Customizing Emacs with PEL

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>
PEL: Control Emacs via Easy Customization	customization system. This table shows how to quick buffers that operate in the Cus The first section shows navi	ly gain access to the customized d stomize mode with special key bind gation commands available inside	ad of having to write Emacs Lisp code, you use Emacs easy-to-use ata using commands that open buffers that show the customized data inside ings to speed up operation in that mode. a buffer that shows customized data (also called user options). buffers in Customization Mode to manage user options of interest.
	PEL - Configuration through Customization • PEL provides a growing set of customization groups and user option variables that control several aspects of Emacs: • The "pel-use-" activation user options identify what built-in or external Emacs Lisp package to use. PEL has logic to autoload the pack only when you need them. This way your Emacs will start quickly even if you have identified a large number of packages. • Once a package or feature is activated with the "pel-use-" user option, the other options control different behaviour of the activated paced once you have modified the configuration, execute M-x pel-init. PEL will activate the new configuration.		
Open this PDF file. See also: Melp/Info			
Customization Data	By default Emacs stores the customization data inside the Emacs init.el file, along with your other configuration, as Lisp code inside a custom-set-variable form. • When using PEL, and perhaps even if you're not, it's best to have Emacs store this data inside a <i>separate file</i> that you can put under VCS control independently from your init.el file. PEL promotes storing it inside the file ~/.emacs.d/emacs-customization.el. • Store the following Emacs Lisp code snippet inside your init.el file to do so: (setq custom-file "~/.emacs.d/emacs-customization.el") (load custom-file) • When using PEL, that code must be located before the call to pel-init. • The use of a file to store Emacs customization data separate from the Emacs init.el file provides another degree of freedom and flexibility. It becomes possible to easily distribute a configuration to several computers (or even users) without sharing more private information that can be kept inside the init.el file.		
Customize Mode	This section describes comma commands described in the se		Customize-mode showing the various user options you got access to using the
Move to Avy/Ace target See also: <u>∑ Navigation</u>	o	(ace-link-custom)	 Highlight each target with an Avy/Ace single or double letter target. Type the letter(s) to move to that position. This is a very efficient and quick navigation mechanism. Requires ace-link external package PEL downloads, installs and activates it when the pel-use-ace-link user option is set to t.
Apply customization changes	C-c C-c	(Custom-set &rest IGNORE)	Set the current value of all edited settings in the buffer.
Apply and Save customization changes	C-x C-s	(Custom-save &rest IGNORE)	Set all edited settings, then save all settings that have been set. • If a setting was edited and set before, this saves it. If a setting was merely edited before, this sets it then saves it.
Quit Customization and close buffer	q	(Custom-buffer-done &rest IGNORE)	Exit current Custom buffer according to 'custom-buffer-done-kill'.
Browse customize data tree	The following commands create a tree browser for the customize hierarchy inside a *Customize Browser* buffer. Each node can we expanded down to a single options and any can be collapsed. Note that PEL's customization groups and options are all always available contrary to the ones that will be available in the Emacs group because the Emacs group contains only what is currently loaded and the PEL one is always loaded.		
Browse complete customize data tree from root: Emacs	<f11> <f2> B</f2></f11>	(customize-browse &optional GROUP)	Open the customize tree bowser for the entire Emacs customization data already loaded. • Unfortunately this command does not prompt it always opens the tree from the root. To specify a group use the command shown below. • Emacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible.
Browse customize data tree from specified group	<f11> <f2> b</f2></f11>	(pel-browse-group GROUP)	Browse the customization tree from a specific group node. • Prompts for a group name. Supports tab completion. • All PEL groups have a name that starts with "pel-". ⚠ Emacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible. All of PEL data is always loaded. • ⑤ The pel-customize-library commands available as the <f3> key of PEL key prefixes does not suffer from this problem: it will detect that the library is not loaded and will prompt you for loading it, giving you access to the customization buffer when you need it. The information is available in the various PDF pages at the top of each page.</f3>
Browse PEL customize data tree	<f11> <f2> P B</f2></f11>	(pel-customize-browse)	Open the customize tree bowser for the entire PEL customization data (which is under Emacs/Convenience.
Emacs Easy Customization	With the following command you can gain access to the Customize-mode to customize anything of interest. With the first command you open the customization buffer and then you can search or browse what you want to customize. The second command allow you to open the buffer at a specific customization group and the third one at a specific user option. These commands prompt for the information you are looking for. You car always use completion by typing tany point to get a list of available groups or variables. Several of the commands below open the PEL customization group and one or several other groups related to the same topic, when these groups are already loaded. • If you set the OTHER-WINDOW argument, the command open s the buffer in another window and also open any group related that exists. For example if you open the PEL group for grep with C-u <f11> <f2> g, this will also open the grep group, the rg and ripgrep groups if they are loaded. Each group will open inside its own bugger and the command will create the necessary windows. • A Until a package is loaded its customization group is unknown to Emacs and no buffer will be opened for it. To see the customization group, first load the package via one of its command that is auto-loaded or load it explicitly. • Note however that the PEL commands that open customization groups attempt to identify the library where the customization group is defined and will prompt you to load the related library to enable access to the customization group. The groups accessible via the PEL commands are limited to what PEL supports.</f2></f11>		
Customize Emacs	<f11> <f2> c</f2></f11>	(customize)	Select a customization buffer which you can use to set user options. User options are structured into "groups". Initially the top-level group 'Emacs' and its immediate subgroups are shown; the contents of those subgroups are initially hidden. Emacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible.

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>
Customize a specific group	<f11> <f2> g</f2></f11>	(customize-group &optional GROUP OTHER-WINDOW)	Customize GROUP, which must be a customization group. If OTHER-WINDOW is non-nil (use C-u), display in another window. This command provides completion and you can use it to detect groups. Emacs is only able to show the name names of groups that are defined in files that have already been loaded. You won't be able to open a group that is not already loaded. The pel-customize-library commands available as the <f3> key of PEL key prefixes does not suffer from this problem: it will detect that the library is not loaded and will prompt you for loading it, giving you access to the customization buffer when you need it. The information is available in the various PDF pages at the top of each page.</f3>
Customize a user option	<f11> <f2> o</f2></f11>	(customize-option SYMBOL)	Customize SYMBOL, which must be a user option. • As with groups, Emacs provides completion for user options, allowing you to detect user options. • Emacs is only able to show the name names of user options that are defined in files that have already been loaded. You won't be able to open a group that is not already loaded. But see the notice in the above cell.
Activate and cleanup your packages using PEL customization user- variables	PEL provides customization-driven package management. PEL controls download, installation and configuration of the packages supported by its pel-use- user-options controlled by the PEL customization groups. The packages missing are installed when you start Emacs or when you explicitly run the pel-init command. PEL also removes the packages that are not required by the PEL user-options when you issue the pel-cleanup command. Use a key prefix for this command to perform a dry-run of the command and produce a report of what would be removed. PEL does not delete packages. Instead it places them into separate directories, called "attic" directories. You can then retrieve the package from the directories later. The elpa packages are stored in the directory identified by package-user-dir or in the "elpa" directory inside the user-emacs-directory. The elpa attic is identified by a name that appends "-attic" to the above directory name. On a Unix-like system that would normally be "-/.emacs.d/elpa" and "-/.emacs.d/elpa-attic". The non-elpa files are stored in the directory identified by the pel-utils-dirname user-options (which defaults to "utils") inside the directory identified by the user-emacs-directory. Its attic directory name is the same name with a "-attic" suffix. By default, on Unix-like systems the directories are "-/.emacs.d/utils" and "-/.emacs.d/utils-attic". On Windows system the directories are located in your User directory, as controlled by Emacs. Also on Emacs 27.1 and later these directories can be located somewhere else.		
Re-initialize PEL, activate the new PEL user-option, install packages newly requested	M-x pel-init	(pel-init &optional CACHED-ABBREV-FILE-NAME)	Re-initialize PEL. Download, install and configure any package requested by the various pel-use- user-options that have not yet been installed. Does not remove anything. Use pel-cleanup for that. The argument is not accessible interactively and exists for the initial Emacs startup only.
Show PEL user option and package info See also: Help/Info	<f11> ? e ?</f11>	(pel-package-info &optional FULL-REPORT)	Display the following information in the echo area: • The number of PEL user-options, and the number of them that are active. • The number of Elpa packages active: the count of the ones directly installed because of active PEL user-options and the count of them installed as dependencies of the first group. • The number of Emacs Lisp files stored in the ~/.emacs.d/utils (or equivalent directory) as a result of PEL user options. • With optional argument, generates a full report with much more details in a *pel-user-options* report buffer. Any key prefix works. M <f11>? e for example.</f11>
Disable all packages not requested by PEL user-options and not identified as dependency or packages that must be kept. Update the load path and the customization file content.	M-x pel-cleanup	(pel-cleanup &optional DRY-RUN)	After prompting for a confirmation, de-activates all Elpa and non-Elpa packages that are not requested by a PEL user-option. The command keeps packages that are dependencies of packages required by PEL user-options and packages that PEL always requires. It also keeps packages that you have identified as manually installed in the following user options: • pel-elpa-packages-to-keep • pel-utils-packages-to-keep • Pel-utils-packages-to-keep Arrow To the current version of PEL when you install an Emacs package with the Emacs package system, PEL does not automatically add the package name in the pel-elpa-packages-to-keep user-option. If you want to keep that package and configure it yourself with your own Emacs Lisp code invoked by your init.el file, add the package symbol name to the list of pel-elpa-packages-to-keep otherwise pel-cleanup will move the package to the elpa-attic.
Perform a dry-run of pel- cleanup. Generate a detailed report.	M M-x pel-cleanup		Runs pel-cleanup in dry-mode and produce a detailed report of what pel-pel-cleanup would remove in a *pel-cleanup* buffer.
Input Completion Mode Selection See also: •	PEL supports several input completion modes: the following input completion modes: 1. Emacs' default tab completion 2. Helm mode completion 3. Ido mode completion 4. Iwy mode completion 5. Ido mode completion 6. Ido/Helm mode where Ido is used for dealing with Files and buffers and Helm is used everywhere else (including all Helm specific commands). **PEL also has commands that uses the ilMenu system to list symbol defined in the current or all buffers. The behaviour and user interface or these commands and be modified and extended by several external packages and customization user-options: **pel-imenu-follows-order-p user-option controls whether entries are sorted or follows the order of declaration in the file. **Imenu-anywhere external package and customization user-option is used by pel-use-option, controls whether ilMenu lists are flatten or hierarchical. **Imenu-anywhere external package and customization method. The user-option must be set to one of the following values: **Use emacs-default: basic Emacs completion. Use tab to see possible matches. **Use lido. If pel-use-ido must be turned on. **Use lido. Pel-use-ido must be turned on. **Use lido. Pequires livy mode Pel-use-popup-imenu user-option, provides one pop-up menu for the ilMenu content. ***Dopup-imenu external package activated by pel-use-popup-switcher user-option, provides the same as popup-imenu and more. ***Use lido. Pequires livy mode activated by pel-use-popup-switcher user-option, provides the same as popup-imenu and more. ***To customize the above, use: ***Cf11> M-c <f2> to customize the PEL completion group user options. It is also available via M-g <f4> <f2>. ***Cf11> M-c <f2> to customize the PEL ilMenu user-options. As soon as one of the extra completion mode and to see which one is currently active.</f2></f2></f4></f2>		

Operation Select the completion mode	Keystroke	Function (pel-select-completion-mode)	Note Prompt user for completion mode to activate. The available modes depend on what is currently activated by customization. See the list above.	
Show what completion mode is currently used.	<f11> M-c ?</f11>	(pel-show-active-completion-mode)	Display the completion mode currently used.	
Search Tools Selection See also: Search/Replace	PEL supports several search tools that impact the way the C-s command operates. PEL supports the following search tools: • Emacs' default ISearch • Manzu, ISearch with match count • Swiper search with overview match list • Swiper search with overview match list • Use <f11> s <f3> to customize the PEL completion group user options above. • Set the pel-initial-search-tool user option to select which search tool is used when Emacs starts. As soon as one of the extra search tool is activated via the corresponding pel-use- user option, PEL makes the following commands available to</f3></f11>			
Show which search tool is currently used	change the currently used search tool and to see which one is currently active. <f1> ? s (pel-show-active-search-tool) Display the currently used search tool.</f1>			
Select search tool to use	<f11> s s</f11>	(pel-select-search-tool)	Prompt user for search tool to use with C-s . Show new active one. • Emacs normally maps the search-forward command to C-s . • PEL provides the ability to activate the following tools that can be activated for searching: • The Anzu external package activated by pel-use-anzu user option. Anzu provides a match count in the mode line when search command is used. • The Swiper external package activated by pel-use-swiper user option. Swiper is not using isarch-forward; it shows a list of matching lines in the mini-buffer. • The Swiper external package backage but activated by pel-use-swiper user option. Swiper is not using isarch-forward; it shows a list of matching lines in the mini-buffer. • The Swiper external package backage but activated by pel-use-swiper user option. Swiper is not using isarch-forward; it shows a list of matching lines in the mini-buffer. • The Swiper external package backage backage but activated by pel-use-swiper user option. Swiper user option to identify which tool is used when Emacs starts. • Being able to search using either Emacs default ISearch (see below) and Swiper helps as they are both very useful in different scenarios.	
Customize PEL support	The following commands opens the Emacs customization group related to a PEL topic. Most of these commands do not prompt; they open the customization buffer at the requested group. If you prefix the following commands with C-u PEL will also open the customization groups related to the specific feature. To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable. For motion variables that control mode hooks (eg. the flyspell automatic activation for specific major modes), you also need to restart Emacs.			
All PEL	<f11> <f2> P !</f2></f11>	(pel-cfg &optional OTHER-WINDOW)	Customize PEL support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
PEL base	<f11> <f2> p</f2></f11>	(pel-customize-pel-base- emacs-group &optional OTHER- WINDOW)	Customize basic PEL configuration: open the pel-base-emacs group. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
Customize specific PEL group	The following key bindings almost all use the same PEL command: (pel-customize-pel &optional OTHER-WINDOW). The command detects the key sequence that invoked it to select the customization group to open. If there are more than one it prompts for the one to open. If a group is not loaded, PEL prompts for loading it. • All of these commands open the buffer inside another window if a prefix argument (like C-u) is typed first.			
<u>∑ Align</u>	<f11> t a <f2></f2></f11>	Customize PEL support for text alignment.		
∑ <u>Auto-Completion</u>	<f11> , <f2></f2></f11>	Customize PEL auto-completion support: auto-complete, company and hippie-expand.		
<u> </u>	<f11> ' <f2></f2></f11>	Customize PEL support for bookm	ark groups: bookmark, bm.	
<u>∑ Buffers</u>	<f11> b <f2></f2></f11>	Customize PEL support for buffer management: hexl.		
<u>∑ Comments</u>	<f11> ; <f2></f2></f11>	Customize Emacs support for comment hide control: hide-cmnt.		
<u>∑ Cursor</u>	<f11> m <f2></f2></f11>	Customize PEL support for cursor and multiple-cursors.		
∑ Filling/Justification	• <f11> t f <f2> • <f11> t j <f2></f2></f11></f2></f11>	Customize PEL support for:		
<u> ∑ Diff & Merge</u>	<f11> d <f2></f2></f11>	Customize PEL support for diff: ztree.		
<u>∑M Dired</u>	<f11> f <f2> 2</f2></f11>	Customize PEL support for dired,	·	
<u>∑ Drawing</u>	<f11> D <f2></f2></f11>	Customize PEL drawing mode sup	'	
<u>∑ File-mngt</u>	<f11> f <f2> 1</f2></f11>	Customize PEL support for file ma	•	
<u>∑ File-mngt</u> - dir. tree browser	<f11> B <f2></f2></f11>	Customize PEL support for directory tree browsers: treemacs, ztree		
<u>∑ File-mngt</u> - NeoTree	<f11> B N <f2></f2></f11>	Customize PEL support for NeoTree directory browser		
<u>▼ Frames</u>	<f11> F <f2></f2></f11>	Customize PEL frame management support.		
<u>∑ Grep</u>	<f11> g <f2></f2></f11>	Customize PEL grep support. Groups: grep, ag, rg, ripgrep, wgrep.		
∑ Highlight ∑ Indentation	<f11> h <f2></f2></f11>		highlight management: fill-column-indicator, vline, parinfer, rainbow-delimiters.	
∑ Indentation ∑ Incorting Toyt	<f11> <tab> <f2></f2></tab></f11>	Customize PEL support for:		
∑ Inserting Text ∑ Keyboard Macros	<f11> i <f2></f2></f11>	Customize PEL text insertion support: lice, smart-dash, tempo, time-stamp, yasnippet		
// Noyboard Water	• <f11> k e <f2> • <f11> k 1 <f2></f2></f11></f2></f11>	Customize the PEL keyboard macro external package support: centimacro, emacros, elmacro.		
<u>∑ Key-Chords</u>	<f11> <f5> k <f2></f2></f5></f11>	Customize PEL Key Chord support.		
Input Completion: Completion/Input	• <f11> M-c <f2> • M-g <f4> <f2></f2></f4></f2></f11>	Customize PEL Input Completion support.		
<u>∑ Marking</u>	<f11> . <f2></f2></f11>	Customize PEL Marking support.		
<u>∑ Menus</u> - iMenu	<f11> <f10> <f2></f2></f10></f11>	Customize PEL imenu support.		
<u>Navigation</u>	<f11> <f2> P n</f2></f11>	(pel-cfg-pkg-navigation &optional OTHER-WINDOW)	Customize PEL and Emacs navigation tools support. Provides access to the following customization groups: 1. PEL project management 2. avy If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u> ∑ Projectile</u>	• <f11> <f2> P <f8></f8></f2></f11>	(pel-cfg-pkg-project-mng	Open the projectile customization group where you can modify projectiles	
		&optional OTHER-WINDOW)	configuration. The key consumer < £11> <£2> B <£9> is always available the others.	

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>
	• <f11> <f8> <f2> • <f8> <f2></f2></f8></f2></f8></f11>	(pel-customize-pel &optional OTHER-WINDOW)	are only available when the projectile mode is activated. Available when the projectile external package is activated by PEL with the pel-use-projectile user option is non-nil.
∑ Scrolling	<f11> <f2></f2></f11>	Customize PEL Scrolling support.	
∑ Search/Replace	<f11> s <f2></f2></f11>	Customize PEL basic search support.	
Regular Expression	<f11> s x <f2></f2></f11>	Customize PEL regular expression tool support.	
∑ Search/Replace		· · · · · ·	
∑ Sessions	<f11> S <f2></f2></f11>	Customize PEL Session support.	
∑ Shells	<f11> z <f2></f2></f11>	Customize PEL Shell support.	
<u> ▼ Speedbar</u>	<f11> M-s <f2></f2></f11>	Customize PEL Speedbar support	
∑ Spell Checking	<f11> \$ <f2></f2></f11>	mode or flyspell-prog-mode.	checking. Identify which major modes will automatically activate either flyspell-
<u>∑ Xref</u> - cross reference	<f11> X <f2></f2></f11>	Customize PEL cross-reference su	upport: ctags/etags/gtags
<u> ▼ Text Modes</u>	• <f11> t <f2> • <f11> t m <f2< td=""><td>Customize PEL text management</td><td>support.</td></f2<></f11></f2></f11>	Customize PEL text management	support.
<u>∑ Undo/Redo/Repeat/Arg</u>	<f11> u <f2></f2></f11>	Customize PEL undo support.	
<u>∑ vcs</u>	<f11> v <f2></f2></f11>	Customize PEL Version Control Sy	ystem support.
<u></u> <u>Windows</u>	<f11> w <f2></f2></f11>	Customize PEL Window support.	
Yasnippet - <u>∑ Inserting Text</u>	<f11> y <f2></f2></f11>	Customize PEL Yasnippet text ins	ertion support.
Configure PEL Programming Language support	The following commands opens the Emacs configuration group to configure PEL support for the specified programming language. You should be able to control most of the important features of the programming languages through these customizations including the activation of important packages as well as aspects of programming language styles like indentation style and width. The <f11> SPC key prefixes are available globally (for all buffers). The <f12> <f2> key is only available when point is in a buffer for one of the languages supported by PEL and open the PEL customization group for the programming language for the current buffer. When you use the <f11> SPC prefix, you can customize the Emacs language library support that might not even be loaded: PEL will detect if the corresponding library is loaded and will prompt you asking if you want to load it first, allowing Emacs to open the customization buffer. To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable. Alternatively close and re-start Emacs.</f11></f2></f12></f11>		
AppleScript & text audio narration	<f11> SPC a <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Applescript suppo	ort. use C-u), display in another window.
<u> Ф1 - С</u>	<f11> SPC c <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL C support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
क् <u>रा</u> - C++	<f11> SPC C <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL C++ support: cpp. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u> Ф1 - D</u>	<f11> SPC D <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL D support: d-mode. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u> Фім- Lispy</u>	<f11> <f2> SPC M-L</f2></f11>	(pel-cfg-pkg-lisp &optional OTHER-WINDOW)	Customize support for Lisp programming languages - A group that also contains the groups for Emacs Lisp and Common Lisp: lispy. • If OTHER-WINDOW is non-nil (use C - u), display in another window.
≴भा - Emacs Lisp	<f11> SPC 1 <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Elisp support. • If OTHER-WINDOW is non-nil (u	use C-u), display in another window.
<u> ⊈भा - Emacs Lisp</u> eldoc	<f11> SPC 1 ? <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Elisp support: eldoc-box. • If OTHER-WINDOW is non-nil (use C - u), display in another window.	
भ्रा - Common Lisp	<f11> SPC L <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Lisp support: lisp, lispy. • If OTHER-WINDOW is non-nil (use C - u), display in another window.	
BI - Elixir	<f11> SPC x <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Elixir support: alct • If OTHER-WINDOW is non-nil (u	nemist, alchemist-iex. use C-u), display in another window.
អ្នរ - Erlang	<f11> SPC e <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Erlang support: erlang, erldoc, edts, auto-highlight-symbol. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
भ्रा - Forth	<f11> SPC f <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Forth support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u> PI - Go</u>	<f11> SPC g <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Go support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
भ्रा - Julia	<f11> SPC j <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Julia support: julia, julia-mode, julia-snail. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
<u>ֆι - NetRexx</u>	<f11> SPC N <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL NetRexx support. Use this to activate NetRexx support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
भ्रा - Python	<f11> SPC p <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL Python support: python, python-flymake. • If OTHER-WINDOW is non-nil (use c-u), display in another window.	
Ֆι - REXX	<f11> SPC R <f2> <f12> <f2></f2></f12></f2></f11>	Customize PEL REXX support. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
Configure PEL Markup support	The following commands opens the Emacs customization group related to configure PEL support for the specific markup language. • The <f11> SPC key prefixes are available globally (for all buffers). • The <f12> <f2> key is only available when point is in a buffer for one of the languages supported by PEL and open the PEL customization group for the markup language for the current buffer. • To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable. • To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable. • To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable. Alternatively close and re-start Emacs.</f2></f12></f11>		

<u>Operation</u>	Keystroke	Function	Note	
M Graphviz Dot	<f11> SPC M-g <f2></f2></f11>	Customize PEL Graphviz-Dot sup		
	<f12> <f2></f2></f12>		use C-u), display in another window.	
M PlantUML	• <f11> D u <f2></f2></f11>	Customize PEL PlantUML support.		
	• <f11> SPC M-u <f2></f2></f11>	• If OTHER-WINDOW is non-nil (u	use C-u), display in another window.
