Emacs support for Elixir Programming Language

<u>Description</u>	<u>Keystroke</u>	Function	Note	
Elixir Editing	Elixir support is very basic, it PEL supports Elixir when On Emacs >= 30, PEL You can activate tree-si See <u>Tree Sitter</u> and PEL supports the following	is not yet fully implemented no pel-use-elixir user options is supports tree-sitter if pel-use-elixir by setting pel-use. Tree-sitter In package PEL activates it package PEL activates PEL activ	or fully documented. turned on.

Open this PDF file. See also: <u>∑ Help/Info</u>	<f11> SPC x <f1> <f12> <f1></f1></f12></f1></f11>	(pel-help-pdf &optional OPEN-WEB-PAGE)	Open the <u>\$\Pi\Lambda\text{T}\text{-Elixir}\text{ local PDF.} If the prefix argument (like C-u or M) is used, then it opens the remote GitHub hosted raw PDF instead. If the pel-flip-help-pdf-arg user-option is set it's the other way around.</u>	
<u>∑ Customize</u> PEL Elixir support	<f11> SPC x <f2> <f12> <f2></f2></f12></f2></f11>	(pel-customize-pel &optional OTHER-WINDOW)	Customize PEL Elixir support: alchemist, alchemist-iex. • If OTHER-WINDOW is non-nil (use C-u), display in another window.	
∑ Customize Emacs Elixir support	<f11> SPC x <f3> <f12> <f3></f3></f12></f3></f11>	(pel-customize-library &optional OTHER-WINDOW)	Customize Emacs Elixir support: alchemist, alchemist-iex. • If OTHER-WINDOW is non-nil (use C - u), display in another window.	
Show PEL setup for Elixir	<f11> SPC g ? <f12> ?</f12></f11>	(pel-elixir-setup-info &optional APPEND)	Display Elixir setup information inside a *pel-elixir-info* buffer with buttons providing quick access to the customization buffer of each variable shown. The information shown includes the value and interpretation of: • pel-use-elixir (whether the classic or tree-sitter based major mode is used). • the user options controlling indentation and hard tab width rendering. To append information in the buffer instead of clearing the previous content type any prefix argument (such as C-u) before the command keystroke.	
Search Support	In Elixir mode, the superword mode can be useful since snake case is often used. Using superword-mode helps searching. PEL activates the superword mode by default in Elixir mode. To change this use the <f11> t <f2> to access the customize buffer.</f2></f11>			
Toggle superword-mode See also: • ∑ Text Modes • ∑ Search/Replace	<f11> t m p <f12> M-p</f12></f11>	(superword-mode &optional ARG)	Toggle superword-mode: a minor mode that treats <u>snake case</u> as one word. In Elixir '_' are treated as part of words. • With a prefix argument ARG, enable superword mode if ARG is positive, and disable it otherwise. • PEL provides the <f12> M-p key for the programming language modes where <u>snake case</u> is popular (Emacs Lisp, C, C++, Erlang, Python, etc)</f12>	
Elixir Shell	The following commands are used to explicitly launch an Elixir shell inside Emacs.			
Start Elixir Shell	<f11> z r x <f12> z</f12></f11>	(alchemist-iex-run &optional <u>ARG</u>)	 Start an IEx process. Show the IEx buffer if an IEx process is already run. Requires elixir-mode and alchemist external packages. PEL activates these when pel-use-elixir and pel-use-alchemist user-options are turned on (set to t).
