> <u>Dired</u>	<f11> f <f2> 2</f2></f11>	Customize PEL support for dired,	Customize PEL support for dired, directory editor.	
∑ Drawing	<f11> D <f2></f2></f11>	Customize PEL drawing mode su	pport.	
<u></u> File-mngt	<f11> f <f2> 1</f2></f11>	Customize PEL support for file ma	anagement.	
<u>Frames</u>	<f11> F <f2></f2></f11>	Customize PEL frame manageme	ent support.	
<u> </u>	<f11> g <f2></f2></f11>	Customize PEL grep support. Groups: grep, ag, rg, ripgrep, wgrep.		
<u></u> Highlight	<f11> b h <f2></f2></f11>	Customize PEL support for buffer highlight management: parens, printer, rainbow-delimiters.		
∑ Inserting Text	<f11> i <f2></f2></f11>	Customize PEL text insertion support: lice, smart-dash, tempo, time-stamp, yasnippet		
<u> </u>	• <f11> k <f2> • <f11> k e <f2> • <f11> k 1 <f2></f2></f11></f2></f11></f2></f11>	Customize the PEL keyboard macro external package support: centimacro, emacros, elmacro.		
Input Completion: Sompletion/Input	<f11> <f2> P M-c 1</f2></f11>	(pel-cfg-pkg-completion &optional OTHER-WINDOW)	Customize PEL Input Completion support. • If OTHER-WINDOW is non-nil (use C-u), display in other window.	
<u>∑ Key-Chords</u>	<f11> <f2> P K</f2></f11>	(pel-cfg-pkg-key-chord &optional OTHER-WINDOW)	Customize PEL Key Chord support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
Navigation	<f11> <f2> P n 1</f2></f11>	(pel-cfg-pkg-navigation &optional OTHER-WINDOW)	Customize PEL navigation tools support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	

<u>Operation</u>	<u>Keystroke</u>	Function	Note
<u>∑ Scrolling</u>	<f11> <f2></f2></f11>	Customize PEL Scrolling support.	
<u></u> Search/Replace	<f11> s <f2></f2></f11>	Customize PEL basic search supp	ort.
Regular Expression Search/Replace	<f11> s x <f2></f2></f11>	Customize PEL regular expression tool support.	
<u>∑ Sessions</u>	<f11> S <f2></f2></f11>	Customize PEL Session support.	
<u></u> Shells	<f11> x <f2></f2></f11>	Customize PEL Shell support.	
<u></u> Speedbar	<f11> M-s <f2></f2></f11>	Customize PEL Speedbar support	
<u>Spell Checking</u>	<f11> \$ <f2></f2></f11>	Customize PEL support for: spell of flyspell-prog-mode.	checking. Identify which major modes will automatically activate either flyspell-mode or
∑ <u>Tags</u> - cross reference	<f11> X <f2></f2></f11>	Customize PEL cross-reference support: ctags/etags/gtags	
<u>> Text Modes</u>	<f11> t m <f2></f2></f11>	Customize PEL text management	support.
∑ Undo/Redo/Repeat/ Arg	<f11> u <f2></f2></f11>	Customize PEL undo support.	
<u> ▼ VCS</u>	<f11> v <f2></f2></f11>	Customize PEL Version Control Sy	rstem support.
<u>∑ Windows</u>	<f11> w <f2></f2></f11>	Customize PEL Window support.	
Yasnippet <u>∑ Inserting Text</u>	<f11> y <f2></f2></f11>	Customize PEL Yasnippet text inse	ertion support.
Configure PEL Programming Language support	 The following commands opens the Emacs configuration group to configure PEL support for the specified programming language. You should be able to control most of the important features of the programming languages through these customizations including the activation of important packages as well as aspects of programming language styles like indentation style and width. The <f11> SPC key prefixes are available globally (for all buffers).</f11> The <f12> <f2> key is only available when point is in a buffer for one of the languages supported by PEL and open the PEL customization group for the programming language for the current buffer.</f2></f12> To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable. 		
AppleScript & text audio narration	• <f11> SPC a <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Applescript suppo	rt.
<u>рт - С</u>	• <f11> SPC c <f2> • <f12> <f2></f2></f12></f2></f11>	 If OTHER-WINDOW is non-nil (use C-u), display in another window. Customize PEL C support. If OTHER-WINDOW is non-nil (use C-u), display in another window. 	
<u> </u> βί - C++	• <f11> SPC C <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL C++ support: cpp. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u> 1</u> βί - D	• <f11> SPC D <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL D support: d-mode. • If OTHER-WINDOW is non-nil (use C - u), display in another window.	
ֆĭM-Lispy	• <f11> <f2> SPC M-L</f2></f11>	(pel-cfg-pkg-lisp &optional OTHER-WINDOW)	Customize support for Lisp programming languages - A group that also contains the groups for Emacs Lisp and Common Lisp: lispy. • If OTHER-WINDOW is non-nil (use C-u), display in another window.
<u></u>	• <f11> SPC 1 <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Elisp support: elint, eldoc, lispy. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
भ्रा - Common Lisp	• <f11> SPC L <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Lisp support: lisp, lispy. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
श्चर - Elixir	• <f11> SPC x <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Elixir support: alchemist, alchemist-iex. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u>β</u> ĭ - Erlang	• <f11> SPC e <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Erlang support: erlang, erldoc, edts, auto-highlight-symbol. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u>aμ̃ - Forth</u>	• <f11> SPC f <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Forth support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u>ֆῖ - Julia</u>	• <f11> SPC j <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Julia support: julia, julia-mode, julia-snail. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u>Nι - Python</u>	• <f11> SPC p <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Python support: python, python-flymake. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u></u> Pũ - REXX	• <f11> SPC R <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL REXX support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
Configure PEL Markup support	The <f11> SPC key pri The <f12> <f2> key is the markup language for the first first</f2></f12></f11>	nmands opens the Emacs customization group related to configure PEL support for the specific markup language. PC key prefixes are available globally (for all buffers). F2> key is only available when point is in a buffer for one of the languages supported by PEL and open the PEL customization group for guage for the current buffer. any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable.	
M reStructuredText	• <f11> SPC r <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL reStructuredText support. • If OTHER-WINDOW is non-nil (use C - u), display in another window.	
M Graphviz Dot	• <f11> SPC g <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Graphviz-Dot support. • If OTHER-WINDOW is non-nil (use C - u), display in another window.	
M PlantUML	• <f11> D u <f2> • <f11> SPC u <f2> • <f12> <f2></f2></f12></f2></f11></f2></f11>	Customize PEL PlantUML support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
Customize Specific Emacs Groups.	PEL will prompt you to loa Most of the key bindings use the <f11> , <f3></f3></f11>	ndings to open customization groups of Emacs built-in or external package. ad their specific file if they are not loaded. are mapped into the PEL key prefixes as the <f3> key member. For example to open auto-completion related groups you can key sequence. These are not listed here. prefixes for all Emacs concepts. It provides, however some key bindings to access the customization buffer for some of those. here:</f3>	
Permanently change the cursor's color See also: <u>See Cursor</u>	<f11> <f2> E C-c</f2></f11>	(pel-customize-cursor &optional OTHER-WINDOW)	Quicks access to the customize buffer to set the cursor default color. • It sets the color permanently if the customization is saved. • Only available in graphics mode.
locate	<f11> <f2> E 1</f2></f11>	(pel-cfge-locate &optional OTHER-WINDOW)	Customize locate. With C-u , display in another window.
man	<f11> <f2> E m</f2></f11>	(pel-cfge-man &optional OTHER-WINDOW)	Customize man. With c-u , display in another window.
Customize Projectile See also: Projectile	• <f11> <f2> E p • <f11> p <f2> • <f8> <f2></f2></f8></f2></f11></f2></f11>	(pel-cfge-browse-projectile &optional OTHER-WINDOW)	Open the projectile customization group where you can modify projectiles configuration. Available when the <u>projectile</u> external package is activated by PEL with the <u>peluse-projectile</u> user option is non-nil.

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>
browse-url	<f11> <f2> E u</f2></f11>	(pel-cfge-browse-url &optional OTHER-WINDOW)	Customize browse-url. With c-u , display in another window.
webjump	<f11> <f2> E j</f2></f11>	(pel-cfge-webjump &optional OTHER-WINDOW)	Customize webjump. With C-u , display in another window.
woman	<f11> <f2> E w</f2></f11>	(pel-cfge-woman &optional OTHER-WINDOW) Customize woman. With C-u, display in another window.	
Customize Emacs Libraries	The following key bindings almost all use the same PEL command: (pel-customize-library & optional OTHER-WINDOW). The command detects the key sequence that invoked it to select the customization group to open. If there are more than one it prompts for the one to open. If a group is not loaded, PEL prompts for loading it. If the related package is not installed PEL print a warning message. • For external packages you can use the same key sequence except for the last key: replace <f3> by <f2>: that sequence will open the PEL configuration buffer for the same topic. From that you will find the PEL option variable to activate the external package. • All of these commands open the buffer inside another window if a prefix argument (like C-u) is typed first.</f2></f3>		
<u></u> Align	<f11> t a <f3></f3></f11>	Customize Emacs text alignment support: open the align group.	
∑ Auto-Completion	<f11> , <f3></f3></f11>	Customize Emacs auto-completio	n support: auto-complete, company and hippie-expand.
<u>∑ Bookmarks</u>	<f11> ' <f3></f3></f11>	Customize Emacs bookmark group which includes: bookmark and bm.	
<u> </u>	<f11> b <f3></f3></f11>	Customize Emacs support for buffer management: Buffer-menu, buffer, minibuffer, hexl, nhexl.	
<u>∑ Comments</u>	<f11> ; <f3> 1</f3></f11>	Customize Emacs support for comments: comment, hideshow.	
Customization Control	<f11> <f2> <f3></f3></f2></f11>	Customize Emacs customization of	control.
∑ Hide/Show	<f11> ; <f3> 2</f3></f11>	Customize Emacs support for con	nments: comment, hideshow.
Input Completion: <u>∑ Completion/Input</u>	<f11> <f2> P M-c</f2></f11>	(pel-cfg-pkg-completion &optional OTHER-WINDOW)	Customize Emacs Input Completion support: helm, ido, ivy, counsel • If OTHER-WINDOW is non-nil (use C-u), display in other window.
<u> ∑ Cursor</u>	<f11> m <f3></f3></f11>	Customize Emacs support for curs	sor and multiple-cursors.
<u>∑ Diff & Merge</u> - ediff	<f11> d e <f3></f3></f11>	Customize Emacs ediff.	
<u>∑M Dired</u>	<f11> f <f3> 2</f3></f11>	Customize Emacs support for dire	d, directory editor. Other choices are available for neotree and ztree.
<u>∑ Enriched Text</u>	<f11> t e <f3></f3></f11>	Customize Emacs Enriched Text s	upport.
∑ File-mngt	<f11> f <f3> 1</f3></f11>	Customize Emacs support for file	management.
<u>∑ File-mngt</u> - auto- revert	<f11> f r <f3></f3></f11>	Customize Emacs support for file automatic revert management.	
∑ File-mngt - ffap	<f11> f a <f3></f3></f11>	Customize Emacs support for management of ffap (find file at point).	
∑ Filling/Justification	• <f11> t f <f3> • <f11> t j <f3></f3></f11></f3></f11>	Customize Emacs fill and justification control.	
∑ Grep	<f11> g <f3></f3></f11>	Customize Emacs grep support. Groups: grep, ag, rg, ripgrep, wgrep.	
<u>∑ Highlight</u>	<f11> b h <f3></f3></f11>	Customize Emacs support for buffer highlight management: auto-highlight, edit, rainbow-delimited, line, fill-column-indicator	
	<f11> <tab> <f3></f3></tab></f11>	(for Emacs version earlier than 27.1) Customize Emacs indentation. Opens the indent customization group.	
∑ Inserting Text ☐	<f11> i <f3></f3></f11>	Customize Emacs indentation. Opens the indent customization group. Customize Emacs text insertion support: lice, smart-dash, tempo, time-stamp, yasnippet	
∑ Keyboard Macros	<f11> k <f3></f3></f11>	Customize Emacs text insertion support: lice, smart-dash, tempo, time-stamp, yashippet Customize the Emacs keyboard macro external package support: kmacro, centimacro.	
∑ Keyboard Macros	<f11> k e <f3></f3></f11>	Customize the Emacs keyboard macro external package support: kmacro, centimacro. Customize the Emacs keyboard macro external package support: emacros.	
∑ Keyboard Macros	<f11> k 1 <f3></f3></f11>	Customize the Emacs keyboard macro external package support: emacros. Customize the Emacs keyboard macro external package support: elmacro.	
Line Mngt: Display - Lines	<f11> 1 <f3></f3></f11>	Customize Emacs support for visual-line.	
<u>∑ Menus</u>	<f11> <f10> <f3></f3></f10></f11>	Customize Emacs menu mechanis	sms.
<u>Navigation</u>	<f11> <f2> P n 2</f2></f11>	(pel-cfg-pkg-navigation &optional OTHER-WINDOW)	Customize Emacs navigation tools support: avy. • If OTHER-WINDOW is non-nil (use C-u), display in another window.
<u></u> Frames	<f11> F <f3></f3></f11>	Customize Emacs frame managen	nent support.
