Customizing Emacs with PEL

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>	
PEL: Control Emacs		et going quickly with Emacs. Instea	d of having to write Emacs Lisp code, you use Emacs easy-to-use	
via Easy Customization	customization system. This table shows how to quickly gain access to the customized data using commands that open buffers that show the customized data inside buffers that operate in the Customize mode with special key bindings to speed up operation in that mode. The first section shows navigation commands available inside a buffer that shows customized data (also called user options). The later sections show commands that you can use to open buffers in Customization Mode to manage user options of interest.			
	The "pel-use-" activation only when you need then Once a package or feature.	of customization groups and user of user options identify what built-in on. This way your Emacs will start que is activated with the "pel-use-" use-"	option variables that control several aspects of Emacs: or external Emacs Lisp package to use. PEL has logic to autoload the packages uickly even if you have identified a large number of packages. ser option, the other options control different behaviour of the activated package -init. PEL will activate the new configuration.	
Open this PDF file. See also: <u>∑ Help/Info</u>	<f11> <f2> <f1></f1></f2></f11>	(pel-help-pdf &optional OPEN- WEB-PAGE)	Open the local copy of the <u>S Customize</u> PDF file unless a command prefix (like C-u) was used. In that case it opens the Github-hosted file instead.	
Customization Data	By default Emacs stores the customization data inside the Emacs init.el file, along with your other configuration, as Lisp code inside a custom-set-variable form. • When using PEL, and perhaps even if you're not, it's best to have Emacs store this data inside a <i>separate file</i> that you can put under VCS control independently from your init.el file. PEL promotes storing it inside the file ~/.emacs.d/emacs-customization.el . • Store the following Emacs Lisp code snippet inside your init.el file to do so:			
	(setq custom-file "~/.emacs.d/emacs-customization.el") (load custom-file) • When using PEL, that code must be located before the call to pel-init. The use of a file to stare Emacs customization data asserts from the Emacs init al file provides prother degree of freedom and flexibility. It			
	• The use of a file to store Emacs customization data separate from the Emacs init.el file provides another degree of freedom and flexibility. becomes possible to easily distribute a configuration to several computers (or even users) without sharing more private information that c kept inside the init.el file.			
Customize Mode	This section describes comma commands described in the se	,	Customize-mode showing the various user options you got access to using the	
Move to Avy/Ace target See also: <u></u> Navigation	0	(ace-link-custom)	 Highlight each target with an Avy/Ace single or double letter target. Type the letter(s) to move to that position. This is a very efficient and quick navigation mechanism. Requires ace-link external package PEL downloads, installs and activates it when the pel-use-ace-link user option is set to t. 	
Apply customization changes	C-c C-c	(Custom-set &rest IGNORE)	Set the current value of all edited settings in the buffer.	
Apply and Save customization changes	C-x C-s	(Custom-save &rest IGNORE)	Set all edited settings, then save all settings that have been set. • If a setting was edited and set before, this saves it. If a setting was merely edited before, this sets it then saves it.	
Quit Customization and close buffer	ď	(Custom-buffer-done &rest IGNORE)	Exit current Custom buffer according to 'custom-buffer-done-kill'.	
Browse customize data tree	The following commands create a tree browser for the customize hierarchy inside a *Customize Browser* buffer. Each node can we expanded down to a single options and any can be collapsed. Note that PEL's customization groups and options are all always available contrary to the ones that will be available in the Emacs group because the Emacs group contains only what is currently loaded and the PEL one is always loaded.			
Browse complete customize data tree from root: Emacs	<f11> <f2> B</f2></f11>	(customize-browse &optional GROUP)	Open the customize tree bowser for the entire Emacs customization data already loaded. Lemacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible.	
Browse PEL customize data tree	<f11> <f2> P B</f2></f11>	(pel-customize-browse)	Open the customize tree bowser for the entire PEL customization data (which is under Emacs/Convenience.	
Emacs Easy Customization	With the following command you can gain access to the Customize-mode to customize anything of interest. With the first command you open the customization buffer and then you can search or browse what you want to customize. The second command allow you to open the buffer at a specific customization group and the third one at a specific user option. These commands prompt for the information you are looking for. You can always use completion by typing <f2> g, this will also open the grep group, the rg and ripgrep groups if they are loaded. Each group will open inside its own bugger and the command will create the necessary windows. If Until a package is loaded its customization group is unknown to Emacs and no buffer will be opened for it. To see the customization group, first load the package via one of its command that is auto-loaded or load it explicitly. Whote however that the PEL commands that open customization groups attempt to identify the library where the customization group is defined and will prompt you to load the related library to enable access to the customization group. The groups accessible via the PEL commands are limited to what PEL s</f2>			
Customize Emacs	<f11> <f2> c</f2></f11>	(customize)	Select a customization buffer which you can use to set user options. User options are structured into "groups". Initially the top-level group 'Emacs' and its immediate subgroups are shown; the contents of those subgroups are initially hidden. Emacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible.	
Customize a specific group	<f11> <f2> g</f2></f11>	(customize-group &optional GROUP OTHER-WINDOW)	Customize GROUP, which must be a customization group. • If OTHER-WINDOW is non-nil (use C-u), display in another window. • This command provides completion and you can use it to detect groups. • Emacs is only able to show the name names of groups that are defined in files that have already been loaded. You won't be able to open a group that is not already loaded.	
Customize a user option	<f11> <f2> o</f2></f11>	(customize-option SYMBOL)	Customize SYMBOL, which must be a user option. As with groups, Emacs provides completion for user options, allowing you to detect user options. Emacs is only able to show the name names of user options that are defined in files that have already been loaded. You won't be able to open a group that is not already loaded.	

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>
Input Completion Mode	PEL supports several input cor	mpletion modes that kick in with the	e M−x, C−x b, C−x C−f, <f1> o and many other commands. PEL supports</f1>
Selection	the following input completion 1. Emacs' default tab con		
0	2. Pelm mode comple		I-use-helm to t.
See also: Completion/Input	3. <u>Ido mode</u> completion	on : 🛂 set pe l	I-use-ido to t
	4. V Ivy mode completic		I-use-ivy to t
		on with Counsel mode : 🛂 set pe	
	 ldo/Helm mode where Ido is used for dealing with Files and buffers and Helm is used everywhere else (including all Helm specific commands). 		
	00		
		to customize the PEL completion	group user options above. hich completion mode is used when Emacs starts.
	·	·	' '
		mpletion mode is activated via the detion mode and to see which one is	corresponding pel-use- user option, PEL makes the following commands currently active.
Select the completion mode	<f11> M-c</f11>	(pel-select-completion-mode)	Prompt user for completion mode to activate. The available modes depend on
			what is currently activated by customization. See the list above.
Show what completion mode is currently used.	<f11> ? M-c</f11>	(pel-show-active-completion- mode)	Display the completion mode currently used.
Search Tools Selection	PEL supports several search to	ools that impact the way the C-s co	pmmand operates. PEL supports the following search tools:
Search 100is Selection	Emacs' default ISearch		of inflated operated. The Supports the following Search tools.
See also:	• Manzu, ISearch with ma		
∑ Search/Replace	• Swiper search with ov	verview match list : det pel-us customize the PEL completion grou	
	Set the pel-initial-search	-tool user option to select which se	earch tool is used when Emacs starts.
		arch tool is activated via the corresp och tool and to see which one is cur	conding pel-use- user option, PEL makes the following commands available to rently active.
Show which search tool is	<f1> ? s</f1>	(pel-show-active-search-tool)	Display the currently used search tool.
currently used			
Select search tool to use	<f11> s s</f11>	(pel-select-search-tool)	Prompt user for search tool to use with C-s . Show new active one. • Emacs normally maps the search-forward command to C-s .
			PEL provides the ability to activate the following tools that can be activated
			for searching: • • The Anzu external package activated by pel-use-anzu user option.
			Anzu provides a match count in the modeline when search command is
			used. • ** The Swiper external package ** activated by pel-use-swiper user
			option. Swiper is not using isarch-forward; it shows a list of matching lines
			in the mini-buffer.
			• \$\ Use the <f11> s <f2> command to open the PEL search customize group and set the pel-initial-search-tool user option to identify which tool</f2></f11>
			is used when Emacs starts.
			Swiper helps as they are both very useful in different scenarios.
Customize PEL support	The following commands open	s the Emacs customization group re	elated to a PEL topic. Most of these commands do not prompt; they open the
	customization buffer at the req		pan the quetemization groups related to the appoint feature
		· · · · · · · · · · · · · · · · · · ·	pen the customization groups related to the specific feature. ssion, execute M-x pel-init after you saving and applying the customized
