## File Management

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>		
File Handling		set of commands to open files ctory content, etc These are	(Emacs documentation uses the term "finding" files for that), saving files searching for files or file		
See also:  • <u>&gt; Dired</u>	The directory editing	(dired) commands are mainly li	sted in the <u><b>Dired</b></u> table.		
• <u>∑ Customize</u>			packages that provide useful commands. PEL supports several of them, listed below.  Les to activate, deactivate and modify the behaviour of these packages.		
	The state of the s		o access PEL activation group and <f3> to access the external package customization groups.  values, apply or save them and then either execute M-x pel-init or restart Emacs.</f3>		
	PEL provides integration	n with the following Emacs buil	t-in libraries or functionalities:		
			vide several commands to open file at point.		
		ctivated by <b>pel-use-recentf</b> to	e-fzf to provide fast fuzzy finder using fzf.		
			tivated by pel-update-time-stamp.		
	· ·		ve activated by pel-update-copyright.		
• <u>∑ Key-Chords</u>	• It also provides integration with the following external packages when the corresponding PEL user-option is activated:    Value				
	rfc-mode activated by pel-use-rfc-mode, provides ability to download and browse IETF RFC documents easily (see RFC editor).				
		ivy/counse1 activated by pel-use-counsel provides completion for some file commands. PEL supports more. See <u>Completion/Input</u> .			
	NeoTree		tree provides an alternative to <u>Dired</u> to navigate a file directory.		
	treemacs  ztree	macs provides project-oriented file directory navigation. See <u>SX Treemacs</u> e an other alternative to <u>S Dired</u> to navigate a file directory.			
Open this PDF file.	<f11> f <f1> 1</f1></f11>	(pel-help-pdf &optional	Open the ∑File-mngt local PDF. If the prefix argument (like C-u or M) is used, then open remote		
See also: <u>Nelp/Info</u> Customize PEL File/	<f11> f <f2> 1</f2></f11>	(pel-customize-pel	GitHub hosted raw PDF instead. If <b>pel-flip-help-pdf-arg</b> user-option is set it's the other way around.  Customize PEL support for file management.		
Directory Management		&optional OTHER-WINDOW)	If OTHER-WINDOW is non-nil (use C-u), display in other window.		
∑ Customize Emacs file management support	<f11> f <f3></f3></f11>	(pel-customize-library &optional OTHER-WINDOW)	Customize Emacs support for file management. Includes the following: files, fzf, recentf, popup-switcher.		
Customize Emacs support for file revert	<f11> f r <f3></f3></f11>	(pel-customize-library &optional OTHER-WINDOW)	Customize Emacs support for file automatic revert management.		
Customize ffap (find file at point)	<f11> f a <f3></f3></f11>	(pel-customize-library &optional OTHER-WINDOW)	Customize Emacs support for management of ffap (find file at point).		
Show file mngt status	<f11> f ?</f11>	(pel-show-filemng-status)	Display status of various file management controls: encoding, resolving relative path method, etc		
Open File in OS application	The following command See: <u>Notice</u> Direct, <u>Notice</u> Web	d opens file(s) outside Emacs, u	sing OS applications registered with the file type.		
Open currently file	<f11> f C-o</f11>	(pel-open-buffer-file-in-os-	Open the file in the present buffer with the OS-registered application.		
visited in current buffer with the default OS application.		app &optional <u>FNAME</u> )	<ul> <li>If the buffer is modified, prompt to save buffer first.</li> <li>In dired-mode buffers, open each marked files in its S-registered applications.</li> <li>Inside a dired-mode buffer you can also type z to open the current file or all selected files.</li> </ul>		
Opening file		ds are available to open/visit file corresponding ido mode func	es in Emacs buffers. Note: Emacs uses the word "visiting" instead of "opening" files. tion is also shown.		
	The command used to 'visit' a file, find-file is Emacs default. It supports Emacs' basic tab completion. Packages that support other completion mechanisms can be installed and activated and then the command uses a different completion mechanism.				
	1		whether you want to use one or several other completion mechanisms. It also has a command to		
See <u>Sompletion/</u> Input.		on mechanism dynamically. You on/Input and <b>∑ Customize</b> tal	u can change it without restarting Emacs or event re-executing pel-init. bles for more info.		
	File Lock : Emacs pro	tects against multiple processe	es modifying the same file with a lock. If you attempt to edit the buffer of a locked file, or save a buffer		
Onen file onen dieleg		,	steal the lock (with 's'), 2) proceed ('p') to edit the file anyway or 3) quit ('q').		
Open file-open dialog  Open (visit) a file/	೫-ο • <f11> f f</f11>	(ns-open-file-using-panel) (find-file FILENAME	On macOS in graphics mode only: open a file, select the file name via an OS File dialog.  Prompt for the file or directory name to open. Open the selected file/directory in a buffer with the		
directory	• <m-f11> M-f</m-f11>	&optional WILDCARDS)	appropriate mode. For directory, the buffer opens in Dired-mode.		
See also:	M-f • C-x C-f		<ul> <li>With PEL, the <f11> f and <m-f11> M-f M-f key bindings are always available, regardless of what completion mechanism is in use. It can be used as a fallback when testing</m-f11></f11></li> </ul>		
<ul> <li>∑ Completion/Input</li> <li>∑ Dired</li> </ul>			various completion packages. I have seen some of them fail and break Ido.    Note that <m-f12> M-f M-f is also available in some major modes to open files in a way that</m-f12>		
• <u>S Customize</u>			takes the major mode into account, like providing a list of files in the project. See major mode pages.		
		(ido-find-file)	Same as above with Ido completion. See <u>Sompletion/Input</u> for available completion modes.		
			The ido-use-filename-at-point user-options control whether ido-find-file uses the file name at point as the basis for selecting the file name to open. Use <f11> f M to dynamically change it.</f11>		
			efault completion. When Ido is used, the ido-find-file command is used instead.		
Prevent Ido expansion	• Type C-f or C-x	<ul> <li>When ido mode is used, you can also:</li> <li>Type C-f or C-x f to change to original find-file mode and prevent Ido completion from trying to provide the name of an existing file when you want to specify the name of a file that does not exists yet.</li> </ul>			
with <b>C−j</b>	Type C-j to accept	the file/directory name verbati	m without replacement or suggestion. Also useful to open a directory in dired mode.		
Change input	To open a file in re		ne of the commands below (C-x C-r, etc)  -x C-f then type C-x C-q to change the mode of the buffer to read-only mode.		
completion method -	Use <f11> M-c <f4< td=""><td></td><td>pletion method. See <u>Sempletion/Input</u>.</td></f4<></f11>		pletion method. See <u>Sempletion/Input</u> .		
Open file via popup menu	<f11> f M-f</f11>	(pel-psw-navigate-files)	Open file from a pop-up menu listing files in current directory. Uses (psw-navigate-files ".").  • Narrow menu list by typing part of the file name. You can also select directory names.  • Requires popup-switcher 2 PEL activates when pel-use-popup-switcher is t.		
Open another file in buffer	C-x C-v	(find-alternate-file FILENAME &optional WILDCARDS)	Kills buffer and open the newly specified file in a new buffer same window. When ido-mode is used, the ido-find-alternate-file is used instead. Useful when just selected an empty file just selected by mistake.		
		(ido-find-alternate-file)			
		(ldo-lilid-alterliate-lile)			
Open file in other window	• C-x 4 f • <f11> f o</f11>	(find-file-other-window FILENAME &optional WILDCARDS)	<ul> <li>Edit file FILENAME, in another window.</li> <li>Like C-x C-f, but creates a new window or reuses an existing one.</li> </ul>

If that file does not exists it then proceed to search for it.</li> </ul>				
Select prompt method⊷	When several file n The default is a ve With ivy selecte Note that the com This allows you	If the file name is followed by line and column numbers the point is moved to that position.  When several file names are found, the command lists them and prompts using the method selected by pel-prompt-read-method user-option.  The default is a very primitive function implemented by PEL. You can select a more powerful ivy prompting instead.  With ivy selected PEL will automatically set pel-use-ivy to that the command shows all files found by the specified search method, it does not only use the first one found.  This allows you to detect potential duplication in header file names in large include paths.  It prompts for incomplete file names, allowing editing the find file (with completion), search for libraries files (type 1) according to current file type.				
Select target window -	If file is already     If no window ho window, if 2: us	<ul> <li>Without argument:</li> <li>Without argument:</li> <li>If file is already opened in a window, move point to that window and to the line column coordinates if specified following the file name at point.</li> <li>If no window holds that file, select the target window based on the number of editable windows in frame: if 1, split that window and use the new window, if 2: use the other window, if 3 or more, use the current window.</li> <li>With numeric argument N:</li> </ul>				
N>20 : open the directory ►	<ul> <li>N &lt; 0 : create a new window and use that.</li> <li>(abs N) &gt; 20: then open the directory instead of the file. Interpret the window position from the N value adjusted: N-20 (or N+20 if N is negative)</li> <li>N = 0: use the 'other' (the next) window.</li> <li>N = 1, 3, 7or above (excluding 8, 9 and 10): select the target window based on the number of editable windows in frame: <ul> <li>if 1 window: split that window and use the new window,</li> <li>if 2 windows: use the other window,</li> <li>if 3 or more windows: use the current window.</li> </ul> </li> <li>N is: 8: up, 2: down, 4:left, 5:current, 6:right.</li> </ul>

ffap commands	Emacs provides the ffap (find file at point) command set. The ffap command is similar to pel-find-file-at-point-in-window but does not support line and numbers, does not support identifying a window with command arguments and is not designed to support multiple programming languages. It does however support other facilities and can be installed to replace the behaviour of standard file management command bindings such as C-x C-f.  PEL activates the Emacs built-in ffap library when the pel-use-ffap user option is set to either t or to ffap-bindings. In both cases these activate the key bindings shown below.  When pel-use-ffap is set to ffap-bindings, then PEL also activates the standard ffap bindings which take over the behaviour of the main file finding and dired commands. This means that Ido, Ivy or Helm are no longer available for these commands.  If pel-use-ffap is only set to t then the standard ffap bindings is not activated.					
Find file/URL at point	<f11> f a p</f11>	(ffap &optional FILENAME)	Find FILENAME, guessing a default from text around point.  If 'ffap-url-regexp' is not nil, the FILENAME may also be an URL. Web URL opens in browser.  With a prefix, this command behaves exactly like 'ffap-file-finder'.  If 'ffap-require-prefix' is set, the prefix meaning is reversed.  See also the variables 'ffap-dired-wildcards', 'ffap-newfile-prompt', 'ffap-url-unwrap-local', 'ffap-url-unwrap-remote', and the functions ffap-file-at-point' and 'ffap-url-at-point'.			
Find file/URL at point - read only	<f11> f a P</f11>	(ffap-read-only)	Like 'ffap', but mark buffer as read-only.			
Find another file/URL at point in window	<f11> f a v</f11>	(ffap-alternate-file)	Like 'ffap' and 'find-alternate-file': kills current buffer and open new file in the same window.			
Find file/URL in other window	<f11> f a w</f11>	(ffap-other-window)	Like 'ffap', but put buffer in another window.			
Find file/URL in other frame	<f11> f a f</f11>	(ffap-other-frame)	Like 'ffap', but put buffer in another frame.			
Find file/URL in other window - read only	<f11> f a W</f11>	(ffap-read-only-other- window)	Like 'ffap', but put buffer in another window and mark as read-only.			
Find file/URL in other frame - read only	<f11> f a F</f11>	(ffap-read-only-other-frame)	Like 'ffap', but put buffer in another frame and mark as read-only.			
Start Dired with file at point	<f11> f a d</f11>	(dired-at-point &optional FILENAME)	Start Dired, defaulting to file at point. See 'ffap'.			
Start Dired with file at point in other window	<f11> f a D</f11>	(ffap-dired-other-window)	Like 'dired-at-point', but put buffer in another window.			
Start Dired with file at point in other frame	<f11> f a M-d</f11>	(ffap-dired-other-frame)	Like 'dired-at-point', but put buffer in another frame.			
List directory of file at point	<f11> f a l</f11>	(ffap-list-directory)	Like 'dired-at-point' and 'list-directory'.			
Open a menu of all files, URL in current buffer.	<f11> f a m</f11>	(ffap-menu &optional RESCAN)	Put up a menu of files and URLs mentioned in this buffer. Set mark, jump to choice, and try to fetch it. The menu is cached in 'ffap-menu-alist', and rebuilt by 'ffap-menu-rescan'.  • With prefix argument: forces a rebuild. Searches with 'ffap-menu-regexp'.			

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>	
Fuzzy File Finders	1. install and configure	the fzf command line utility,	and use one of the following package to use the corresponding commands:	
	<ol> <li>the <u>fzf.el</u> ext</li> <li>the <u>ivy/cou</u></li> </ol>	· · · · — —	tivated by <b>pel-use-fzf</b> . The fzf commands below are available when this is active.  tivated by <b>pel-use-counsel</b> . The counsel commands below are available when this is active.	
Open file searched by fzf in current directory	• <f11> M-z M-z • <f11> f z</f11></f11>	(fzf)	Open a file selected by fzf session in the current directory. Type partial file name, use fzf filter expressions. Select one file and hit return to open it inside current window.	
Open file searched by fzf in specified directory	• <f11> M-z M-d • <f11> f d</f11></f11>	(fzf-directory)	Prompt for a directory to perform the fzf file search, then open selected file inside current window. Directory prompt uses current completion mode. See <u>Completion/Input</u> .	
Open fzf searched file in current or specified directory using ivy I/F	<f11> f c</f11>	(counsel-fzf &optional INITIAL-INPUT INITIAL- DIRECTORY FZF-PROMPT)	Open a file selected by ivy-style prompt using a fzf shell command.  • With <b>C-u</b> prefix argument first prompts for the directory to perform the fzf search.  • For large directories this is much slower than the fzf commands above because it populates a list first from running fzf instead of providing access to the fzf process directly.	
Switch buffer with fzf	<f11> b z</f11>	(fzf-switch-buffer)	Switch buffer in current window by selecting it with fzf.  • Uses the fzf command line utility for fast & flexible search.  Requires the fzf.el external package activated by pel-use-fzf.	
Search/open Git repo member files with fzf	<f11> f g</f11>	(fzf-git-files)	Search Git repository member files in current Git repository with fzf and open user selected file.	
Search/open file in Git repo directory tree with fzf	<f11> f G</f11>	(fzf-git)	Search all files in current Git repository with fzf and open user selected file.	
Search/open file in Mercurial repo directory tree with fzf	<f11> f H</f11>	(fzf-hg)	Search all files in current Mercurial repository with fzf and open user selected file.	
Search/open file in current projectile project with fzf.	<f11> f <f8></f8></f11>	(fzf-projectile)	Search all files in current projectile project with fzf and open selected file.  Requires the fzf.el external package activated by pel-use-fzf	
See <u>▼</u> Projectile  Grep search files with	<f8> M-z</f8>	(fzf-grep)	Requires the <u>projectile</u> external package activated by <u>pel-use-projectile</u> Prompt for string to search and file grep selection expression, show grep results in a fzf session,	
fzf for specified regex  Grep search files with	<f11> g S</f11>	(fzf-grep-in-dir)	select appropriate line to open the specific file at appropriate line.  Prompt for directory, then for string to search and file grep selection expression, show grep results in	
fzf for specified regex in specified directory	<fir> g s</fir>	(izi-grep-iii-dii)	a fzf session, select appropriate line to open the specific file at appropriate line.	
Grep search Git repo member files with fzf for specified regex	<f11> g G</f11>	(fzf-git-grep)	Prompt for string to search and file grep selection expression, show grep results over current Git repo searched in a fzf session, select appropriate line to open the specific file at appropriate line.  This command does not seem to work properly, it searches but does not always open the file.	
Open <u>Dired</u> (Directory Editor)	When "opening" (visiting) a directory Emacs opens a buffer in Dired mode, that looks like a ls -l output, which allows several operations. If you specify a directory path to Cx C-f then Dired-mode is used. You can also use the following commands to open buffer in Dired mode.			
(Directory Editor)	It's also possible to The Speedbar ca		n file tree browsers, like NeoTree and Ztree, described below in this table.	
Open a directory editor See also: <u>Dired</u> <u>Completion/Input</u>	• C-x d • ₩-D	(dired DIRNAME &optional SWITCHES)     (ido-dired)	Opens a Dired-mode buffer on the specified directory. Prompt for the directory name.  PEL activates ido when the pel-use-ido-mode user option is set to t.  See <u>Sompletion/Input</u> for completion modes available at the prompt.	
Run Dired in other (next) window	C-x 4 d	(dired-other-window)	Opens a Dired-mode buffer on the specified directory inside another window.  Prompt for the directory name.	
List Directory See also: Sompletion/Input	C-x C-d	(list-directory DIRNAME &optional VERBOSE)	Display a list of files in or matching DIRNAME, a la 'ls'.  • DIRNAME is globbed by the shell if necessary.  • Prefix arg (C-u) means supply -l switch to 'ls'.	
Activating URLs to browse and open files	Emacs provides the <b>goto-url-mode</b> and the <b>goto-url-prog-mode</b> that turn URLs found in the current buffer into clickable buttons.  Once the mode is active the following key sequences are available wheel point is over a URL button:  C-c RET or the mouse to click on the button.  If the URL is an email address a buffer to write an email to that address opens.  If the URL is a web or FTP address the system browser is invoked to open the address.  C-c C-n: move point to the end of the next URL in the buffer.  C-c C-p: move point to to the previous URL in the buffer.  C-c C-f: download the file identified by the URL into a local temporary file and visit the file. See (pel-open-url-at-point) above.			
Toggle goto-address- mode	<f11> f u</f11>	(goto-address-mode &optional ARG)	Minor mode to buttonize URLs and e-mail addresses in the current buffer.  With a prefix argument ARG, enable the mode if ARG is positive, and disable it otherwise.	
Toggle goto-addrress- prog-mode	<f11> f U</f11>	(goto-address-prog-mode &optional ARG)	Like 'goto-address-mode', but only for comments and strings.	
Open the URL (email or web page)	C-c RET	(goto-address-at-point &optional EVENT)	Open the URL at point:  If URL is a web page: open it in a browser  If URL is a mail address:  Send mail to address at point:  Find e-mail address around or before point. Then search backwards to beginning of line for the start of an e-mail address.  If no email address is found there, then load the URL at or before point.	
Move to end of next URL in buffer	C-c C-n	(pel-goto-next-url)	Move point forward to the end of the next URL located in the current buffer.  • The global <f6> C-n key binding activates the goto-address-mode if it is not already active.</f6>	
See also: <u>Navigation</u> Move to beginning of	<f6> C-n C-c C-p</f6>	(pel-goto-previous-url)	Move point backward to the beginning of the previous URL located in the current buffer.	
previous URL in buffer See also: Navigation	<f11> C-p</f11>	(Por Soro-biorious-uii)	The global <f6> C-p key binding activates the goto-address-mode if it is not already active.</f6>	
Insert text of another file at point	The following commands can be used to insert text from other files at point in the current buffer.			
Insert file at point	• C-x i • <f11> f i</f11>	(insert-file FILENAME)     (ido-insert-file)	Insert contents of file FILENAME into buffer after point.  • Set mark after the inserted text.	
Insert file literally at point	<f11> f I</f11>	(insert-file-literally FILENAME)	Insert contents of file FILENAME into buffer after point with no conversion.  Set mark after the inserted text.	

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>	
Write text into specified file	The following command	ds can be used to write text se	lected from current buffer into specified file.	
Write region text to file	<f11> f w</f11>	(write-region START END	Write current region into specified file.	
White region text to life	NIII W	FILENAME & Optional APPEND VISIT LOCKNAME MUSTBENEW)	Prompts for the specified file.	
Append region text to file	<f11> f W</f11>	(append-to-file START END FILENAME)	Append the contents of the region to the end of file FILENAME.  • Prompts for the specified file.	
Set file mode	<f11> f m</f11>	(set-file-modes FILENAME MODE)	Set mode bits of file named FILENAME to MODE (an integer).  Only the 12 low bits of MODE are used.  Prompts for file name and then for chmod-like file mode value.	
Reverting Files	If you want to use Emvariable to a list of reg	nacs to monitor the content of a gular expressions describing the	to refresh the Emacs buffer visiting that file, you need to "revert" the file.  a file that is continuously modified by an external process (like a log file) set the <i>revert-without-query</i> le field it'll apply to.  urrent buffer or globally and restart its timer.	
Revert a buffer	• <f11> f r f • %-u</f11>	(revert-buffer &optional IGNORE-AUTO	Replace current buffer text with the text of the visited file on disk.  This undoes all changes since the file was visited or saved.	
See also: <u><b>∑ Diff &amp; Merge</b></u>	00-u	NOCONFIRM PRESERVE- MODES)	<ul> <li>With a prefix argument, offer to revert from latest auto-save file, if that is more recent than the visited file.</li> <li>This is also the command to use to reload a file that was modified on the file system.</li> <li>You can use ediff-current-file to see the difference between the buffer and its disk file. PEL binding for this is <f11> e b f.</f11></li> </ul>	
Toggle auto-revert mode	<f11> f r a</f11>	(auto-revert-mode &optional ARG)	Toggle reverting buffer when the file changes (Auto-Revert Mode).  With a prefix argument ARG, enable Auto-Revert Mode if ARG is positive, and disable it otherwise.  • Auto-Revert Mode is a minor mode that affects only the current buffer. When enabled, it reverts the buffer when the file on disk changes.  • When a buffer is reverted, a message is generated. This can be suppressed by setting 'auto-revert-verbose' to nil.	
Toggle auto-revert tail mode	• <f11>   t • <f11> f r t</f11></f11>	(auto-revert-tail-mode &optional ARG)	Toggle reverting tail of buffer when the file grows.  • With a prefix argument ARG, enable Auto-Revert Tail Mode if ARG is positive, and disable it	
See also: <u><b>∑ Scrolling</b></u>			<ul> <li>otherwise.</li> <li>When Auto-Revert Tail Mode is enabled, the tail of the file is constantly followed, as with the shell command 'tail -f'. This means that whenever the file grows on disk (presumably because some background process is appending to it from time to time), this is reflected in the current buffer.</li> <li>You can edit the buffer and turn this mode off and on again as you please. But make sure the background process has stopped writing before you save the file!</li> </ul>	
Cancel/restart auto- revert timer	<f11> f r SPC</f11>	(pel-auto-revert-set-timer)	Restart or cancel the timer used by Auto-Revert Mode. If such a timer is active, cancel it.	
ievert unier	Restarting the timer e     : pel-auto-revert-se	ensures that Auto-Revert Mode t-timer is a thin wrapper over a	ve or if Auto-Revert Mode is active in some buffer. will use an up-to-date value of 'auto-revert-interval' (which is normally 5 seconds by default). uto-revert-set-timer that displays a warning if executed when the buffer is not already in auto-revert-when auto-revert-set-timer is executed.	
Saving Files		nands to save the content of a		
	Action  Delete trailing space override it for some	<ul> <li>PEL supports the following controllable actions on file save. Each of these actions are activated via an action-specific PEL user-option, and can temporarily be disabled with a command for the file in the current buffer. The actions and their associated user-option and command are listed here:</li> <li>Action</li></ul>		
Save file to disk	• C-x C-s • %-s	(save-buffer &optional ARG)	Save current buffer to associated file. By default, it makes the previous version into a backup file if previously requested or if this is the first save.  • With C-u: marks this version to become a backup when the next save is done  • With C-u C-u: makes the previous version into a backup file  • With C-u C-u: marks this version to become a backup when the next save is done, and makes the previous version into a backup file.  • With prefix 0: never make the previous version into a backup file.  • On macOS in graphics mode only: %-s brings a OS file-save dialog.  A save and activated on-file-save actions only occur when the buffer is in "changed" status. Use M to flip that status to force an action when it has just been activated.	
Save all/some files	C-x s	(save-some-buffers &optional ARG PRED)	Prompt for files that are modified. Options:  • y : save  • n : don't save  • C-r : look at the buffer in question  • d : view differences with diff-buffer-with-file	
Write buffer to specified file  Save As	C-x C-w	(write-file FILENAME &optional CONFIRM)     (ido-write-file)	Similar to "Save-As": prompt for the filename.  • Can also be yanked in the mini buffer, use M−n to edit it.  Use that command to rename the file.	
Changed current buffer changed state	M	(not-modified &optional ARG)	Mark current buffer as unmodified, not needing to be saved.  • With <b>C</b> - <b>u</b> prefix ARG, mark buffer as modified, so <b>C</b> - <b>x C</b> - <b>s</b> will save.	
Toggle copyright update on save	<f11> M-@</f11>	(pel-toggle-update- copyright-on-save &optional GLOBALLY)	<ul> <li>Toggle copyright update on file save and display current state.</li> <li>By default change behaviour for local buffer only.</li> <li>When GLOBALLY argument is non-nil, using any prefix argument, change it for all buffers for the current Emacs editing session (the change does not persist across Emacs sessions).</li> <li>To modify the global state permanently modify the customized value of the 'pel-update-copyright' user option via the 'pel-pkg-for-filemng' group customize buffer with <f11> f <f2> 1.</f2></f11></li> <li>This command is only available when the pel-update-copyright is set to t.</li> </ul>	
Toggle timestamp update on save	<f11> M-T</f11>	(pel-toggle-update-time- stamp-on-save &optional GLOBALLY)	Toggle time-stamp update on file save and display current state.  • By default change behaviour for local buffer only.  • When GLOBALLY argument is non-nil, using any prefix argument, change it for all buffers for the current Emacs editing session (the change does not persist across Emacs sessions).  • To modify the global state permanently modify the customized value of the 'pel-update-time-stamp' user option via the 'pel-pkg-for-filemng' group customize buffer with <f11> f <f2> 1.</f2></f11>	
Toggle delete trailing space on save See also:   Whitespace	• <f11> M-W • <f11> t w M-W</f11></f11>	(pel-toggle-delete-trailing- space-on-save &optional GLOBALLY)	Toggle deletion of trailing spaces on file save and display current state.  • By default change behaviour for local buffer only.  • When GLOBALLY argument is non-nil, using any prefix argument, change it for all buffers for the current Emacs editing session (the change does not persist across Emacs sessions).  Trailing whitespace deletion is automatically activated on file save when the pel-delete-trailing-whitespace user-option is set to t. Use this command to de-activate it or re-activate it.  • To modify the global state permanently modify the customized value of the 'pel-delete-trailing-whitespace' user option via the 'pel-pkg-for-filemng' group customize buffer with <f11> f <f2> 1.</f2></f11>	

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>	
Inserting & Automatically Updating Copyrights	Emacs has built-in support for insertion and update of copyright notices inside files.  • Two commands, shown below, are provided to manually insert or update the file's copyright notice.  • The copyright notice can be automatically updated by adding the copyright-update function to the list of before-save-hook variable with the following code:  (add-hook 'before-save-hook 'copyright-update)			
<u> </u>	To be automatically updated, the copyright notice must be placed within an area at the beginning of the file specified by the value of the <b>copyright-limit</b> variable, normally defined as the first 2000 characters. This variable is customizable.			
Insert copyright notice at point See also: <u>Notice Inserting</u> <u>Text</u>	<f11> i C</f11>	(copyright &optional STR ARG)	Insert a copyright by \$ORGANIZATION notice at cursor.  • If the ORGANIZATION environment variable is not available, Emacs prompts for it.	
Update file's copyright notice	M-x copyright- update	(copyright-update &optional ARG INTERACTIVEP)	Update copyright notice to indicate the current year.  • With prefix ARG, replace the years in the notice rather than adding the current year after them. If necessary, and 'copyright-current-gpl-version' is set, any copying permissions following the copyright are updated as well.	
			bes not warn if there is no copyright in the current buffer to update.	
	<ul> <li>It does not create a missing notice.</li> <li>If you want to be prompted automatically to update an existing but out-of-date copyright notice, write the following inside your init.el file:         <ul> <li>(add-hook 'before-save-hook 'copyright-update)</li> </ul> </li> </ul>			
Automatic File Time Stamp on file save	This can either be done (add-hook ': • The time stamp will b • Time-stamp: <	Emacs has a built-in automatic time-stamping of files. It must be activated by adding the time-stamp function to the before-save-hook variable.  This can either be done via Emacs customization system or explicitly inside your init file with the following code:  (add-hook 'before-save-hook 'time-stamp)  The time stamp will be added to files that contain, inside their first 8 lines, a line that looks like one of the following:		
References:  • <u>TimeStamps @</u> EmacsWiki		change these defaults and get E	Emacs to update all sorts of time stamp formats, even inside source code statements:	
Change time stamp format in:     markdown file     reStucturedText file	• time-stamp • time-si • time-si • time-si	-pattern consists of 4 parts, ea tamp-line-limit: identifies when tamp-start: identifies the text p tamp-end: identifies the end of		
See also: ∑Inserting Text	<ul> <li>time-stamp-format specifies the format of the time stamp.</li> <li>Something like "%:y-%02m-%02d %02H:%02S %u" to specify the date and time in ISO format, with the user login's name.</li> <li>time-stamp-time-zone specifies the time zone selection:</li> <li>nil: Emacs local time</li> <li>t: Universal time</li> <li>wall : system wall clock time</li> <li>TZ : controlled by a TZ environment variable</li> <li>The time-stamp-format and time-stamp-time-zone variables can be set in your init file or via the Emacs customization system.</li> </ul>			
	<ul> <li>They are defined in the time-stamp customization group.</li> <li>To change the format or the pattern preceding or after the automatically updated time stamp, it is best to use file local variables: this will allow automatic time stamp updates in files with various formats. As an example, see the top and end of the PEL manual raw format file.</li> <li>By default, the time-stamp string must be placed within the first 8 lines of the file, otherwise it will not be updated automatically.</li> <li>If you want it located somewhere else in your file set the time-stamp-line-limit file local variable.</li> </ul>			
	PEL provides the extra user-option to control the automatic generation of time-stamps:  • pel-update-time-stamp user-option controls whether time-stamps are automatically update time stamps in all files where a valid time-stamp corresponding to Emacs settings as described above. Set it to t (the default) to allow automatic time stamp updates. Set it to nil to prevent the can also toggle it globally for the current editing session by using the <f11> f M-t key sequence.  ▼ To insert a non-updatable time stamp, the PEL package provides a set of text insert commands which include inserting a time stamp.  • See the  Inserting Text table for the appropriate commands.</f11>			
Update file time stamp	<f11> f t</f11>	(time-stamp)	Force update the time stamp string(s) in the current buffer.  • Updates a time stamp of format recognized by <i>Emacs current settings</i> even when automatic time-stamp update is off.  • More information about the " <i>Emacs current settings</i> " in the description block above.	
Toggle time stamp automatic update	<f11> f M-t</f11>	(time-stamp-toggle-active &optional ARG)	Toggle 'time-stamp-active', setting whether <f11> f t updates a buffer.  • With ARG, turn time stamping on if and only if arg is positive.</f11>	
RFC-Mode	Browsing and reading F	RFC Files with the following rfc-	mode commands. PRequires ric-mode activated by pel-use-ric-mode,	
Read a specific RFC	<f11> B r</f11>	(rfc-mode-read NUMBER)	Read the RFC document NUMBER. Offer the number at point as default.	
Browse RFCs	<f11> B R</f11>	(rfc-mode-browse)	Browse through all RFC documents referenced in the index.	
<u>Directory Tree</u> <u>Browsers</u>	Emacs supports mechanisms to browse file directories. This includes:  • Emacs built-in <u>Directory</u> directory editor, along with several extensions. You can have several different Direct buffers in an Emacs session.  • The Emacs built-in <u>Sepeedbar</u> and its extensions. There can only be one instance of a Speedbar buffer and that can be inside another frame.  • Several other external packages: <u>Neotree</u> , treemacs and <u>Ztree</u>			
<u>View Directory</u> <u>Tree with NeoTree</u>	The NeoTree external package provides a Vim-NerdTree like tree-view of a directory with expansion/collapse.  PEL activates it when pel-use-neotree is set to t.  • <f11> B N <f2> opens the PEL customization group to set pel-use-neotree.</f2></f11>			
	<ul> <li><f11> B N <f3> prompts, select neotree to open the neotree customization group.</f3></f11></li> <li>There is only one NeoTree window. It is a dedicated window.</li> <li>Icons used in the tree can be changed:         <ul> <li>In text mode set pel-neotree-font-in-terminal to arrows to use arrows instead of '+'.</li> <li>In graphics mode, if pel-neotree-font-in-graphics is set to icons then the icons provided by all-the-icons package is used.</li> </ul> </li> <li>However, once PEL has installed the package it does not install the fonts.         <ul> <li>You must install the fonts manually by executing: M-x all-the-icons-install-fonts</li> </ul> </li> </ul>			
View directory tree with NeoTree	<f11> B N N</f11>	(neotree-toggle)	Toggle show/hide the NeoTree window.	
	In the NeoTree buffer the following keys are available:  • n next line, p previous line.  • > end of buffer, < top buffer  • SPC or RET or TAB: Open current item if it is a file, Fold/Unfold current item if it is a directory.  • U Go up a directory  • g Refresh  • A Maximize/Minimize the NeoTree Window  • It Toggle display hidden files. Controlled by neo-hidden-regexp-list user option.  • O Recursively open a directory  • C-c C-n Create a file or create a directory if filename ends with a '/'  • C-c C-d Delete a file or a directory.  • C-c C-r Rename a file or a directory.  • C-c C-p Copy a file or a directory.  • C-c C-p Copy a file or a directory.			
Open NeoTree for dir of current buffer	<f11> B N F</f11>	(neotree-find &optional PATH DEFAULT-PATH)	Open a NeoTree window using the directory of the current buffer. No prompt.	
Open NeoTree for specified directory	<f11> B N D</f11>	(neotree-dir PATH)	Prompt for a directory. Open a Neotree window for that directory.	
	l	1	6	

<u>Operation</u>	<u>Keystroke</u>	Function	<u>Note</u>		
Close NeoTree window	<f11> B N H</f11>	(neotree-hide)	Close the NeoTree window.		
Show NeoTree window	<f11> B N S</f11>	(neotree-show)	Show the NeoTree window.		
Treemacs  • Manipulate directory trees associated as projects/workspaces  • Manipulate the directories and files	The treemacs external package provides a workspace/project oriented tree-based view with expansion/collapse and actions of directories and files.  PEL activates treemacs when the pel-use-treemacs user-option is turned on (set to t).  Treemacs has a large number of user-options in the treemacs customization group and sub-groups.  PEL <f11> B <f3> key sequence gives access to the customization group.  On PEL, open (or close) the treemacs buffer with the <f11> B T key sequence.</f11></f3></f11>				
**	<ul> <li>In graphics mode the</li> </ul>	<ul> <li>In graphics mode the mouse provides access to most commands.</li> <li>In terminal (and graphics) mode when pain is inside the treemacs dedicated window, the treemacs major mode key-bindings, listed below, are available.</li> </ul>			
See: <u><b>∑</b>X Treemacs</u>	The treemacs-mode an	d extensions have an extensive	e command set. See <a href="mailto:&gt;becommand.set">\sum x Treemacs</a> for the complete list		
Open/close treemacs	<f11> B T</f11>	(treemacs)	Initialise or toggle treemacs. See **\sum X** Treemacs** for treemacs-mode commands.  If the treemacs window is visible hide it.  If a treemacs buffer exists, but is not visible show it.  If no treemacs buffer exists for the current frame create and show it.  If the workspace is empty additionally ask for the root path of the first project to add.		
View Directory Tree with ZTree	The <u>ztree</u> external package provides a text-based tree-view of a directory with expansion/collapse.  PEL ztree customization:  • <f11> B <f2> opens the PEL customization group (select the tree subgroup) . See also: Customize.  • We PEL activates it when pel-use-ztree is set to t.  • Modify one of the following PEL provided customization user options:  • pel-ztree-dir-move-focus : set to t to move focus to new entry when <ret> is typed.  • pel-ztree-dir-filter-list : add a list of regexp to ignore more file. Do not enter quote for string.  For example, to ignore the .pyc files, enter ^.*pyc on a line.  • pel-ztree-show-filtered-files : set to t to display filtered files until H is typed. Normally they are not shown until H is typed.  • <f11> B <f3> prompts, select ztree to open the ztree customization group itself.  1. Execute M-x pel-init after settling and applying new values to activate the new values.</f3></f11></ret></f2></f11>				
View directory as tree with ztree-dir	<f11> B Z</f11>	(ztree-dir PATH)	Open an interactive buffer with the directory tree of the PATH given.  Opens the tree buffer in the current window.  There can be several buffers with different ztree-dir trees.		
		In the Ztree Dir buffer the following keys are available:  > : narrow/display directory on current line			
Searching/Finding Files See also:	The following commands can be used to search for file by name or content.  See: Video: .Emacs #6 : searching and finding files.  Use man to get more information,  on locate: <f11> ? m locate  on find: <f11> ? m find</f11></f11>				
• <u>S Dired</u>			ommands. For instance type ( to toggle the display of more than the file names.		
Search for file with locate	<f11> f L</f11>	(locate SEARCH-STRING &optional FILTER ARG)	Prompt for a search pattern and search for filenames using the system <b>locate</b> command line utility through the sell to search a database of all pathnames that match the specified search pattern. The database is recomputed periodically.  • The search result is shown in a '*Locate*' buffer.  • With prefix arg ARG, prompt for the exact shell command to run instead. This way you can specify options to the locate command line utility.		
		(counsel-locate &optional INITIAL-INPUT)	Call a "locate" style shell command with counsel listing and completion user-interface.  • INITIAL-INPUT can be given as the initial minibuffer input.  1 This binding activated when the pel-use-counsel user-option is turned on.  2 When pel-use-ivy-hydra user-option is set you can activate the ivy-hydra with C-o.  When Hydra is active, minibuffer editing is disabled and menus display short aliases:  Short Normal Command name  o C-g keyboard-escape-quit		
			j C-n ivy-next-line k C-p ivy-previous-line h M-< ivy-beginning-of-buffer l M-> ivy-end-of-buffer d C-m ivy-done f C-j ivy-alt-done g C-M-m ivy-call u C-c C-o ivy-occur		
Run grep via find	• <f11> f f g</f11>	(find-grep COMMAND-	Run grep via find, with user-specified args COMMAND-ARGS.		
See also: <b>∑ Grep</b>	• <f11> g f</f11>	ARGS)	<ul> <li>Collect output in a buffer.</li> <li>While find runs asynchronously, you can use the C-x command to find the text that grep hits refer to.</li> <li>This command uses a special history list for its arguments, so you can easily repeat a find command.</li> </ul>		
Search for files with 'find' and open Dired buffer	<f11> f f d</f11>	(find-dired DIR ARGS)	Prompts for the root to search from, and a <b>find</b> command to search for files with the Unix find.  • Specify the arguments for the <u>find command</u> .  • For example, to perform a case insensitive search for all .h files, use: -iname "*\.h"  • Opens a Dired-mode buffer and show the files found in there.		
Search directory for files and open Dired buffer for those	<f11> f f n</f11>	(find-name-dired DIR PATTERN)	Search DIR recursively for files matching the globbing pattern PATTERN, and run Dired on those files.  • PATTERN is a shell wildcard (not an Emacs regexp) and need not be quoted.  • The default command run (after changing into DIR) is:  findname 'PATTERN' -1s		
Find files in a directory and open Dired output	<f11> f f h</f11>	(find-grep-dired DIR REGEXP)	Find files in DIR that contain matches for REGEXP and start Dired on output.  The command run (after changing into DIR) is:  find . \( -type f -exec 'grep-program' 'find-grep-options' -e REGEXP {} \; \) -ls  where the first string in the value of the variable 'find-ls-option' specifies what to use in place of "-ls" as the final argument.		
Find Emacs Lisp files in	<f11> f f 1</f11>	(find-lisp-find-dired DIR	Find Emacs Lisp files in DIR, matching REGEXP.		
directory tree		REGEXP)	Open *Find Lisp Dired* buffer on output.
