🚧 Emacs support for OCaml 🚧

Description	Keystroke	Function	Note
OCaml Editing See: **OCaml Mode Manual**	Emacs does not provide any built-in mode for OCaml. 🔧 To activate support for OCaml on PEL, the **pel-use-ocaml** user-option must be turned on (set to **t**). • When **pel-use-ocaml is** turned on the **\<f11\> SPC o** prefix is made available. • In a OCaml buffer these commands are accessible via the **\<f12\>** key. It also activates the ability to activate minor modes for the OCaml major mode through the PEL **pel-tuareg-activates-minor-modes** user-option. PEL provides the following user-options to download and activate OCaml supporting Emacs packages. It uses the tuareg-mode as the major mode for OCaml files. 📦 The **tuareg** external package is required. 🔧 PEL installs and activates it when the **pel-use-tuareg** user-options is turned on. 📦 The **caml-mode** external package is required. 🔧 PEL installs and activates it when the **pel-use-caml-mode** user-options is turned on. 📦 The **merlin** external package is required. 🔧 PEL installs and activates it when the **pel-use-merlin** user-options is turned on. 🚧 PEL support for OCaml is not complete. More commands should be provided and documented. OCaml support is preliminary.		
Open this PDF file. See also: ∑ **Help/ Info**	**\<f11\> SPC o \<f1\>** **\<f12\> \<f1\>**	**(pel-help-pdf** &optional OPEN-WEB-PAGE)	Open the 𝔓𝔩 **- OCaml** local PDF. If the prefix argument (like **C-u** or **M--**) is used, then it opens the remote GitHub hosted raw PDF instead. If the **pel-flip-help-pdf-arg** user-option is set it's the other way around.
∑ **Customize** PEL OCaml support	**\<f11\> SPC o \<f2\>** **\<f12\> \<f2\>**	**(pel-customize-pel** &optional OTHER-WINDOW)	Customize PEL OCaml support. • If OTHER-WINDOW is non-nil (use **C-u**), display in another window.
∑ **Customize** Emacs OCaml support	**\<f11\> SPC o \<f3\>** **\<f12\> \<f3\>**	**(pel-customize-library** &optional OTHER-WINDOW)	Customize Emacs OCaml support: merlin, tuareg, tuareg-opam. • If OTHER-WINDOW is non-nil (use **C-u**), display in another window.
Comments			
Toggle display of comments in buffer or active region See also: ∑ **Comments**	**\<f11\> ; ;**	**(hide/show-comments-toggle** &optional START END)	Toggle hiding/showing of comments in the active region or whole buffer. • If the region is active then toggle in the region. Otherwise, in the whole buffer. 📦 This requires the **hide-comnt.el** package (see ∑ **Comments**). 🔧 PEL activates it when the **pel-use-hide-comnt** user option is **t**.
