Perl 5 Syntax 🚧

Perl 5 Operators	Perl has a large number of operators, listed below with the Note: • <u>C Operators missing from Perl</u> : unary &, unary * and (ty • <u>Quote and Quote-like operators</u> : in Perl quotes are ope	
Associativity: one of: right left NA : not associative: cannot use more than one of these operators in sequence. CH: chained	left terms and list operators (leftward) left Arrow Operator: -> NA Auto-increment and Uato-decrement: ++ - right Exponentiation: ** right Symbolic Unary Operators: ! - left Binding operators: ! - left Multiplicative Operators: * / left Additive Operators: + - left Shift Operators: left Shift Operators: NA named unary operators NA Class instance Operator: isa CH Relational Operators: left. Bitwise And:	\ and unary + and - % x . >>> <= >= 1t gt le ge eq ne <=> cmp ^ ^.
File test operators	t is possible to combine the file test operator with the AND operator as in the following example: if (-e \$fname && -f _ && -r _){ print("\$fname exists and is readable\n"); }	
The most important operators are shown here. They check if the file	 -x is executable -s has -o is owned by effective uid. -f is a -R is readable -d is a -W is writable -l is a -X is executable -p is a 	ts. npty. nonzero size (returns size in bytes). plain file. directory. symbolic link. named pipe (FIFO) or Filehandle is a pipe. socket. -b is a block special filet handle is opened to a tty. has setuid bit set. has setgid bit setk has sticky bit set. is an ASCII text file (heuristic guess). is a "binary" file (opposite of -T).
