🚧 Emacs support for Racket, a Scheme Programming Language 🚧

Description	Keystroke	Function	Note
Racket Editing See also: • **racket-mode manual** • **ƤƖ - Scheme**	Emacs provides support for the **Racket Programming Language** via its built-in support for Scheme. It associates the .rkt files to scheme-mode. 📦To activate explicit support for Racket via the **racket-mode** external package, ☑ turn on PEL **pel-use-racket** user-option (set it to **t**). • When **pel-use-racket** is turned on the **`<f11> SPC C-r`** prefix is made available. From Racket buffer this is **`<f12>`**. The Racket file extension supported by PEL are .rkt, .rktd and .rktl. 🚧 PEL support for Racket is preliminary. More commands should be provided and documented.		
Open this PDF file. See also: ∑ **Help/Info**	**`<f11> SPC C-s C-r <f1>`** **`<f12> <f1>`**	**(pel-help-pdf** &optional OPEN-WEB-PAGE)	Open the ƤƖ - **Racket** local PDF. If the prefix argument (like **C-u** or **M--**) is used, then it opens the remote GitHub hosted raw PDF instead. If the **pel-flip-help-pdf-arg** user-option is set it's the other way around.
∑ **Customize** PEL Racket support	**`<f11> SPC C-s C-r <f2>`** **`<f12> <f2>`**	**(pel-customize-pel** &optional OTHER-WINDOW)	Customize PEL Racket support. • If OTHER-WINDOW is non-nil (use **C-u**), display in another window.
∑ **Customize** Emacs Racket support	**`<f11> SPC C-s C-r <f3>`** **`<f12> <f3>`**	**(pel-customize-library** &optional OTHER-WINDOW)	Customize Emacs Racket support: racket, scheme, geiser, quack, lispy. • If OTHER-WINDOW is non-nil (use **C-u**), display in another window.
Comments			
Toggle display of comments in buffer or active region See also: ∑ **Comments**	**`<f11> ; ;`**	**(hide/show-comments-toggle** &optional START END)	Toggle hiding/showing of comments in the active region or whole buffer. • If the region is active then toggle in the region. Otherwise, in the whole buffer. 📦 This requires the **hide-comnt.el** package (see ∑ **Comments**). ☑ PEL activates it when the **pel-use-hide-comnt** user option is **t**.
