## **Customizing Emacs with PEL**

<u>Operation</u>	<u>Keystroke</u>	Function	Note
PEL: Control Emacs	-		d of having to write Emacs Lisp code, you use Emacs easy-to-use
via Easy Customization	customization system.  This table shows how to quickly gain access to the customized data using commands that open buffers that show the customized data inside buffers that operate in the Customize mode with special key bindings to speed up operation in that mode.  The first section shows navigation commands available inside a buffer that shows customized data (also called user options).  The later sections show commands that you can use to open buffers in Customization Mode to manage user options of interest.		
	PEL - Configuration through Customization  PEL provides a growing set of customization groups and user option variables that control several aspects of Emacs:  The "pel-use-" activation user options identify what built-in or external Emacs Lisp package to use. PEL has logic to autoload the packages only when you need them. This way your Emacs will start quickly even if you have identified a large number of packages.  Once a package or feature is activated with the "pel-use-" user option, the other options control different behaviour of the activated package.  Once you have modified the configuration, execute M-x pel-init. PEL will activate the new configuration.		
Open this PDF file. See also: <u>N Help/Info</u>	<f11> <f2> <f1></f1></f2></f11>	(pel-help-pdf &optional OPEN-WEB-PAGE)	Open the local copy of the <u>S Customize</u> PDF file unless a command prefix (like <b>C-u</b> ) was used. In that case it opens the Github-hosted file instead.
Customization Data	By default Emacs stores the customization data inside the Emacs init.el file, along with your other configuration, as Lisp code inside a <b>cust set-variable</b> form.  • When using PEL, and perhaps even if you're not, it's best to have Emacs store this data inside a <i>separate file</i> that you can put under VCS control independently from your init.el file. PEL promotes storing it inside the file ~/.emacs.d/emacs-customization.el .  • Store the following Emacs Lisp code snippet inside your init.el file to do so:  (setq custom-file "~/.emacs.d/emacs-customization.el") (load custom-file)  • When using PEL, that code must be located before the call to pel-init.  • The use of a file to store Emacs customization data separate from the Emacs init.el file provides another degree of freedom and flexibility becomes possible to easily distribute a configuration to several computers (or even users) without sharing more private information that of kept inside the init.el file.		
Customize Mode	This section describes comma commands described in the se		Customize-mode showing the various user options you got access to using the
Move to Avy/Ace target See also: Navigation	o	(ace-link-custom)	<ol> <li>Highlight each target with an Avy/Ace single or double letter target.</li> <li>Type the letter(s) to move to that position.</li> <li>This is a very efficient and quick navigation mechanism.</li> <li>Requires ace-link external package 2 PEL downloads, installs and activates it when the pel-use-ace-link user option is set to t.</li> </ol>
Apply customization changes	C-c C-c	(Custom-set &rest IGNORE)	Set the current value of all edited settings in the buffer.
Apply and Save customization changes	C-x C-s	(Custom-save &rest IGNORE)	Set all edited settings, then save all settings that have been set.  • If a setting was edited and set before, this saves it. If a setting was merely edited before, this sets it then saves it.
Quit Customization and close buffer	q	(Custom-buffer-done &rest IGNORE)	Exit current Custom buffer according to 'custom-buffer-done-kill'.
Browse customize data tree	The following commands create a tree browser for the customize hierarchy inside a *Customize Browser* buffer. Each node can we expanded down to a single options and any can be collapsed. <b>Note</b> that PEL's customization groups and options are all always available contrary to the ones that will be available in the Emacs group because the Emacs group contains only what is currently loaded and the PEL one is always loaded.		
Browse complete customize data tree from root: Emacs	<f11> <f2> B</f2></f11>	(customize-browse &optional GROUP)	Open the customize tree bowser for the entire Emacs customization data already loaded.  • Unfortunately this command does not prompt it always opens the tree from the root. To specify a group use the command shown below.  • Emacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible.
Browse customize data tree from specified group	<f11> <f2> b</f2></f11>	(pel-browse-group GROUP)	Browse the customization tree from a specific group node.  • Prompts for a group name. Supports tab completion.  • All PEL groups have a name that starts with "pel-".  Lemacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible. All of PEL data is always loaded.
Browse PEL customize data tree	<f11> <f2> P B</f2></f11>	(pel-customize-browse)	Open the customize tree bowser for the entire PEL customization data (which is under Emacs/Convenience.
Emacs Easy Customization	With the following command you can gain access to the Customize-mode to customize anything of interest. With the first command you open the customization buffer and then you can search or browse what you want to customize. The second command allow you to open the buffer at a specific customization group and the third one at a specific user option. These commands prompt for the information you are looking for. You car always use completion by typing <tab> at any point to get a list of available groups or variables.   Several of the commands below open the PEL customization group and one or several other groups related to the same topic, when these groups are already loaded.   If you set the OTHER-WINDOW argument, the command open s the buffer in another window and also open any group related that exists. For example if you open the PEL group for grep with C-u <f11> <f2> g, this will also open the grep group, the rg and ripgrep groups if they are loaded. Each group will open inside its own bugger and the command will create the necessary windows.   Intil a package is loaded its customization group is unknown to Emacs and no buffer will be opened for it. To see the customization group, first load the package via one of its command that is auto-loaded or load it explicitly.   Note however that the PEL commands that open customization groups attempt to identify the library where the customization group is defined and will prompt you to load the related library to enable access to the customization group. The groups accessible via the PEL commands are limited to what PEL supports.</f2></f11></tab>		
Customize Emacs	<f11> <f2> c</f2></f11>	(customize)	Select a customization buffer which you can use to set user options.  User options are structured into "groups".  Initially the top-level group 'Emacs' and its immediate subgroups are shown; the contents of those subgroups are initially hidden.  Emacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible.
Customize a specific group	<f11> <f2> g</f2></f11>	(customize-group &optional GROUP OTHER-WINDOW)	Customize GROUP, which must be a customization group.  • If OTHER-WINDOW is non-nil (use C-u), display in another window.  • This command provides completion and you can use it to detect groups.  Lemacs is only able to show the name names of groups that are defined in files that have already been loaded. You won't be able to open a group that is not already loaded.
Customize a user option	<f11> <f2> o</f2></f11>	(customize-option SYMBOL)	Customize SYMBOL, which must be a user option.  • As with groups, Emacs provides completion for user options, allowing you to detect user options.  • Emacs is only able to show the name names of user options that are
			defined in files that have already been loaded. You won't be able to open a group that is not already loaded.

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>
		(customize-set-variable VARIABLE VALUE &optional COMMENT)	Set the default for VARIABLE to VALUE, and return VALUE. VALUE is a Lisp object. If VARIABLE has a 'custom-set' property, that is used for setting VARIABLE, otherwise 'set-default' is used. If VARIABLE has a 'variable-interactive' property, that is used as if it were the arg to 'interactive' (which see) to interactively read the value. If VARIABLE has a 'custom-type' property, it must be a widget and the ':prompt-value' property of that widget will be used for reading the value. If given a prefix (or a COMMENT argument), also prompt for a comment.
		(set-variable VARIABLE VALUE & optional MAKE-LOCAL)	Set VARIABLE to VALUE.  VALUE is a Lisp object.  VARIABLE should be a user option variable name, a Lisp variable meant to be customized by users. You should enter VALUE in Lisp syntax, so if you want VALUE to be a string, you must surround it with doublequotes.  VALUE is used literally, not evaluated.  If VARIABLE has a 'variable-interactive' property, that is used as if it were the arg to 'interactive' (which see) to interactively read VALUE.  If VARIABLE has been defined with 'defcustom', then the type information in the definition is used to check that VALUE is valid.  Note that this function is at heart equivalent to the basic 'set' function.  For a variable defined with 'defcustom', it does not pay attention to any :set property that the variable might have (if you want that, use M-x customize-set-variable instead).  With a prefix argument, set VARIABLE to VALUE buffer-locally.
Input Completion Mode	PEL supports several input com		M-x, C-x b, C-x C-f, <f1> o and many other commands. PEL supports</f1>
Selection  See also:  Completion/Input	1. Emacs' default tab com 2. Helm mode completion 3. Ido mode completion 4. Vy mode completion 5. Vy mode completion 6. Ido/Helm mode when commands).	pletion tion : 4 set pel on : 2 set pel n with Counsel mode : 3 set pel	and buffers and Helm is used everywhere else (including all Helm specific
			hich completion mode is used when Emacs starts.
		mpletion mode is activated via the ortion mode and to see which one is	corresponding pel-use- user option, PEL makes the following commands currently active.
Select the completion mode	<f11> M-c</f11>	(pel-select-completion-mode)	Prompt user for completion mode to activate. The available modes depend on what is currently activated by customization. See the list above.
Show what completion mode is currently used.	<f11> ? M-c</f11>	(pel-show-active-completion-mode)	Display the completion mode currently used.
Search Tools Selection  See also:  Search/Replace	PEL supports several search tools that impact the way the C-s command operates. PEL supports the following search tools:  • Emacs' default ISearch  • Manzu, ISearch with match count  • Swiper search with overview match list  • Swiper search with overview match list  • Set the pel-initial-search-tool user option to select which search tool is used when Emacs starts.  As soon as one of the extra search tool is activated via the corresponding pel-use- user option, PEL makes the following commands available to change the currently used search tool and to see which one is currently active.		
Show which search tool is	<f1> ? s</f1>	(pel-show-active-search-tool)	Display the currently used search tool.
Select search tool to use	<f11> s s</f11>	(pel-select-search-tool)	Prompt user for search tool to use with C-s. Show new active one.  • Emacs normally maps the search-forward command to C-s.  • PEL provides the ability to activate the following tools that can be activated for searching:  • The Anzu external package activated by pel-use-anzu user option. Anzu provides a match count in the mode line when search command is used.  • The Swiper external package activated by pel-use-swiper user option. Swiper is not using isarch-forward; it shows a list of matching lines in the mini-buffer.  • The Swiper external package carried activated by pel-use-swiper user option. Swiper is not using isarch-forward; it shows a list of matching lines in the mini-buffer.  • The Swiper external package carried activated by pel-use-swiper user option. Swiper is not using isarch-forward; it shows a list of matching lines in the mini-buffer.  • The Swiper external package carried activated by pel-use-swiper user option. Swiper user option with the mini-buffer.  • The Swiper external package carried activated by pel-use-swiper user option. Swiper user user option with the mini-buffer.  • The Swiper external package carried activated by pel-use-swiper user option. Swiper user user option with the mini-buffer.  • The Swiper external package carried activated by pel-use-swiper user option. Swiper user user option. Swiper user option with the mini-buffer.
Customize PEL support	The following commands opens the Emacs customization group related to a PEL topic. Most of these commands do not prompt; they open the customization buffer at the requested group.		
	If you prefix the following commands with <b>C</b> - <b>u</b> PEL will also open the customization groups related to the specific feature.  To activate any PEL customization change in the current session, execute <b>M</b> - <b>x pel-init</b> after you saving and applying the customized variable. For motion variables that control mode hooks (eg. the flyspell automatic activation for specific major modes), you also need to restart Emacs.		
All PEL	<f11> <f2> P !</f2></f11>	(pel-cfg &optional OTHER-WINDOW)	Customize PEL support.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.
PEL base	<f11> <f2> p</f2></f11>	(pel-customize-pel-base- emacs-group &optional OTHER- WINDOW)	Customize basic PEL configuration: open the <b>pel-base-emacs</b> group.  • If OTHER-WINDOW is non-nil (use <b>C</b> - <b>u</b> ), display in another window.
Customize specific PEL group	The following key bindings almost all use the same PEL command: (pel-customize-pel & optional OTHER-WINDOW). The command detects the key sequence that invoked it to select the customization group to open. If there are more than one it prompts for the one to open. If a group is not loaded, PEL prompts for loading it.  • All of these commands open the buffer inside another window if a prefix argument (like C-u) is typed first.		
<u>∑ Align</u>	<f11> t a <f2></f2></f11>	Customize PEL support for text ali	ignment.
<u>Auto-Completion</u>			
	<f11> , <f2></f2></f11>	Customize PEL auto-completion s	upport: auto-complete, company and hippie-expand.

∑ Spell Checking	<f11> \$ <f2></f2></f11>	Customize PEL support for: spell checking. Identify which major modes will automatically activate either flyspell-mode or flyspell-prog-mode.	
<u>∑ Xref</u> - cross reference	<f11> X <f2></f2></f11>	Customize PEL cross-reference support: ctags/etags/gtags	
<u>&gt; Text Modes</u>	• <f11> t <f2> • <f11> t m <f2< th=""><th colspan="2">Customize PEL text management support.</th></f2<></f11></f2></f11>	Customize PEL text management support.	
∑ Undo/Redo/Repeat/Arg	<f11> u <f2></f2></f11>	Customize PEL undo support.	
<u></u> vcs	<f11> v <f2></f2></f11>	Customize PEL Version Control System support.	
<u></u> Windows	<f11> w <f2></f2></f11>	Customize PEL Window support.	
Yasnippet - <u>∑ Inserting Text</u>	<f11> y <f2></f2></f11>	Customize PEL Yasnippet text insertion support.	
Configure PEL Programming Language support	The following commands opens the Emacs configuration group to configure PEL support for the specified programming language.  You should be able to control most of the important features of the programming languages through these customizations including the activation of important packages as well as aspects of programming language styles like indentation style and width.  The <f11> spc key prefixes are available globally (for all buffers).  The <f12> <f2> key is only available when point is in a buffer for one of the languages supported by PEL and open the PEL customization group for the programming language for the current buffer.  When you use the <f11> spc prefix, you can customize the Emacs language library support that might not even be loaded: PEL will detect if the corresponding library is loaded and will prompt you asking if you want to load it first, allowing Emacs to open the customization buffer.  To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable. Alternatively close and re-start Emacs.</f11></f2></f12></f11>		
AppleScript & text audio narration	<f11> SPC a <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Applescript support.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.
