## **Emacs support for the Seed7 Programming Language**

* Topic Index	Emac	s support for the Seed7 P	rogrammin	g Language
Description	<u>Keystroke</u>	Function		<u>Note</u>
Seed7 Editing  Help & customization Comments Template Expansion Seed7 abbreviations Marking Menu iMenu/Speedbar Outline	PEL supports for the Seed7 programming language uses seed7-mode. PEL also provides useful extensions & utilities that can't be implemented in the major mode.  The seed7-mode external package is installed when the pel-use-seed7 user-option is set to t.  Seed7 files are files with .sd7 and .s7i extensions. The seed7-mode supports: Seed7 code highlighting Insertion of Seed7 bock or line-end comments. Ability to select which type is inserted by comment-swim.  PEL also provides a command to select the comment style allowing easy selection of different styles of multi-line comments, a feature provided by Emacs that PEL uses and provides an easy selection at prompt.  Seed7 code navigation across function and procedures as well to start/end of blocks inside functions/procedure as well as enum and struct.			
Navigation     Xref Navigation     Syntax-aware Indentation     Compilation     Seed7 Information	<ul> <li>imenu support, allowing use of all imenu-based navigation commands and pop-up menus. Identifies callable (functions and procedures), interfaces, enums, structs</li> <li>∑ Speedbar support and top menu with available commands. (see ∑ Menus)</li> <li>Seed7-syntax-aware auto-indentation and auto-fill-mode are supported.</li> <li>Code keyword expansion to Seed7 statements with ability to jump to next field to fill with tempo markers and navigation to those.</li> <li>outline-minor-mode to list the name of Seed7 callables. See ∑ Outline for more information.</li> <li>Invocation of Seed7 compiler tools to perform static analysis or compilation of Seed7 code.</li> </ul>			
Last updated on:	2025-10-09	All PEL functions that extend the seed7-mode have r	names that are shown u	sing <b>light green color</b> . See <u>➤<b>Legend</b></u> for more info.
Open this PDF file. See also: <u>∑ Help/Info</u>	<f11> SPC 7 <f1><f12> <f1></f1></f12></f1></f11>	(pel-help-pdf &optional OPEN-WEB-PAGE)	Open the <u>\$\palset\$1 - Seed7</u> local PDF. If the prefix argument (like <b>C-u</b> or <b>M</b> ) is used, then it opens the remote GitHub hosted raw PDF instead. If the <b>pel-flip-help-pdf-arg</b> user-option is set it's the other way around.	
<u>© Customize</u> PEL Seed7 support	<f11> SPC 7 <f2> <f12> <f2></f2></f12></f2></f11>	(pel-customize-pel &optional OTHER-WINDOW)	Customize PEL Seed7 support.  If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.  Customize Emacs Seed7 support: seed7  If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
∑ Customize Emacs Seed7 support	<f11> SPC 7 <f3> <f12> <f3>         C-c C</f3></f12></f3></f11>	(pel-customize-library &optional OTHER-WINDOW)		
Show seed7-mode version information	C-c v	(seed7-mode-version)	Print `seed7-mode' ve	ersion UTC time stamp.
Show seed7-mode info	• C-h m • <f1> m</f1>	(describe-mode &optional BUFFER)	Display information about the seed7-mode extracted from seed7-mode key-map and docstring. See <u>S Help/Info</u> for more on navigating Emacs help.	
Comments	More are available to inse	ert & manipulate comments, listed in <u>E Comments</u> . So	ome are duplicated here	for convenience. The seed7-mode specific are listed first.
Toggle between Seed7 (* block *) and # line style	C-c ;	(seed7-toggle-comment-style &optional ARG)	Toggle the Seed7 comment style between block and line comments.  Optional numeric ARG, if supplied, switches to block comment style when porto line comment style when negative, and just toggles it when zero or left out.  Note: the default style for all Seed7 buffers is controlled by the `seed7-uses-blocomment' customizable user-option. The default is line style comments.	
Insert, realign, comment/uncomment region With PEL: Comment the current line with	M-;	(comment-dwim ARG)	Insert or realign comment on current line (or region if a region is active).  On a single line, the comment is placed <i>after</i> the code.  If line/region is already commented, uncomment it.  C-u M-; executes comment-kill	
M-O M-;		(pel-comment-dwim ARG)	Same as <b>comment-dwim</b> but comments the current line with a numeric ARG or 0	
Toggle display of comments in buffer or active region See also: ∑ Comments	<f11> ; ;</f11>	(hide/show-comments-toggle &optional START END)	Toggle hiding/showing of comments in the active region or whole buffer.  • If the region is active then toggle in the region. Otherwise, in the whole buffer.  • This requires the <a href="hide-comnt.el">hide-comnt.el</a> package (see <a href="∑ Comments">∑ Comments</a> ). <a href="https://www.dec.ncm.nc.nc.nc.nc.nc.nc.nc.nc.nc.nc.nc.nc.nc.&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;Change comment style for buffer&lt;/td&gt;&lt;td&gt;&lt;f11&gt; ; s&lt;/td&gt;&lt;td&gt;(pel-comment-style &amp;optional CUSTOMIZE)&lt;/td&gt;&lt;td colspan=2&gt;Select a comment style for the buffer: prompts with the list of available styles, showing the currently used one. Apply the choice to the current buffer.  • With C-u prefix, open the customize buffer to control selection of the default comment style for all buffers (the comment-style user option).&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;As of Emacs 30, Emacs supports 8 different comment styles, listed here:&lt;/td&gt;&lt;td colspan=4&gt;Emacs supports several comment styles, as specified by the &lt;b&gt;comment-styles&lt;/b&gt; user-option (which can be modified). Some of these styles only take effect when a region of several lines is comments. By changing the style you can create the boxed comments, for instance and also uncomment the box comment with comment-swim (bound to M-; ) and then change for another comment style in the same buffer.  • The style selected by the command only affects the current buffer. It is not persistent. The persistent setting is the &lt;b&gt;comment-style&lt;/b&gt; user option.  • 0 = plain: Start in column 0 (do not indent), as in Emacs-20  • 1 = indent-or-triple: Start in column 0, but only for single-char starters  • 2 = indent: Full comment per line, ends not aligned  • 3 = aligned: Full comment per line, ends aligned  • 4 = box: Full comment per line, ends aligned, + top and bottom  • 5 = extra-line: One comment for all lines, end on a line by itself  • 6 = multi-line: One comment for all lines, end on last commented line  • 7 = box-multi: One comment for all lines, + top and bottom  The seed7-mode supports a set of code keyword expansion to Seed7 statements with ability to jump to next field to fill with tempo markers and navigation to these&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;Template&lt;br&gt;insertion &amp;&lt;br&gt;expansion&lt;/td&gt;&lt;td colspan=4&gt;fields to complete the template easily.  Code keyword expansion is performed by the seed7-complete-statement-or-indent command, bound to the &lt;tab&gt; key.  To use keyword expansion: type the keyword then type &lt;tab&gt; to expand the keyword into the corresponding code that will be properly indented.  There are 2 groups of supported keywords.  The keywords shown in the first part of the table expand to their corresponding code template when the keyword is the only word on the line and point is placed just after the last keyword character.&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;Top level or block declarations.&lt;/td&gt;&lt;td&gt;inc&lt;/td&gt;&lt;td&gt;include statement  constant declaration&lt;/td&gt;&lt;td&gt;for&lt;br&gt;foru&lt;/td&gt;&lt;td&gt;for statement&lt;br&gt;for-until statement&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;Type the keyword at the&lt;/td&gt;&lt;td&gt;proc&lt;/td&gt;&lt;td&gt;variable declaration procedure declaration&lt;/td&gt;&lt;td&gt;fors&lt;br&gt;fore&lt;/td&gt;&lt;td&gt;for-step statement&lt;br&gt;for-each statement&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;beginning of the line and hit &lt;tab&gt; to&lt;/td&gt;&lt;td&gt;func&lt;/td&gt;&lt;td&gt;function declaration&lt;/td&gt;&lt;td&gt;foreu&lt;/td&gt;&lt;td&gt;for-each statement combined with an until condition&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;expand the&lt;/td&gt;&lt;td&gt;funcs&lt;/td&gt;&lt;td&gt;short function declaration&lt;/td&gt;&lt;td&gt;forek&lt;/td&gt;&lt;td&gt;for-each-key statement&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;corresponding code.&lt;/td&gt;&lt;td&gt;enum&lt;br&gt;struct&lt;/td&gt;&lt;td&gt;enum type declaration&lt;br&gt;struct type declaration&lt;/td&gt;&lt;td&gt;foreku&lt;br&gt;fork&lt;/td&gt;&lt;td&gt;for-each-key statement combined with an until condition for-key statement&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;case&lt;/td&gt;&lt;td&gt;case statement&lt;/td&gt;&lt;td&gt;forku&lt;/td&gt;&lt;td&gt;for-key statement combined with an until condition&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td rowspan=2&gt;&lt;/td&gt;&lt;td&gt;if&lt;br&gt;ife&lt;/td&gt;&lt;td&gt;if statement if statement with an else clause&lt;/td&gt;&lt;td&gt;repeat&lt;br&gt;while&lt;/td&gt;&lt;td&gt;repeat - until statement while statement&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;ifei&lt;/td&gt;&lt;td&gt;if statement with an elsif clause&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;ifeie&lt;/td&gt;&lt;td&gt;if statement with an elsif and an else clause&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;Parameter&lt;/td&gt;&lt;td&gt;The second group of k&lt;/td&gt;&lt;td&gt;eywords are expanded when the keyword precedes a&lt;/td&gt;&lt;td&gt;closing parenthesis; the&lt;/td&gt;&lt;td&gt;y are use to expand the parameter declarations.&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;declarations Also expand with&lt;/td&gt;&lt;td&gt;in&lt;/td&gt;&lt;td&gt;Declaration of an in-parameter.&lt;/td&gt;&lt;td&gt;callbn&lt;/td&gt;&lt;td&gt;Declaration of a call-by-name parameter.&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;Also expand with &lt;tab&gt;&lt;/td&gt;&lt;td&gt;inout&lt;/td&gt;&lt;td&gt;Declaration of an inver parameter.&lt;/td&gt;&lt;td&gt;ref&lt;/td&gt;&lt;td&gt;Declaration of a reference-parameter.&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;Expand keyword or indent&lt;/td&gt;&lt;td&gt;invar&lt;br&gt;&lt;tab&gt;&lt;/td&gt;&lt;td&gt;Declaration of an in-var-parameter.  (seed7-complete-statement-or-indent)&lt;/td&gt;&lt;td colspan=2&gt;If point follows a valid code keyword properly located, this perform code expansion, leaving point at the first location that must be filled.  If not take you can then type &lt;backtab&gt; to move to the next field that needs to be filled (or has already been filled). Those are &lt;a href=" markers"="" tempo="">tempo markers</a> that stay in the buffer until the buffer is closed.  If point is located anywhere else indent the line or selected block.	
Move to next field	<backtab></backtab>	(tempo-forward-mark)		t tempo marker, the next template field to fill.

Move point to the next <u>tempo marker</u>, the next template field to fill.

			• Supports Shift-Selection.			
Move to top of block	C-c C-t	(seed7-to-top-of-block)	Move point to the top of the current block; out of any nesting.			
Move to block	C-c C-a	(seed7-to-block-backward &optional AT-	Move backward from block end to its beginning.			
backward		BEGINNING-OF-LINE DONT-PUSH-MARK)	<ul> <li>Move point to the beginning of the block keyword or comment.</li> <li>If point moves to the indenting area as a result, and AT-BEGINNING-OF-LINE</li> </ul>			
			optional argument is set, move point to the beginning of the line.  • Push mark unless DONT-PUSH-MARK is non-nil. Supports shift-marking.			
			Return found position if found, nil if nothing found.			
Move to block forward	C-c C-e	(seed7-to-block-forward &optional DONT-PUSH-MARK)	Move forward from the block beginning to its end.  • Handle function and forward declarations blocks.			
			Push mark unless DONT-PUSH-MARK is non-nil. Supports shift-marking.     Return found position or nil if nothing found.			
Cross Reference	The Seed7 programming	language can inspect itself: it is reflective in the sense	that it can be parsed easily by the simple Seed7 code.			
<u>Navigation</u>	The <u>seed7-mode</u> takes	s advantage of this to provide quick cross reference na	avigation without the need of a language server or ctags parsing.  ss reference parser and is used as the backend for Emacs xref.			
See also: ∑ Xref	<ul> <li>This program can be interpreted (the most flexible option) or compiled.</li> <li>Identify the location of the program in the seed7-xref customizable user-option in the seed7 customization buffer (access it via C-c C or <f12> <f3>.</f3></f12></li> <li>Once the <a href="mailto:s7xref.sd7">s7xref.sd7</a> program properly in place (the seed7-mode default should be enough) you can use the following commands to navigate quickly across Seed7</li> </ul>					
See also. <u>E Alei</u>						
	<ul> <li>Note that the <u>seed7-mode</u> back-end implementation of xref-find-definition does more than only looking up for identifiers managed by the <u>s7xref.sd7</u> program: it is also aware oo block and file scope and can identify the location of a local or global variable.</li> </ul>

identifier at point		, in the second of the second	<ul> <li>If there are more than one match, prompt in the *xref* buffer.</li> <li>To search for a symbol entered manually, type C-u M</li> </ul>			
			With dumb-jump this performs a search using ag, ripgrep or git grep if available.			
Go back to where M	М-,	(xref-pop-marker-stack)	Pop back to where M was last invoked.     Marker depth is controlled by the wast marker ring length user entire.			
was last issued			Marker depth is controlled by the xref-marker-ring-length user option.			

Description	<u>Keystroke</u>	Function	<u>Note</u>	
Syntax-aware automatic Indentation  See also Indentation	Emacs approach to indentation control is based on what the major-mode provides. For Seed7 code, the indentation is controlled by logic implemented by the seed7-mode.  Unless explicitly disabled by setting the seed7-auto-indent user-option to nil, the <tab> and <return> key perform syntax-aware automatic indentation of Seed7 code. The <return> key also supports the auto-fill-mode.  • When you type code and hit the <return> key the line you just typed is indented to the location corresponding to the Seed7 indentation rules.  • When you press the <tab> key anywhere on the line, the seed7-mode code shakes if the current line is properly indented and updates the indentation if</tab></return></return></return></tab>			
Auto-fill-mode	The seed7-mode supports Emacs auto-fill-mode, useful when typing comments. See the Fill/Justify page and the pel-comment-style command above.			
Expand keyword or indent	<tab></tab>	(seed7-complete-statement-or-indent)	If point follows a valid code keyword properly located, this perform code expansion, leaving point at the first location that must be filled.  In that case you can then type <backtab> to move to the next field that needs to be filled (or has already been filled). Those are <a href="tempo markers">tempo markers</a> that stay in the buffer until the buffer is closed.  If point is located anywhere else indent the line or selected block.</backtab>	
Indent enclosing block	C-M-q	(seed7-indent-block)	Indent the block enclosing point. Do not move point.	
Refill/justify	M-q	(seed7-fill)	Refill/justify comment and string paragraph, re-indent current code block.	
Compilation	The Seed7 source code is either interpreted or compiled. In both cases you can verify it's validity by performing a static check of the code, an operation that does not generate any binary file but perform the same language checking that the compiler will do.			
Static check or	C-c C-c	(seed7-compile &optional COMPILE)	Static check current Seed7 file, show errors in compilation-mode buffer.  • With optional COMPILE argument: compile the file to executable instead.	
compile Seed7 file  See ∑ Compilation  Mode  C-c C-c static check  C-u C- C-c compile	<ul> <li>* With optional COMPILE argument: compile the file to executable instead.</li> <li>* Any argument&gt;. Use C-u C-c C-c or M-0 M-<f12> c</f12></li> <li>* For example: type C-u <f12> c for compiling the file. Without the C-u prefix it just static checks the file, an operation that is much faster.</f12></li> <li>* The static analysis is performed by the command identified by the seed7-checker user-option, which defaults to s7-check.</li> <li>* You can specify any command with or without its path.</li> <li>* The compilation is performed by the command identified by the seed7-compiler user-option, which defaults to s7c.</li> <li>* You can specify any command with or without its path.</li> <li>* Any detected error is shown in a *compilation* <a href="Ecompilation Mode">Ecompilation Mode</a> buffer. Use it to navigate to the line of the code in error.</li> </ul>
