Emacs support for Gleam 🚧

Description	Keystroke	Function	Note
Gleam Support • File associations • See also: ∑ **Speedbar**	Gleam is an experimental functional static-type checking language for the Erlang BEAM. Its support is very basic, it is not yet fully implemented nor fully documented. This is on my todo list. 📦 Requires the **gleam-mode** file 🔼 PEL installs it in the utils directory when **pel-use-gleam** user-option is set to **t**. • PEL associates the files with the .gleam file extension with gleam-mode. • PEL activates ∑ **Speedbar** support for the Gleam files when **pel-use-speedbar** user-option is on (set to **t**). • ⚠️ However the imenu support is not yet implemented, therefore identification of functions and other elements is not yet done.		
Open this PDF file. See also: ∑ **Help/Info**	`<f11> SPC M-G <f1>` `<f12> <f1>`	**(pel-help-pdf** &optional OPEN-WEB-PAGE)	Open the 🅟🅛 **- Gleam** PDF using method specified by the **pel-open-pdf-method** user-option or the alternate one if a command prefix (like **C-u**) was used.
∑ **Customize** PEL Gleam support	`<f11> SPC M-G <f2>` `<f12> <f2>`	**(pel-customize-pel** &optional OTHER-WINDOW)	Customize PEL Gleam support. • If OTHER-WINDOW is non-nil (use **C-u**), display in another window.
