## **Customizing Emacs with PEL**

<u>Operation</u>	<u>Keystroke</u>	Function	Note
PEL: Control Emacs		get going quickly with Emacs. Ins	stead of having to write Emacs Lisp code, you use Emacs easy-to-use customization
via Easy Customization	system.  This table shows how to quickly gain access to the customized data using commands that open buffers that show the customized data inside buffers that operate in the Customize mode with special key bindings to speed up operation in that mode.  The first section shows navigation commands available inside a buffer that shows customized data (also called user options).  The later sections show commands that you can use to open buffers in Customization Mode to manage user options of interest.  PEL - Configuration through Customization  PEL provides a growing set of customization groups and user option variables that control several aspects of Emacs:  The "pel-use-" activation user options identify what built-in or external Emacs Lisp package to use. PEL has logic to autoload the packages only when you need them. This way your Emacs will start quickly even if you have identified a large number of packages.  Once a package or feature is activated with the "pel-use-" user option, the other options control different behaviour of the activated package.		
Open this PDF file.	Once you have modified the configuration, execute M-x pel-init. PEL will activate the new configuration.    Compared to the configuration of the pel-init of t		
See also: <u>Nelp/Info</u>	D 16 "E	WEB-PAGE)	C-u) was used. In that case it opens the Github-hosted file instead.
Customization Data	By default Emacs stores the customization data inside the Emacs init.el file, along with your other configuration, as Lisp code inside a custom-set variable form.  • When using PEL, and perhaps even if you're not, it's best to have Emacs store this data inside a separate file that you can put under VCS control independently from your init.el file. PEL promotes storing it inside the file ~/.emacs.d/emacs-customization.el .  • Store the following Emacs Lisp code snippet inside your init.el file to do so:  (setq custom-file "~/.emacs.d/emacs-customization.el") (load custom-file)  • When using PEL, that code must be located before the call to pel-init.  • The use of a file to store Emacs customization data separate from the Emacs init.el file provides another degree of freedom and flexibility. It becomes possible to easily distribute a configuration to several computers (or even users) without sharing more private information that can be kept inside the init.el file.		
Customize Mode	This section describes com commands described in the	•	j in Customize-mode showing the various user options you got access to using the
Move to Avy/Ace target See also: Navigation	0	(ace-link-custom)	<ol> <li>Highlight each target with an Avy/Ace single or double letter target.</li> <li>Type the letter(s) to move to that position.</li> <li>This is a very efficient and quick navigation mechanism.</li> <li>Requires ace-link external package PEL downloads, installs and activates it when the pel-use-ace-link user option is set to t.</li> </ol>
Apply customization changes	C-c C-c	(Custom-set &rest IGNORE)	Set the current value of all edited settings in the buffer.
Apply and Save customization changes	C-x C-s	(Custom-save &rest IGNORE)	Set all edited settings, then save all settings that have been set.  • If a setting was edited and set before, this saves it. If a setting was merely edited before, this sets it then saves it.
Quit Customization and close buffer	q	(Custom-buffer-done &rest IGNORE)	Exit current Custom buffer according to 'custom-buffer-done-kill'.
Browse customize data tree	The following commands create a tree browser for the customize hierarchy inside a *Customize Browser* buffer. Each node can we expanded down to a single options and any can be collapsed.		
Browse complete customize data tree from root: Emacs	<f11> <f2> M-b</f2></f11>	(customize-browse &optional GROUP)	Open the customize tree bowser for the entire Emacs customization data already loaded.  Lemacs is only able to show information it knows about. Customization data
Browse PEL customize data tree	<f11> <f2> P M-b</f2></f11>	(pel-customize-browse)	defined in files not loaded will not be accessible.  Open the customize tree bowser for the entire PEL customization data (which is
Emacs Easy Customization	with the following command you can gain access to the Customize-mode to customize anything of interest. With the first command you open the customization buffer and then you can search or browse what you want to customize. The second command allow you to open the buffer at a specific customization group and the third one at a specific user option. These commands prompt for the information you are looking for. You can always use completion by typing <tab> at any point to get a list of available groups or variables.  Several of the commands below open the PEL customization group and one or several other groups related to the same topic, when these groups are already loaded.  If you set the OTHER-WINDOW argument, the command open s the buffer in another window and also open any group related that exists. For example if you open the PEL group for grep with C-u <f11> <f2> g, this will also open the grep group, the rg and ripgrep groups if they are loaded. Each group will open inside its own bugger and the command will create the necessary windows.  Intil a package is loaded its customization group is unknown to Emacs and no buffer will be opened for it. To see the customization group, first load the package via one of its command that is auto-loaded or load it explicitly.  Whote however that the PEL commands that open customization groups attempt to identify the library where the customization group is defined and will prompt you to load the related library to enable access to the customization group. The groups accessible via the PEL commands are limited to what PEL supports.</f2></f11></tab>		
Customize Emacs	<f11> <f2> c</f2></f11>	(customize)	Select a customization buffer which you can use to set user options.  User options are structured into "groups".  Initially the top-level group 'Emacs' and its immediate subgroups are shown; the contents of those subgroups are initially hidden.  Emacs is only able to show information it knows about. Customization data defined in files not loaded will not be accessible.
Customize a specific group	<f11> <f2> g</f2></f11>	(customize-group &optional GROUP OTHER-WINDOW)	Customize GROUP, which must be a customization group.  If OTHER-WINDOW is non-nil (use C-u), display in another window.  This command provides completion and you can use it to detect groups.  Emacs is only able to show the name names of groups that are defined in files that have already been loaded. You won't be able to open a group that is not already loaded.
Customize a user option	<f11> <f2> o</f2></f11>	(customize-option SYMBOL)	Customize SYMBOL, which must be a user option.  • As with groups, Emacs provides completion for user options, allowing you to detect user options.  • Emacs is only able to show the name names of user options that are defined in files that have already been loaded. You won't be able to open a group that is not already loaded.

<u>Operation</u>	Keystroke	Function	Note	
Input Completion Mode	-	completion modes that kick in with	the M-x, C-x b, C-x C-f, <f1> o and many other commands. PEL supports</f1>	
Selection	the following input completion modes:  1. Emacs' default tab completion			
See also:	2. Plant and completion : set pel-use-helm to t.			
∑ Completion/Input	3. Ido mode completion : set pel-use-ido to t			
	4. Vy mode completion : description with Coursel mode of Potential via a coursel to the			
		<ol> <li>5.</li></ol>		
	commands).	commands).		
		to customize the PEL completion g	roup user options above.	
	Set the pel-initial-con	npletion-mode user option to selec	t which completion mode is used when Emacs starts.	
		completion mode is activated via the completion mode is activated via the complete c	he corresponding pel-use- user option, PEL makes the following commands available atty active.	
Select the completion mode	<f11> M-c</f11>	(pel-select-completion-mode)	Prompt user for completion mode to activate. The available modes depend on	
			what is currently activated by customization. See the list above.	
Show what completion mode is currently used.	<f11> ? M-c</f11>	(pel-show-active-completion- mode)	Display the completion mode currently used.	
Search Tools Selection	PEL supports several searc	h tools that impact the way the <b>C-s</b>	command operates. PEL supports the following search tools:	
	Emacs' default ISearcl     Anzu, ISearch with		I-use-anzu to t.	
See also:  Search/Replace		<u> </u>	r-use-swiper to t	
		to customize the PEL completion g		
	As soon as one of the extra	search tool is activated via the corn	n search tool is used when Emacs starts.  responding pel-use- user option, PEL makes the following commands available to	
Show which socrab tool is		search tool and to see which one is		
Show which search tool is currently used	<f1> ? s</f1>	(pel-show-active-search-tool)	Display the currently used search tool.	
Select search tool to use	<f11> s s</f11>	(pel-select-search-tool)	Prompt user for search tool to use with <b>C-s</b> . Show new active one.	
			<ul> <li>Emacs normally maps the search-forward command to C-s.</li> <li>PEL provides the ability to activate the following tools that can be activated for</li> </ul>	
			searching:  •  The Anzu external package  activated by pel-use-anzu user option. Anzu	
			provides a match count in the modeline when search command is used.	
			• ** The Swiper external package ** activated by pel-use-swiper user option. Swiper is not using isarch-forward; it shows a list of matching lines in the mini-	
			buffer.  • \$\infty\$ Use the <f11> <f2> s command to open the PEL search customize</f2></f11>	
			group and set the pel-initial-search-tool user option to identify which tool is	
			used when Emacs starts.  Being able to search using either Emacs default ISearch (see below) and Swiper	
			helps as they are both very useful in different scenarios.	
Customize PEL support	The following commands of customization buffer at the		p related to a PEL topic. Most of these commands do not prompt; they open the	
			o open the customization groups related to the specific feature.	
	⚠ ⑤ To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable. For motion variables that control mode hooks (eg. the flyspell automatic activation for specific major modes), you also need to restart			
	Emacs.			
All PEL	<f11> <f2> P !</f2></f11>	(pel-cfg &optional OTHER-WINDOW)	Customize PEL support.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
		The following key bindings almost all use the same PEL command: (pel-customize-pel &optional OTHER-WINDOW). The command detects the key sequence that invoked it to select the customization group to open. If there are more than one it prompts for the one to open. If a group is not		
	loaded, PEL prompts for loa	ading it.		
W Alian	<pre>• All of these commands o <f11> t a <f2></f2></f11></pre>		w if a prefix argument (like C-u) is typed first.	
∑ Align  ∑ Auto-Completion  Z Auto-Completion	<f11> t a &lt;12&gt;</f11>	Customize PEL support for text alignment.  Customize PEL auto-completion support: auto-complete, company and hippie-expand.		
	<f11> / <f2></f2></f11>	Customize PEL support for bookn		
Buffers	<f11> b <f2></f2></f11>	Customize PEL support for buffer		
<u>∑ Comments</u>	<f11> ; <f2></f2></f11>	Customize Emacs support for cor	nment hide control: hide-cmnt.	
<u>∑ Cursor</u>	<f11> m <f2></f2></f11>	Customize PEL support for cursor and multiple-cursors.		
<u> ∑ Diff &amp; Merge</u>	<f11> d <f2></f2></f11>	Customize PEL support for diff: ztree.		
<u>∑M Dired</u>	<f11> f <f2> 2</f2></f11>	Customize PEL support for dired, directory editor.		
<u></u> Drawing	<f11> D <f2></f2></f11>	Customize PEL drawing mode sup	oport.	
<u></u> File-mngt	<f11> f <f2> 1</f2></f11>	Customize PEL support for file ma	anagement.	
<u></u> Frames	<f11> F <f2></f2></f11>	Customize PEL frame management support.		
<u>∑ Grep</u>	<f11> g <f2></f2></f11>	Customize PEL grep support. Gre	pups: grep, ag, rg, ripgrep, wgrep.	
<u></u> Highlight	<f11> b h <f2></f2></f11>	Customize PEL support for buffer	highlight management: parens, printer, rainbow-delimiters.	
<u>∑ Inserting Text</u>	<f11> i <f2></f2></f11>	Customize PEL text insertion support: lice, smart-dash, tempo, time-stamp, yasnippet		
∑ Keyboard Macros	• <f11> k <f2> • <f11> k e <f2> • <f11> k 1 <f2></f2></f11></f2></f11></f2></f11>	Customize the PEL keyboard macro external package support: centimacro, emacros, elmacro.		
Input Completion:  Sompletion/Input	<f11> <f2> P M-c 1</f2></f11>	(pel-cfg-pkg-completion &optional OTHER-WINDOW)	Customize PEL Input Completion support.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in other window.	
<u>∑ Key-Chords</u>	<f11> <f2> P K</f2></f11>	(pel-cfg-pkg-key-chord &optional OTHER-WINDOW)	Customize PEL Key Chord support.  • If OTHER-WINDOW is non-nil (use <b>C</b> - <b>u</b> ), display in another window.	
<u>     Navigation</u>	<f11> <f2> P n</f2></f11>	(pel-cfg-pkg-navigation &optional OTHER-WINDOW)	Customize PEL and Emacs navigation tools support. Provides access to the following customization groups:  1. PEL project management 2. avy	
			if OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>
Project Management	<f11> <f2> P <f8></f8></f2></f11>	(pel-cfg-pkg-project-mng &optional OTHER-WINDOW)	Customize PEL and Emacs project management tools support. Provides access to the following customization groups:  1. PEL project management 2. Projectile 3. etags  If OTHER-WINDOW is non-nil (use C-u), display in another window.
∑ Scrolling	<f11>   <f2></f2></f11>	Customize PEL Scrolling support.	
∑ Search/Replace	<f11> s <f2></f2></f11>	Customize PEL basic search supp	ort.
Regular Expression  Search/Replace	<f11> s x <f2></f2></f11>	Customize PEL regular expression	tool support.
∑ Sessions	<f11> S <f2></f2></f11>	Customize PEL Session support.	
∑ Shells	<f11> x <f2></f2></f11>	Customize PEL Shell support.	
∑ Speedbar	<f11> M-s <f2></f2></f11>	Customize PEL Speedbar support	
∑ Spell Checking	<f11> \$ <f2></f2></f11>	Customize PEL support for: spell or flyspell-prog-mode.	checking. Identify which major modes will automatically activate either flyspell-mode
∑ Tags - cross reference	<f11> X <f2></f2></f11>	Customize PEL cross-reference su	pport: ctags/etags/gtags
<u>∑ Text Modes</u>	<f11> t m <f2></f2></f11>	Customize PEL text management	support.
∑ Undo/Redo/Repeat/Arg	<f11> u <f2></f2></f11>	Customize PEL undo support.	
» vcs	<f11> v <f2></f2></f11>	Customize PEL Version Control Sy	stem support.
Windows	<f11> w <f2></f2></f11>	Customize PEL Window support.	
Yasnippet - ∑ Inserting Text	<f11> y <f2></f2></f11>	Customize PEL Yasnippet text inse	ertion support
rasnipper - <u>// inserting rext</u>	(1112 y (122	Oddiomize i EE radiippet text iiist	and Support.
Configure PEL Programming Language support	The following commands opens the Emacs configuration group to configure PEL support for the specified programming language.  You should be able to control most of the important features of the programming languages through these customizations including the activation of important packages as well as aspects of programming language styles like indentation style and width.  The <f11> SPC key prefixes are available globally (for all buffers).  The <f12> <f2> key is only available when point is in a buffer for one of the languages supported by PEL and open the PEL customization group for the programming language for the current buffer.  To activate any PEL customization change in the current session, execute M-x pel-init after you saving and applying the customized variable.</f2></f12></f11>		
AppleScript & text audio narration	• <f11> SPC a <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Applescript suppo • If OTHER-WINDOW is non-nil (u	rt. se <b>C-u</b> ), display in another window.
<u> рт - С</u>	• <f11> SPC c <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL C support.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
<u> βί - C++</u>	• <f11> SPC C <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL C++ support: cpp.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
<u> 13 ( - D</u>	• <f11> SPC D <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL D support: d-mode If OTHER-WINDOW is non-nil (u	e. Ise <b>C-u</b> ), display in another window.
<u> ВІМ- Lispy</u>	• <f11> <f2> SPC M-L</f2></f11>	(pel-cfg-pkg-lisp &optional OTHER-WINDOW)	Customize support for Lisp programming languages - A group that also contains the groups for Emacs Lisp and Common Lisp: lispy.  If OTHER-WINDOW is non-nil (use C-u), display in another window.
⊈βί - Emacs Lisp	• <f11> SPC 1 <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Elisp support: elint, eldoc, lispy.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
<u> Pι - Common Lisp</u>	• <f11> SPC L <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Lisp support: lisp, lispy.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
<u> Pt - Elixir</u>	• <f11> SPC x <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Elixir support: alchemist, alchemist-iex.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
भ्रा - Erlang	• <f11> SPC e <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Erlang support: erlang, erldoc, edts, auto-highlight-symbol.  • If OTHER-WINDOW is non-nil (use <b>c-u</b> ), display in another window.	
<u>βι - Forth</u>	• <f11> SPC f <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Forth support.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
भ्रा - Julia	• <f11> SPC j <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Julia support: julia, julia-mode, julia-snail.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
<b>β</b> ι - Python	• <f11> SPC p <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Python support: python, python-flymake.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
<u>βί - REXX</u>	• <f11> SPC R <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL REXX support.  • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
Configure PEL Markup support	The following commands opens the Emacs customization group related to configure PEL support for the specific markup language.  • The <f11> SPC key prefixes are available globally (for all buffers).  • The <f12> <f2> key is only available when point is in a buffer for one of the languages supported by PEL and open the PEL customization group for the markup language for the current buffer.  • To activate any PEL customization change in the current session, execute M−x pel-init after you saving and applying the customized variable.</f2></f12></f11>		
M reStructuredText	• <f11> SPC r <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL reStructuredText support.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
M Graphviz Dot	• <f11> SPC g <f2> • <f12> <f2></f2></f12></f2></f11>	Customize PEL Graphviz-Dot support.  • If OTHER-WINDOW is non-nil (use <b>C</b> - <b>u</b> ), display in another window.	
<u>M</u> PlantUML	• <f11> D u <f2> • <f11> SPC u <f2> • <f12> <f2></f2></f12></f2></f11></f2></f11>	Customize PEL PlantUML support.  • If OTHER-WINDOW is non-nil (use <b>C-u</b> ), display in another window.	
Customize Specific Emacs Groups.	<ul> <li>PEL provides several key bindings to open customization groups of Emacs built-in or external package.</li> <li>PEL will prompt you to load their specific file if they are not loaded.</li> <li>Most of the key bindings are mapped into the PEL key prefixes as the <f3> key member. For example to open auto-completion related groups you can use the <f11> , <f3> key sequence. These are not listed here.</f3></f11></f3></li> <li>PEL does not provide key prefixes for all Emacs concepts. It provides, however some key bindings to access the customization buffer for some of those. They are listed just below, here:</li> </ul>		
Permanently change the cursor's color See also: <u>Cursor</u>	<f11> <f2> E C-c</f2></f11>	( pel-customize-cursor &optional OTHER-WINDOW)	Quicks access to the customize buffer to set the cursor default color.  • It sets the color permanently if the customization is saved.  • Only available in graphics mode.
