## **RPM Files Management & Decoding Support**

Description	<u>Keystroke</u>	Function	Note		
RPM Package Manager Files  • Edit .rpm files  • Edit RPM .spec file	The following external package provides the ability to work with Linux RPM package and specification files. PEL supports the following:  The <a href="mailto:archive-rpm">archive-rpm</a> external package,  This mode provides the ability to open a .rpm file to display its meta data and each of the compressed files.  The <a href="mailto:rpm-spec-mode">rpm-spec-mode</a> external package, activated by <a href="mailto:pel-use-rpm-spec-mode">pel-use-rpm-spec-mode</a> user-option set to t.  This implements a major-mode for the RPM .spec files: it provides coloration and navigation commands.  See Even though the RPM package Manager is mostly used under Linux, the packages here can be used under other Unix-like operating systems.				
Open this PDF file. See also: <u>∑ Help/Info</u>	<f11> SPC M-R <f1></f1></f11>	(pel-help-pdf &optional OPEN-WEB-PAGE)	Open the <u>E Grep</u> local PDF. If the prefix argument (like <b>C-u</b> or <b>M</b> ) is used, then it opens the remote GitHub hosted raw PDF instead. If the <b>pel-flip-help-pdf-arg</b> user-option is set it's the other way around.		
Customize RPM Support See also: <u>© Customize</u>	<f11> SPC M-R <f2></f2></f11>	(pel-customize-pel &optional OTHER-WINDOW)	Customize PEL rpm support. Use it to activate/de-activate various grep tools.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in other window.		
Customize Emacs Grep Support See also: <u>S</u> Customize	<f11> SPC M-r <f3></f3></f11>	(pel-customize-library &optional OTHER-WINDOW)	Customize Emacs grep support. Group: rpm-spec		
Editing .rpm files	Requires the archive-rpn	Requires the <u>archive-rpm</u> external package, 🛃 activated by <b>pel-use-archive-rpm</b> user-option set to <b>t</b> .			
Help - summary of available commands	• ? • h • C-h m • <f1> m • <f11> ? k m</f11></f1>	(describe-mode &optional BUFFER)	Display documentation of current major mode and minor modes.		
Mark file for later command	m	(archive-mark P)	In archive mode, mark this member for group operations.  • With a prefix argument, mark that many members.  • Use M-x archive-unmark-all-files to remove all marks.		
Unmark file	u	(archive-unflag P)	In archive mode, un-mark this member if it is marked to be deleted.  • With a prefix argument, un-mark that many files forward.		
	a	(archive-alternate-display)	Toggle alternative display.  To avoid very long lines archive mode does not show all information.  This function changes the set of information shown for each files.  It is does not seem to work.		
View current file	v	(archive-view)	View the file of the current line. No change allowed.		
Open current file	• e • f • RET	(archive-extract &optional OTHER-WINDOW-P EVENT)	Extract this entry of the archive into its own buffer.  • Modifications are allowed <b>but</b> saving them does not work		
Open current file in other window	• E • o	(archive-extract-other-window)	In archive mode, find (open) this file member in another window.		
Copy file(s) to specified directory	С	(archive-copy-file FILES NEW-NAME)	Copy FILES to a location specified by NEW-NAME.  Copy current file, prompting for destination.  If several files are marked, copy them all to the destination directory.		
Change group for marked files	G	(archive-chgrp-entry NEW-GID)	Change the group of all marked or this member.  1 this does not seem to work.		
Change mode	М	(archive-chmod-entry NEW-MODE)	Change the protection bits associated with all marked or this member.  The new protection bits can either be specified as an octal number or as a relative change like "g+rw" as for chmod(2).  At this does not seem to work.		
Change owner	0	(archive-chown-entry NEW-UID)	Change the owner of all marked or this member.  1. this does not seem to work.		
Mark file for deletion	• d • C-d	(archive-flag-deleted P &optional TYPE)	In archive mode, mark this member to be deleted from the archive.  • With a prefix argument, mark that many files.		
Delete all files marked for deletion	x	(archive-expunge)	After prompting for confirmation, delete all files marked for deletion.		
Navigate in RPM-Archive buffer	The following commands select a new file line in the buffer.				
Move down one line	• SPC • n • C-n • <down></down>	(archive-next-line P)	Down one line.  • With numeric prefix argument, move down that many lines.		
Move up one line	• S-SPC • p • C-p • <up></up>	(archive-previous-line P)	Up one line.  • With numeric prefix argument, move up that many lines.		
Move to beginning of buffer	• < • M-<	(beginning-of-buffer &optional ARG)	Move point to the beginning of buffer.		
Move to end of buffer	• > • M->	(end-of-buffer &optional ARG)	Move point to the end of buffer.		
Refresh buffer	g	(revert-buffer &optional IGNORE-AUTO NOCONFIRM PRESERVE-MODES)	Refresh buffer.		
Quit	q	(quit-window &optional KILL WINDOW)	Quit Rpm-Archive and bury the window.
