🚧 Emacs support for the Odin Programming Language 🚧

Description	Keystroke	Function	Note
Odin Editing	Emacs does not provide any built-in mode for the **Odin Programming Language**		
	📝 To activate support for Odin on PEL, the **pel-use-odin** user-option must be turned on (set to **t**).		
	PEL provides the following user-options to download and activate Odin supporting Emacs packages.		
	📦 The **odin-mode** external package is required. 📝 PEL installs and activates it when the **pel-use-odin** user-options is set to **t**.		
	📦 The **flycheck-odin** external package is required. 📝 PEL installs and activates it when the **pel-use-flycheck-odin** user-options is set to **t**.		
	• This also automatically activates **pel-use-flycheck activating flycheck.** See also Ⅱ **SyntaxCheck**		
	• ☝ At the moment, PEL uses my forks of these 2 projects until the pull-requests I proposed get merged in.		
	🚧 PEL support for Odin is experimental, not complete. More commands should be provided and documented.		
	The Odin programming language uses the **.odin** file extension.		
Open this PDF file. See also: Ⅱ **Help/Info**	`<f11> SPC O <f1>` `<f12> <f1>`	**(pel-help-pdf** &optional OPEN-WEB-PAGE)	Open the **PL - Odin** local PDF. If the prefix argument (like **C-u** or **M--**) is used, then it opens the remote GitHub hosted raw PDF instead. If the **pel-flip-help-pdf-arg** user-option is set it's the other way around.
Ⅱ **Customize** PEL V support	`<f11> SPC O <f2>` `<f12> <f2>`	**(pel-customize-pel** &optional OTHER-WINDOW)	Customize PEL Odin support. • If OTHER-WINDOW is non-nil (use **C-u**), display in another window.
Ⅱ **Customize** Emacs V support	`<f11> SPC O <f3>` `<f12> <f3>`	**(pel-customize-library** &optional OTHER-WINDOW)	Customize Emacs Odin support: odin • If OTHER-WINDOW is non-nil (use **C-u**), display in another window.
Comments			
Toggle display of comments in buffer or active region See also: Ⅱ **Comments**	`<f11> ; ;`	**(hide/show-comments-toggle** &optional START END)	Toggle hiding/showing of comments in the active region or whole buffer. • If the region is active then toggle in the region. Otherwise, in the whole buffer. 📦 This requires the **hide-comnt.el** package (see Ⅱ **Comments**). 📝 PEL activates it when the **pel-use-hide-comnt** user option is **t**.
