Elm		No		Yes			
Emacs Lisp	Yes	Yes	via CTags	Yes		<ul> <li>etags supports Emacs Lisp and C, the 2 programming languages used by Emacs.</li> <li>creates a TAGS file</li> <li>etags can create a TAGS file for files in several directory trees, with files in .gz files.</li> <li>tools:</li> <li>etags-el: create TAGS file for 1 directory</li> </ul>	etags
Erlang	Yes	Yes	via CTags	Yes		etags and ctags produce the same results.     PEL provides the <u>etags-erl</u> script that supports both but uses etags by default. It also creates tags for Erlang and C files.	etags comes with Emacs and does not require extra installation of Universal CTags. It's easy to use.
						also creates tags for Enang and Cilies.	gtags/global create larger files but provide more features if you are willing to learn global command line.
F#	Yes					also creates tags for Linding and Cillies.	provide more features if you are willing
F#	Yes	No		Yes		also creates tags for Enang and Cilles.	provide more features if you are willing
Falcon		No		Yes		also creates tags for Enang and C lines.	provide more features if you are willing
Falcon Faust	Yes	No		Yes		also creates tags for Enang and C lines.	provide more features if you are willing
Falcon Faust Fennel						also creates tags for Enang and C lines.	provide more features if you are willing
Falcon Faust Fennel Flex	Yes	No		Yes		also creates tags for Enang and C lines.	provide more features if you are willing

fast-tags	Haskell							

# PEL script Tools to help with tag creation programs

Tool	PEL Tool	Description
GNU Global gtags with ggtags	envfor-gtags	A shell script that must be sourced: add an alias to turn this into a shell command. I call the alias: use-gtags  It sets up environment variables required by gtags.  You will have to update it to conform to your environment.  Run it before issuing the gtags command to create the Global tag files.  Unlike etagcs/ctags, gtags creates 3 files that can then be used on the command line by the global command line tool which provides a large set of searching capabilities. Inside Emacs the Global database is accessed via the ggtags Emacs external package. But you can also learn global command line and use it from the command line to perform more complex operations.  From within Emacs access global man page with <f11>? m global RET</f11>
<u>etags</u>	etags-c	Build a etags TAGS file for C source code files.  • Type it without arguments to get help.
	etags-cpp	Build a etags TAGS file for C++ source code files.  • Type it without arguments to get help.
	etags-el	Build a etags TAGS file for Emacs Lisp source code files.  • Type it without arguments to get help.
	etags-erl	Build a etags TAGS file for Erlang source code files.  • Type it without arguments to get help.
	etags-lisp	Build a etags TAGS file for Common Lisp source code files.  • Type it without arguments to get help.
	etags-py	Build a etags TAGS file for Python source code files.  • Type it without arguments to get help.

Tool	PEL Tool	Description
Universal Ctags	To use them with Univ	nmands also support the Universal CTags.  versal CTags set the ETAGS_USE_UCTAGS environment variable in the shell before running the etags-XX command.  t ability to set the environment variable for the duration of the next command you can issue the command like this at the root ide directory tree:
	ETAGS_USE_UCTA	AGS=1 etags-py .

#### xref-backend-functions

		local	Global	
С	c-mode		etagsxref-backend	With nothing activated
			dumb-jump-xref-activate     etagsxref-backend	With pel-use-dumb-jump = t
		ggtagsxref-backend     t	etagsxref-backend	with ggtags-mode active in buffer
Duthon			• stage weet beakend	With nothing activated
Python			etagsxref-backend	With nothing activated
		<ul><li>ggtagsxref-backend</li><li>t</li></ul>	etagsxref-backend	with ggtags-mode active in buffer
Erlang		<ul><li>erlang-etagsxref-backend</li><li>t</li></ul>	etagsxref-backend	With nothing activated
		ggtagsxref-backend     erlang-etagsxref-backend     t		with ggtags-mode active in buffer. Tested a little on jabbed source, but could not get many hits.
Rust	rust-mode		etagsxref-backend	With nothing activated
		ggtagsxref-backend     t	etagsxref-backend	with ggtags-mode active in buffer
Javascript	js-mode		etagsxref-backend	With nothing activated
				with ggtags-mode active in buffer
