F12	**PEL Mode sensitive prefix**	*Prefix: mode sensitive*	*unassigned*	*unassigned*	**PEL Mode sensitive prefix** Same as F12: helps typing sequences with Meta keys.	(pel-scroll-down &optional N)	*unassigned* ➢ ~	*unassigned* ➢ ~

Special Legend for the above table

The colour and symbols used in the above table follow the standard legend described in ➢**Legend** with the additional conventions listed here.	
unassigned	The key is not assigned by PEL.
unassigned	The key with this modifier is not accessible, and does not do anything, in terminal mode.
unassigned ➢	When pressing this key with this/these modifier(s) in terminal mode the action corresponds to the key identified after the ➢ symbol.
(toggle-frame-maximized)	In terminal mode the command toggle-frame-maximized is executed, but has no effect.
PEL Mode sensitive prefix	PEL provides mode sensitive keys that are globally accessible via the `<f11> SPACE` key sequence prefix. For example, when editing a buffer using the emacs-lisp-mode major mode, the `<f12>` prefix gives access to commands that are specific to Emacs Lisp. If you want to access the same commands while editing a buffer that use another major-mode, you can then type `<f11> SPACE l` prefix to get to the same list of commands. PEL provides a set of mode sensitive key binding sets for several major modes, but not for all of them. As time evolves the number of major modes supported will grow.
