Emacs support for REXX

Description	Keystroke	Function	Note
REXX programming Language Support	Support for the REXX programming language is minimal: you can activate the forth-mode package by setting the **pel-use-rexx** user option. • Files with the .rexx, .elx, .ncomm and .cpr are recognized as REXX source files and will automatically activate forth-mode if the package has been activated via that user-option. • Generic programming language features like template text insertion handle REXX comment style. See ∑ **Inserting Text** . • 📦 REXX support is provided by **rexx-mode** external package 🔗 automatically downloaded and installed by PEL when the **pel-use-rexx** user option is set to **t**.		
Open this PDF file. See also: ∑ **Help/ Info**	• **<f11> SPC R <f1>** • **<f12> <f1>**	(**pel-help-pdf** &optional OPEN-WEB-PAGE)	Open the local copy of the 𝔭𝔩 **- REXX** PDF file unless a command prefix (like **C-u**) was used. In that case it opens the Github-hosted file instead.
∑ **Customize** PEL REXX support	• **<f11> SPC R <f2>** • **<f12> <f2>**	(**pel-customize-pel** &optional OTHER-WINDOW)	Customize PEL REXX support. • If OTHER-WINDOW is non-nil (use **C-u**), display in another window.
