File Management

| <u>Operation</u> | <u>Keystroke</u> | Function | - <u>Note</u> |
|--|--|---|--|
| File Management See also: | Emacs provides a large set of commands to open files (Emacs documentation uses the term "finding" files for that), saving files searching for files or file content, displaying directory content, etc These are listed in this table. • The directory editing (dired) commands are mainly listed in the Molecular There are also several Emacs internal and external packages that provide useful commands. PEL supports several of them, and activates them via customize user option variables. They are listed below. Use Emacs customize system to modify their values to activate, deactivate and modify the behaviour of these packages. PEL provides the <f11> <1> f key binding to quickly gain access to the appropriate customize group where you can change their values. Once you have modified the values, save them and then either execute M-x pel-init or restart Emacs.</f11> | | |
| Open this PDF file. See also: <u>▼ Help/Info</u> | <f11> f <f1> 1</f1></f11> | (pel-help-pdf &optional OPEN- WEB-PAGE) | Open the local copy of the <u>\rightarrow File-mngt</u> PDF file unless a command prefix (like C-u) was used. In that case it opens the Github-hosted file instead. |
| PEL File/Directory Management See also: <u>Customize</u> | <f11> f <f2> 1</f2></f11> | (pel-customize-pel &optional OTHER-WINDOW) | Customize PEL support for file management. • If OTHER-WINDOW is non-nil (use C-u), display in other window. |
| Customize Emacs support for file management | <f11> f <f3> 1</f3></f11> | (pel-customize-library &optional OTHER-WINDOW) | Customize Emacs support for file management. |
| Customize Emacs support for file revert | <f11> f r <f3></f3></f11> | (pel-customize-library &optional OTHER-WINDOW) | Customize Emacs support for file automatic revert management. |
| Customize ffap (find file at point) | <f11> f a <f3></f3></f11> | (pel-customize-library &optional OTHER-WINDOW) | Customize Emacs support for management of ffap (find file at point). |
| Opening file | The following commands are available to open/visit files in Emacs buffers. For some of them the corresponding ido mode function is also shown. Note: Emacs uses the word "visiting" instead of "opening" files. The command used to 'visit' a file, find-file is Emacs default. It supports Emacs' basic tab completion. Packages that support other completion mechanisms can be installed and activated and then the command uses a different completion mechanism. PEL customization system allows you to specify whether you want to use one or several other completion mechanisms. It also has a command to change the completion mechanism dynamically. You can change it without restarting Emacs or event re-executing pel-init. See the Customize table for more info. | | |
| Open (visit) a file/directory See also: • ∑M Dired • ∑ Customize | C-x C-f | (find-file FILENAME &optional WILDCARDS) — — — — — — (ido-find-file) | Prompt for the file or directory name to open. Open the selected file/directory in a buffer with the appropriate mode. For directory, the buffer opens in Dired-mode. This can be replaced by the ido-mode by the ido-find-file: it provides suggestions. When ido mode is used, you can also: Type C-x f to change to original find-file Type C-j to accept the file/directory name verbatim without replacement or suggestion. Note: it is also possible to change the read-only state of a buffer with C-x C-q. So you can open a file with C-x C-f and then change the buffer to read-only mode. PEL supports several completion modes can all be activated and dynamically selected. See the Customize table for more info. |
| Open recently opened files, listed with Ido | <f11> f f</f11> | (ido-recentf-open) | Open file. Prompt suggests recently opened files wit Ido-style completion. • Type <tab> to get possible expansions listed in a separate buffer. Available only when both pel-use-ido and pel-use-recentf are set to t. Credits: Mickey Petersen recentf article.</tab> |
| Open recently opened files, listed with Counsel | <f11> f R</f11> | (counsel-recentf) | List files recently opened in a counsel buffer. The list of recently opened files are listed in a Counsel buffer. Select one and type return to open. Type C-c C-o to copy the list of files inside a special buffer. Requires Ivy mode completion with Counsel mode and recentf activated: set peluse-counsel and pel-use-recentf to t |
| Open currently file visited in current buffer with the default OS application. See also: Moderate Visited Property of the visited visited Property of the visited Property of | <f11> f F</f11> | (pel-open-in-os-app &optional FNAME) | Open the file with the OS-registered application. ● |
| Open file using OS file- open dialog | %-o | (ns-open-file-using-panel) | |
| Open another file in buffer | C-x C-v | (find-alternate-file FILENAME &optional WILDCARDS) (ido-find-alternate-file) | Kills buffer and open the newly specified file in a new buffer same window. When ido-mode is used, the ido-find-alternate-file is used instead. Useful when just selected an empty file just selected by mistake. |
| Open file in other window | • C-x 4 f • <f11> f o</f11> | (find-file-other-window FILENAME &optional WILDCARDS) (ido-find-file-other- window) | Edit file FILENAME, in another window. Like C-x C-f, but creates a new window or reuses an existing one. |
| Open file in other frame | C-x 5 f | (find-file-other-frame FILENAME & optional WILDCARDS) (ido-find-file-other-frame) | Edit file FILENAME, in another frame. Like C-x C-f, but creates a new frame or reuses an existing one. |
| Open a file in read-only mode | С-х С-г | (find-file-read-only FILENAME & optional WILDCARDS) (ido-find-file-read-only) | Edit file FILENAME but don't allow changes. Like C-x C-f, but marks buffer as read-only. Use C-x C-q to permit editing. |
| Open file in other window in read-only mode | • C-x 4 r • <f11> f 0</f11> | (find-file-read-only-other-window FILENAME & optional WILDCARDS) (ido-find-file-read-only-other-window) | (find-file-read-only-other-window FILENAME &optional WILDCARDS) Edit file FILENAME in another window but don't allow changes. Like C-x 4 C-f, but marks buffer as read-only. Use C-x C-q to permit editing. |
| Open a file in hexl-mode | <f11> f M-x</f11> | (hexl-find-file FILENAME) | Edit file FILENAME as a binary file in hex dump format. • Switch to a buffer visiting file FILENAME, creating one if none exists, and edit the file in |
| See also: <u>Seuffers</u> Open filename at point in a | • <f11> f /</f11> | (pel-browse-filename-at- | 'hexl-mode'. Open the file name at point inside the system's browser. |
| Open mename at point in a browser See also: • <u>∑ Key-Chords</u> • <u>∑ Web</u> | • (111) i / | point) | If point is at a directory name, open the systems application that browses directories (eg. macOS Finder, Windows Explorer). This is the same as using pel-open-at-point with the argument N set to 9. It is easier to type and PEL assigns its own key-chord for it. |

| <u>Operation</u> | <u>Keystroke</u> | Function | Note |
|---|--|--|--|
| Automatic File Time Stamp Update file time stamp See also: ∑ Inserting Text | Emacs has a built-in automatic time-stamping of files. It must be activated by adding the time-stamp function to the before-save-hook variable. This can either be done via Emacs customization system or explicitly inside your init file with the following code: (add-hook 'before-save-hook 'time-stamp) The time stamp will be added to files that contain, inside their first 8 lines, a line that looks like one of the following: Time-stamp: " The format of the time stamp is controlled by several variables: time-stamp-format specifies the format of the time stamp. Something like "%:y-%02m-%02d %02H:%02M:%02S %u" to specify the date and time in ISO format, with the user login's name. time-stamp-time-zone specifies the time zone selection: iil: Emacs local time t: Universal time wall: system wall clock time To issert a non-updatable time stamp, the PEL package provides a set of text insert commands which include inserting a time stamp. See the Inserting Text table for the appropriate commands. (time-stamp) Force update the time stamp string(s) in the current buffer. The time stamp is updated if the one of the following strings is found in the first 8 lines of the | | |
| | | | Time-stamp: <> Time-stamp: " " If you want time stamps updated automatically, write the following inside your init.el file: (add-hook 'before-save-hook 'time-stamp) |
| Toggle time stamp automatic update | | (time-stamp-toggle-active & optional ARG) | Toggle 'time-stamp-active', setting whether <f11> f t updates a buffer. • With ARG, turn time stamping on if and only if arg is positive.</f11> |
| Inserting & Automatically Updating Copyrights | Emacs has built-in support for insertion and update of copyright notices inside files. • Two commands, shown below, are provided to manually insert or update the file's copyright notice. • The copyright notice can be automatically updated by adding the copyright-update function to the list of before-save-hook variable with the following code: (add-hook 'before-save-hook 'copyright-update) • To be automatically updated, the copyright notice must be placed within an area at the beginning of the file specified by the value of the copyright-limit variable, normally defined as the first 2000 characters. This variable is customizable. | | |
| Insert copyright notice at point See also: <u>∑ Inserting Text</u> | <f11> i C</f11> | (copyright &optional STR ARG) | Insert a copyright by \$ORGANIZATION notice at cursor. • If the ORGANIZATION environment variable is not available, Emacs prompts for it. |
| Update file's copyright notice | | (copyright-update &optional ARG INTERACTIVEP) | Update copyright notice to indicate the current year. • With prefix ARG, replace the years in the notice rather than adding the current year after them. If necessary, and 'copyright-current-gpl-version' is set, any copying permissions following the copyright are updated as well. • If non-nil, INTERACTIVEP tells the function to behave as when it's called interactively. • Even when used interactively copyright-update does not warn if there is no copyright in the current buffer to update. It does not create a missing notice. • If you want to be prompted automatically to update an existing but out-of-date copyright notice, write the following inside your init.el file: (add-hook 'before-save-hook 'copyright-update) |
| Directory Tree Browsers | Emacs built-in ∑M □ The Emacs built-in ∑ | | everal extensions. You can have several different Dired buffers in an Emacs session. There can only be one instance of a Speedbar buffer and that can be inside another frame. |
| View Directory Tree with NeoTree | The NeoTree external package provides a Vim-NerdTree like tree-view of a directory with expansion/collapse. PEL activates it when pel-use-neotree is set to t. <f11> B N <f2> opens the PEL customization group to set pel-use-neotree.</f2></f11> <f11> B N <f3> prompts, select neotree to open the neotree customization group.</f3></f11> There is only one NeoTree window. It is a dedicated window. lons used in the tree can be changed: In text mode set pel-neotree-font-in-terminal to arrows to use arrows instead of '+'. In graphics mode, if pel-neotree-font-in-graphics is set to icons then the icons provided by all-the-icons package is used. I However, once PEL has installed the package it does not install the fonts. You must install the fonts manually by executing: M-x all-the-icons-install-fonts | | |
| View directory tree with | <f11> B N N</f11> | (neotree-toggle) | Toggle show/hide the NeoTree window. |
| NeoTree | | In the NeoTree buffer the following keys are available: • n next line, p previous line. • > end of buffer, < top buffer • SPC or RET or TAB: Open current item if it is a file, Fold/Unfold current item if it is a directory. • U Go up a directory • g Refresh • A Maximize/Minimize the NeoTree Window • H Toggle display hidden files. Controlled by neo-hidden-regexp-list user option. • O Recursively open a directory • C-c C-n Create a file or create a directory if filename ends with a '/' • C-c C-d Delete a file or a directory. • C-c C-c Change the root directory. • C-c C-p Copy a file or a directory. | |
| Open NeoTree for dir of current buffer | <f11> B N F</f11> | (neotree-find &optional PATH DEFAULT-PATH) | Open a NeoTree window using the directory of the current buffer. No prompt. |
| Open NeoTree for specified directory | <f11> B N D</f11> | (neotree-dir PATH) | Prompt for a directory. Open a Neotree window for that directory. |
| Close NeoTree window | <f11> B N H</f11> | (neotree-hide) | Close the NeoTree window. |
| Show NeoTree window | <f11> B N S</f11> | (neotree-show) | Show the NeoTree window. |

| <u>Operation</u> | <u>Keystroke</u> | Function | <u>Note</u> | |

| View Directory Tree with ZTree | PEL ztree customiz | ration: | ee-view of a directory with expansion/collapse. | |
| | <f11> B <f2> opens the PEL customization group (select the tree subgroup). See also: Customize.</f2></f11> PEL activates it when pel-use-ztree is set to t. Modify one of the following PEL provided customization user options: | | | |
| | pel-ztree-dir-f | ilter-list : add a list of reger For example, to ig | focus to new entry when <ret> is typed. exp to ignore more file. Do not enter quote for string. gnore the .pyc files, enter ^.*pyc on a line. y filtered files until # is typed. Normally they are not shown until # is typed.</ret> | |
| | pel-ztree-show-filtered-files: set to t to display filtered files until H is typed. Normally they are not shown until H is typed. <f11> B <f3> prompts, select ztree to open the ztree customization group itself.</f3></f11> Execute M-x pel-init after settling and applying new values to activate the new values. | | | |
| View directory as tree with ztree-dir | <f11> B Z</f11> | (ztree-dir PATH) | Open an interactive buffer with the directory tree of the PATH given. Opens the tree buffer in the current window. There can be several buffers with different ztree-dir trees. | |
| | | In the Ztree Dir buffer the followi >: narrow/display directory or d: Open Dired at point. H: toggle display of filtered fill x: Toggle expand/collapse of | n current line < : widen/display parent directory es. Controlled by regexp in the ztree-dir-filter-list user option. | |
| | | | rge directory trees it takes a long time. I have see Emacs hang when typing x again during that | |
| Open <u>Dired</u> (Directory Editor) | When "opening" (visiting) a directory Emacs opens a buffer in Dired mode, that looks like a ls -l output, which allows several operations. If you specify a directory path to Cx C-f then Dired-mode is used. You can also use the following commands to open buffer in Dired mode. | | | |
| Open a directory editor See also: <u>M Dired</u> | • C-x d • %-D | (dired DIRNAME & optional SWITCHES) | Opens a Dired-mode buffer on the specified directory. Prompt for the directory name. PEL activates ido when the pel-use-ido-mode user option is set to t . | |
| Run Dired in other (next) window | C-x 4 d | (dired-other-window) | Opens a Dired-mode buffer on the specified directory inside another window. Prompt for the directory name. | |
| List Directory | C-x C-d | (list-directory DIRNAME &optional VERBOSE) | Display a list of files in or matching DIRNAME, a la 'ls'. DIRNAME is globbed by the shell if necessary. Prefix arg (C-u) means supply -l switch to 'ls'. | |
| Searching/Finding Files | The following commands can be used to search for file by name or content. Ref: Video: .Emacs #6 : searching and finding files. | | | |
| Run grep via find See also: <u>∑ Grep</u> | • <f11> f g • <f11> g f</f11></f11> | (find-grep COMMAND-ARGS) | Run grep via find, with user-specified args COMMAND-ARGS. Collect output in a buffer. While find runs asynchronously, you can use the C-x command to find the text that grep hits refer to. This command uses a special history list for its arguments, so you can easily repeat a find command. | |
| Search for file with locate | <f11> f L</f11> | (locate SEARCH-STRING &optional FILTER ARG) | Prompt for a search pattern and search for filenames using the system locate command line utility through the sell to search a database of all pathnames that match the specified search pattern. The database is recomputed periodically. • The search result is shown in a '*Locate*' buffer. • With prefix arg ARG, prompt for the exact shell command to run instead. This way you can specify options to the locate command line utility. • Use man to get more information on locate (<f11> x m locate)</f11> | |
| Search for files with 'find' and open Dired buffer | <f11> f d</f11> | (find-dired DIR ARGS) | Prompts for the root to search from, and a find command to search for files with the Unix find. • Specify the arguments for the <u>find command</u> . For example, to perform a case insensitive search for all .h files: -iname "*\.h" for all .h files. • Opens a Dired-mode buffer and show the files found in there. | |
| Search directory for files and open Dired buffer for those | <f11> f n</f11> | (find-name-dired DIR PATTERN) | Search DIR recursively for files matching the globbing pattern PATTERN, and run Dired on those files. PATTERN is a shell wildcard (not an Emacs regexp) and need not be quoted. The default command run (after changing into DIR) is: | |
| Find files in a directory and | <f11> f h</f11> | (find-grep-dired DIR REGEXP) | findname 'PATTERN' -Is Find files in DIR that contain matches for REGEXP and start Dired on output. | |
| open Dired output | | | The command run (after changing into DIR) is: find . \(-type f -exec 'grep-program' 'find-grep-options' -e REGEXP \{ \; \) -ls | |
| | | | where the first string in the value of the variable 'find-ls-option' specifies what to use in place of "-ls" as the final argument. | |
| Find Emacs Lisp files in directory tree | <f11> f 1</f11> | (find-lisp-find-dired DIR REGEXP) | Find Emacs Lisp files in DIR, matching REGEXP. Open *Find Lisp Dired* buffer on output. | |
