PEL Key Maps

		PEL Ney Maps			
<u>Operation</u>	<u>Keystroke</u>	Key Map	Note		
Emacs Key Bindings	Emacs has a large set of key b		ally in order the letter (s) in the growing buffer.		
See also: <u>Name Modifier Keys</u>	 Some commands are bound to single keys like the a key which normally inserts the letter 'a' in the current buffer. Some commands are bound to functions keys like <f1> or use key modifiers like C-a or M-a. See Modifier Keys for more info.</f1> Some commands are bound to longer key sequences lie C-x s. The first key, or the first set of keys, can be used as an Emacs key prefix. And then several other keys can follow, all under that prefix. The pref creates some sort of scope: the key-map under that prefix. There's really no limit to the way you can combine keys, the modifier keys, with or without short or longer key prefixes. On top of that you can have key bindings that are global, always accessible if the related code was loaded, or local, only available while a specific major or minor mode is activated inside a specific buffer. All of this provides great flexibility. But it makes Emacs more difficult to learn: you need to remember all the keys. 				
PEL Key maps	Although PEL itself adds a large amount of keys to what's already in Emacs, it leaves most Emacs key binding intact and mainly uses the function keys organized under a tree of key prefixes, trying to provide easy-to-remember key prefixes.				
See also: <u>Keys - Fn</u>	 PEL key bindings are accessible from Emacs running in graphics mode and in terminal mode (you may have to configure your termcap terminal software to support ASNI key sequences for function and cursor keys). By default, PEL also activates the which-key external package which allows you to see all command key bindings for each key prefix in the echo area at the bottom of your Emacs screen. PEL provides documentation of the Emacs and PEL key bindings, organized in topics inside PEL files such as this one. All PEL key prefix groups provide a <f1> key binding to a command that opens a local copy of a PDF file describing the topic. To open this PDF file from Emacs using PEL, just type <f11> <f1> key is the most often used PEL global key prefix. Inside its group the <f1> key opens this file.</f1></f1></f11></f1> 				
	This page lists PEL's key maps. Column 1, the title column, shows the name of the PEL specific PDF page and it's also a link to the Github hosted pdf page. Column 2 shows the key sequence for the topic. Column 3 shows the name of PEL key prefix for the topic.				
	Some topics do not have common PDF tables. These are listed file		ey map, but the commands and keys are described inside topic specific		
	Firefox will open the PDF files and will render it inside the browser page instead of downloading it. This is a great way to navigate through the various links if you are online. For other browsers, you may have to install pdf rendering plugins to do the same.				
Topics with no PEL key maps	The following topics do not have a PEL topic-specific key-map. You can use the <f11> ? p key sequence and enter the topic name to open the file. The command support tab completion. See <u>Y Help/Info</u></f11>				
<u>≻Legend</u>	Describes all conventions and symbols used in the PEL PDF files.				
M AsciiDoc	AsciiDoc support	AsciiDoc support			
∑ Autosave/Backup	Emacs commands for autosav	Emacs commands for autosave and backup control			
∑ Case Conversions	Commands for case conversion of text.				
∑ Closing/Suspending	Commands to close or suspend Emacs.				
∑ Completion/Input	Commands to complete user in	Commands to complete user input at prompts.			
<u>∑M CUA</u>	CUA mode commands.				
∑ Enriched Text	Commands that support the enriched text concept.				
<u>¥ ERT</u>	Emacs Lisp unit testing commands.				
∑ Faces/Fonts	Commands that control Emacs faces and fonts.				
<u> </u>	Commands to enable/disable key chords (typing 2 normal keys together to invoke a command).				
<u>■Keys - Fn</u>	Table that shows the way PEL uses function keys.				
M Outline/Org-Mode	Org-mode commands.	Org-mode commands.			
<u> </u>	Describes Emacs modifier keys	s and ways of describing keys in Emacs.			
<u>∑ Mouse</u>	Mouse commands. Available b	both in graphics and terminal modes.			
<u>Narrowing</u>	Narrowing commands. A way	Narrowing commands. A way to narrow your view to only a portion of the current buffer, protecting the rest of the buffer from any modification.			
∑ Navigation	The navigation commands ava	The navigation commands available in Emacs with the additions provided by PEL and other packages.			
<u>∑</u> Numkeypad	Describes the way the numeric	al keypad is handled in Emacs.			
<u></u> Packages	Commands to download and n	Commands to download and manipulate external packages.			
<u>∑ Rectangles</u>	Commands to manipulate recta	angle areas of text inside a buffer.			
∑ Semantic	Planned topic	Planned topic			
∑ SyntaxCheck	Planned topic

<u>Operation</u>	<u>Keystroke</u>	Key Map	Note
Major mode specific key			_
maps	PEL provides a set of global key-maps that are specific to major modes for markup and programming languages. The key maps have 2 set of bindings. • One set has a key prefix that uses <f11> SPC followed by a key identifying the language. • The other set is only available inside buffers that use the specific major mode and they all use the same <f12> key prefix, simulating a local mode prefix. • The following list is ordered by programming languages names (sorting all Lisp under L) and then listing the markup languages after.</f12></f11>		
ழு€- AppleScript	<f11> SPC a <f12></f12></f11>	pel:for-applescript	g an Elop and to E and another morning and market ranguaged actor.
