| Key Sequence help                                                               | Emacs has a large number of key bindings as these tables clearly show. Key strokes are extended in various ways and key prefixes is one of them. The following commands show available keys, help learning the key sequences, list the remaining available bindings, and list recent history of the typed keys and commands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

The command is placed in the minibuffer as a Lisp form for editing. The result is executed, repeating the command as changed.</li> <li>If the command has been changed or is not the most recent previous command it is added to the front of the command history.</li> <li>You can use the minibuffer history commands M-n and M-p to get different commands to edit and resubmit.</li> </ul>                                                                                                                                                                |
| Command Log Mode                                                                | The command-log-mode open a dedicated window that shows the log of all key sequence and mouse events and the executed command name.  The information is similar to what is available with view-lossage, but in a nicely formatted way, much easier to use.  See the \( \subseteq \text{Windows} \) table for commands that can be used to toggle the dedicated state of the window allowing you to move the window.  This requires the \( \command-\text{log-mode.el file} \) from the \( \command-\text{log-mode external package} \).  PEL installs the latest version of that file when the \( \text{pel-use-command-log-mode} \) user option is set to t.  PEL saves it inside your \( \text{.emacs} \) via get the latest version, erase that file and its \( \text{.elc from \( \text{.emacs} \) versacs/utils and execute pel-init or restart Emacs. PEL installs it this way because the official project doesn't seem maintained.  With PEL you can customize command-log-mode by typing \( \frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\ |                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

The default setting is controlled by the clm/log-all.  • The list of non-logged commands is controlled by clm/non-logged-commands.                                                                                                                                                                                                                                                                                                                                                         |
| Help with Emacs <u>Help</u> ,<br><u>Apropos</u> , and <u>Info</u> .             | The following commands search, gather and open information in buffers using the info reader format. The info reader mode commands are shown after the command list. As with everything in Emacs you can always get help on the current mode, that applies to the info reader mode as well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

Symbols are shown if they are defined as functions, variables, or faces, or if they have nonempty property lists. PATTERN can be a word, a list of words (separated by spaces), or a regexp (using some regexp special characters). If it is a word, search for matches for that word as a substring. If it is a list of words, search for matches for any two (or more) of those words.                                                                                                                                                                                                                                               |

|                                                  | top level of a file but not if they are enclosed in any other statements. This limits its usefulness when conditional loading is located in the init.el file and when the use-package macros are used. Both of these techniques are used by PEL to reduce init time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |

| • <u>at - Erlang</u><br>• <u>∑ Customize</u>     | <ul> <li>but it's very useful in systems where man is not available.</li> <li>The man command will find pages that the system's man can find. This can be extended or modified by setting the MANPATH environment variable. Inside Emacs you can also customize the Emacs Man-switches user option to provide extra configuration including a different MANPATH by using the -M switch. For an example see how to add Erlang man pages in the \$\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partilde{\Partil</li></ul> |                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |

| Open PEL PDF Help File See also: <u>➤ Legend</u> | PEL includes a list of help PDF files such as this one for several topics.  You can open a local or GitHub hosted raw copy of these help PDF using the PEL help commands bound to the <f1> key available inside several PEL key prefixes.  For example several major modes bind the <f12><f1> key sequence to PEL help. Other such as help for abbreviations is <f11> a <f1> The complete list of these key bindings is listed below.  Unfortunately not all Help PDF files have key sequences for them. However, you can:  Open any PDF file with the pel-help-pdf-select command: it prompts for a topic with tab completion support: use <f11>? p  Open a dired buffer on the local directory where all PDF files are stored with <f11>? P . Select the file(s) and type z to open the selected file(s).</f11></f11></f1></f11></f1></f12></f1>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
|                                                  | Seach PEL PDF uses icons and colour conventions. These conventions are described in the <u>▶Legend</u> table. When opening a GitHub hosted raw PDF you will want to use a browser that is capable of rendering the PDF directly instead of downloading the file to your file-system. <u>Firefox</u> does this by default. You may need to install a plugin for other browsers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
|                                                  | <ul> <li>These PEL functions select the local PDF or the remote GitHub raw PDF via a combination of factors:</li> <li>By default it opens the local PDF file unless a prefix argument is specified by typing C-u or M before the command key sequence.</li> <li>If the pel-flip-help-pdf-arg user-option is set to t, it's the other way around: it opens the remote GitHub raw PDF by default.</li> <li>By default, when opening a remote GitHub raw PDF it uses the default browse method selected by the browse-url-browser-function user-option.</li> <li>The default value of the browse-url-browser-function user-option is to use the system browser.</li> <li>You can force another one by setting PEL's pel-browser-used user-option to 'firefox or 'chrome.</li> <li>When you do that the new selected browser is also used for the local file. If you want to use this browser for remote files only and keep Emacs' ability to use a PDF viewer for local files, then set the pel-open-pdf-method user-option to 'pdf-viewer.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |

| GNU Emacs Manuals Online                           | The page with the list of all available online GNU Emacs manuals.                                                                                                                 |
| GNU Emacs Manual - Help                            | Emacs manual - Help chapter                                                                                                                                                       |
| Gnu Emacs Manual - Help Mode                       | Describes the command and key bindings that can be used in the Help-mode buffer window, which shows the help information.                                                         |
| Emacs Manuals                                      | Note that all Emacs manuals are available inside of Emacs. It's better to test, investigate code, etc                                                                             |
| GNU Emacs Manuals Online                           | Lists all GNU Emacs manuals, reference cards, etc                                                                                                                                 |
| GNU Emacs Manual                                   | Points to different formats of the manual. The format where all is inside one HTML file is useful to search. There's also the PDF formats.                                        |
| GNU Reference Cards                                | This is accessible via the first link.                                                                                                                                            |
| <b>Emacs Papers</b>                                |                                                                                                                                                                                   |
| EMACS: The Extensible, Customizable Display Editor | This paper was written by Richard Stallman in 1981 and delivered in the ACM Conference on Text Processing.                                                                        |
| Emacs Tutorials                                    |                                                                                                                                                                                   |
| A Guided Tour of Emacs                             | The official Emacs Tutorial. Part of Emacs. Best used <i>inside</i> Emacs. A good starting point. Use the others to get different point of views.                                 |
| Absolute Beginner's Guide to Emacs                 |                                                                                                                                                                                   |
| A Tutorial Introduction to GNU Emacs               |                                                                                                                                                                                   |
| Practical Emacs Tutorial @ ErgoEmacs               |                                                                                                                                                                                   |
| Emacs Cheat Sheet / Keystroke<br>Lists             | Note, however, that Emacs itself and PEL provides similar information.                                                                                                            |
| Emacs Videos                                       |                                                                                                                                                                                   |
| Emacs Rocks - home                                 | A collection of Youtube homed videos about various Emacs features. Well documented with keystrokes showing on the screen cast. Worth watching slowly to catch what is being done. |
| Emacs and Man files                                |                                                                                                                                                                                   |
| How to create a local whatis file                  | Show how to create a missing whatis file for a set of man pages and the philosophy behind apropos, whatis and makewhatis.                                                         |
