The syntax of what constitutes a symbol depends on the syntax table for the buffer and therefore on the major mode of the current buffer.<br><br> In terminal mode of some Linux distribution, the M- <b>&lt;kp-add&gt;</b> is not recognized.  PEL tries to identify these systems and use another key binding identified by the <b>pel-keypad-meta+-special-sequence</b> user-option (it identifies <b>M-O 3 k</b> for Linux for instance). If the key sequence for your environment running in terminal mode is different set <b>pel-keypad-meta+-special-sequence</b> to another value: enter a string: it will be passed to the <b>kbd</b> function. |

| Deleting Text                                                                                                                                                                                                                                                                                                                        | Emacs supports “deleting” and “killing” text. Deleted text is <b>not</b> retained. Killed text is retained in the “ <b>kill ring</b> ”. Emacs kill commands erase text and copy it into the kill ring. Several commands below can show the killed text in the echo area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |            |                                    |            |                                   |          |                                    |          |                                |          |                                 |          |                         |          |                       |          |                         |          |                         |          |                        |          |                          |          |                                  |          |                           |          |                       |          |                                  |          |                                 |          |                                        |          |               |          |                                    |          |                         |  |  |

Toggle this display with <b>&lt;f11&gt; - -</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |            |                                    |            |                                   |          |                                    |          |                                |          |                                 |          |                         |          |                       |          |                         |          |                         |          |                        |          |                          |          |                                  |          |                           |          |                       |          |                                  |          |                                 |          |                                        |          |               |          |                                    |          |                         |  |  |
| Manage Kill Ring                                                                                                                                                                                                                                                                                                                     | The following are examples of commands that can be used to show the kill ring and the various variables that control it. The kill-ring is an Emacs variable. It can be manipulated by Emacs Lisp code and its content can be shown using the help variable command. The maximum number of elements inside the kill ring is also controllable.<br> See the <b>(browse-kill-ring) command above</b> . It provides ability to edit the content of the kill ring through a “Kill Ring” buffer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |            |                                    |            |                                   |          |                                    |          |                                |          |                                 |          |                         |          |                       |          |                         |          |                         |          |                        |          |                          |          |                                  |          |                           |          |                       |          |                                  |          |                                 |          |                                        |          |               |          |                                    |          |                         |  |  |

It deletes all spaces and tabs around point, leaving one space (or N spaces). N is the prefix argument. If N is negative, it deletes newlines as well, leaving -N spaces. (If PRESERVE-NL-BACK is non-nil, it does not delete newlines before point.)</li> <li>The second call in a sequence deletes all spaces.</li> <li>The third call in a sequence restores the original whitespace (and point).</li> </ul> The easiest way to use this command for the second or third call (or further) is to issue it once and then use the repeat command ( <b>C–x z</b> or <b>&lt;f5&gt;</b> ). |
| <b>Delete all trailing whitespaces</b>                                                                                                   | <b>&lt;f11&gt; t w t</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>(delete-trailing-whitespace &amp;optional START END)</b>  | Delete trailing whitespace in the entire (or narrowed part of the) buffer or in the marked region. <ul style="list-style-type: none"> <li>This command deletes whitespace characters after the last non-whitespace character in each line between START and END. It does not consider formfeed characters to be whitespace.</li> <li>If this command acts on the entire buffer, it also deletes all trailing lines at the end of the buffer if the variable ‘delete-trailing-lines’ is non-nil.</li> </ul>                                                                                                                                                                                                                                  |
| <b>Cleanup whitespace</b><br>Removes excess whitespaces: trailing whitespace, unnecessary or excessive indentation.                      | <b>&lt;f11&gt; t w c</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>(whitespace-cleanup)</b>                                  | Cleanup some blank problems (non-required whitespace) in all buffer or at region. <ul style="list-style-type: none"> <li>It usually applies to the whole buffer, but in transient mark mode when the mark is active, it applies to the region. It also applies to the region when it is not in transient mark mode, the mark is active and <b>C–u</b> was pressed just before calling ‘whitespace-cleanup’ interactively.</li> </ul>                                                                                                                                                                                                                                                                                                        |
| <b>Hungry Deletion of Whitespace</b>                                                                                                     | The CC mode provides two commands that can perform “hungry whitespace deletion” that can also be used in <b>every mode</b> . <ul style="list-style-type: none"> <li> PEL provides the convenient keys with the <b>&lt;f11&gt;</b> prefix keys for those 2 commands, available in <b>all modes</b>.</li> <li>In modes compatible with the CC Mode (e.g. for C, C++, D, Java, Pike, etc..) it is also possible to activate the Hungry Delete Mode to modify the behaviour of the simple <b>&lt;DEL&gt;</b> and <b>C–d</b>, to perform hungry deletions. That’s not currently supported in other modes.               <ul style="list-style-type: none"> <li>When the Hungry Delete Mode is on, the mode-line displays a ‘h’ to the right of the ‘/I’ indication of electric mode.</li> <li>The Hungry Mode also activates the key prefixes below that start with <b>C–c</b>. They are listed but remember they are only available once the Hungry state mode is activated (and that can only be done in modes that are CC Mode compatible).</li> <li>In modes derived from CC Mode you can also activate the hungry state to make standard delete commands delete hungrily, but that does not work for other modes. PEL provides the <b>&lt;f12&gt; M–DEL</b> key for those modes. See the specific modes for more info.</li> </ul> </li> </ul> |                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
