Diff & Merge

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>
Comparing and Merging Files See also: <u>Sociation Customize</u>	Emacs has two built-in packages that support comparing files: diff and ediff. • The diff package is the simplest of the tow. The second, ediff is more powerful and also support file merge. The <u>ztree external package</u> provides a tree-view directory diff. PEL activates it when pel-use-ztree is set to t .		
Open this PDF file. See also: <u>N Help/Info</u>	<f11> d <f1></f1></f11>	(pel-help-pdf &optional OPEN-WEB-PAGE)	Open the local copy of the <u>Diff & Merge</u> PDF file unless a command prefix (like C-u) was used. In that case it opens the Github-hosted file instead.
Customize PEL support for diff	<f11> d <f2></f2></f11>	(pel-customize-pel &optional OTHER-WINDOW)	Customize PEL support for diff: ztree. • If OTHER-WINDOW is non-nil (use C-u), display in other window.
Customize Emacs support for diff	<f11> d e <f3></f3></f11>	(pel-customize-library &optional OTHER-WINDOW)	Customize Emacs ediff.
Diff	The diff mode provide	s a set of commands to compare files and buffe	rs using the simple <u>diff-mode</u> .
Compare 2 files	<f11> d f</f11>	(diff OLD NEW &optional SWITCHES NO-ASYNC)	Find and display the differences between OLD and NEW files. • Prompt for NEW, then OLD files.
Compare file with its backup	<f11> d k</f11>	(diff-backup FILE &optional SWITCHES)	Diff this file with its backup file or vice versa. Uses the latest backup, if there are several numerical backups. If this file is a backup, diff it with its original. The backup file is the first file given to 'diff'. With prefix arg, prompt for diff switches.
Compare buffer and associated file	<f11> d b</f11>	(diff-buffer-with-file &optional BUFFER)	View the differences between BUFFER and its associated file.
Compare current and other window	<f11> d w</f11>	(compare-windows IGNORE-WHITESPACE)	Compare text in current window with text in another window.
	 The compare-windows-get-window-function user option defines how to get another window. By default it is set to compare-windows-get-recent-window. Compares the text starting at point in each window, moving over text in each one as far as they match. This command pushes the mark in each window at the prior location of point in that window. If both windows display the same buffer, the mark is pushed twice in that buffer: first in the other window, then in the selected window. Use this for simple comparison between 2 windows just to see if they have the same content. Split your frame in 2 windows, loaded with the buffer of the files you want to compare. Place point at the top of each buffer and issue the command. Point will be moved to the first difference in both window. If there is no difference point will be moved at the end of each window. 		
Ediff	Ediff sessions have several commands, shown in the Ediff Quick Help buffer. Type ? to toggle Ediff Quick Help from 1 line to multiple that shows all available commands. For more info see Ediff Quick Help Commands. While showing 2 or 3 buffer/files in windows Ediff provides the v/V keys for scrolling up/down. PEL scroll sync commands can also be used to provide single line scroll synced between the windows. See the <f11> commands in Scrolling table.</f11>		
Ediff 2 files	<f11> d 2</f11>	(pel-ediff-2files)	Run ediff-files on the files of current and other window. • Select the current file and the other file without prompting.
Display Ediff Manual	<f11> d e ?</f11>	(ediff-documentation &optional NODE)	Display Ediff's manual. • With optional NODE, goes to that node.
Display registry of active Ediff sessions	<f11> d e R</f11>	(eregistry) (ediff-show-registry)	Display registry of all active Ediff sessions.
Compare buffer with its file on disk	<f11> d e b f</f11>	(ediff-current-file)	Compare the buffer with its file on disk. This function can be used as a safe version of revert-buffer.
Compare 2 buffers	<f11> d e b b</f11>	(ediff-buffers BUFFER-A BUFFER-B &optional STARTUP-HOOKS JOB-NAME)	Compare 2 buffers. • Prompts for buffer A and buffer B
Compare 3 buffers	<f11> d e b 3</f11>	(ediff-buffers3 BUFFER-A BUFFER-B BUFFER-C &optional STARTUP-HOOKS JOB-NAME)	Compare 3 buffers. • Prompts for buffer A, buffer B and buffer C.
Compare file with its backup	<f11> d e f k</f11>	(ediff-backup FILE)	Compare a file with its backup. If there are several numerical backups, use the latest.
∑ Autosave/backup			If the file is itself a backup, then compare it with its original.
Compare 2 files	<f11> d e f f</f11>	(ediff FILE-A FILE-B & optional STARTUP-HOOKS) (ediff-files FILE-A FILE-B & optional STARTUP-HOOKS)	Compare 2 files. • Prompts for file A and B.
Compare 3 files	<f11> d e f 3</f11>	(ediff3 FILE-A FILE-B FILE-C & optional STARTUP-HOOKS) (ediff-files3 FILE-A FILE-B FILE-C & optional STARTUP-HOOKS)	Compare 3 files. • Prompts for file A, B and C.
Compare revision of buffer with file revision	<f11> d e f r</f11>	(ediff-revision &optional FILE STARTUP-HOOKS)	Compare versions of the current buffer, if the buffer is visiting a file under version control.
Compare versions of files in a given directory	<f11> d e d r</f11>	(edir-revisions DIR1 REGEXP) (ediff-directory-revisions DIR1 REGEXP)	Compare versions of files in a given directory. • Ediff selects only the files that are under version control. • Prompts for directory and regexp to identify files: if empty: selects all files.
Compare text in 2 windows word-by- word	<f11> d e w w</f11>	(ediff-windows-wordwise DUMB-MODE &optional WIND-A WIND-B STARTUP- HOOKS)	Compare text visible in 2 windows word-by-word. • Uses current and other (next) window.
Compare text in 2 windows line-by-line	<f11> d e w 1</f11>	(ediff-windows-linewise DUMB-MODE &optional WIND-A WIND-B STARTUP- HOOKS)	Compare text visible in 2 windows line-by-line. • Uses current and other (next) window.
Compare 2 regions word-by-word	<f11> d e r w</f11>	(ediff-regions-wordwise BUFFER-A BUFFER-B &optional STARTUP-HOOKS)	Compare text visible in 2 regions word-by-word. • Prompts for the 2 buffers and regions.
Compare 2 regions line-by-line	<f11> d e r l</f11>	(ediff-regions-linewise BUFFER-A BUFFER-B &optional STARTUP-HOOKS)	Compare text visible in 2 regions line-by-line. • Prompts for the 2 buffers and regions.
Patch file(s) and compare	<f11> d e p f</f11>	(epatch & optional ARG PATCH-BUF) (ediff-patch-file & optional ARG PATCH-BUF) BUF)	 Query for a file name, and then run Ediff by patching that file. If optional PATCH-BUF is given, use the patch in that buffer and don't ask the user. If prefix argument ARG, then: if even argument, assume that the patch is in a buffer. If odd assume it is in a file.
Patch a buffer then compare	<f11> d e p b</f11>	(epatch-buffer & optional ARG PATCH-BUF) (ediff-patch-buffer & optional ARG PATCH-BUF)	Run Ediff by patching the buffer specified at prompt. Without the optional prefix ARG, asks if the patch is in some buffer and prompts for the buffer or a file, depending on the answer. With ARG=1, assumes the patch is in a file and prompts for the file. With ARG=2, assumes the patch is in a buffer and prompts for the buffer. PATCH-BUF is an optional argument, which specifies the buffer that contains the patch. If not given, the user is prompted according to the prefix argument.

Compare common files in 3 directories	<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>
