🔗 Feature Comparisons

Prefix/Suffix & Numeric Arg Keys

⌘ Emacs Features

⌘ Emacs Manual , Guided Tour of Emacs , Emacs Lisp Manual

• Emacs Docs: Emacs, Emacs Lisp

• Mastering Emacs, Awesome-Emacs

• MELPA and GNU ELPA

The tables at right describe Emacs concepts/features commands & key bindings. Cell background is light-blue for major mode, light-red for minor mode specifics, grey for links to sections of other tables. Cells link titles starting with ⌘ are Emacs generic features, blue links are external packages. The green links are mostly PEL extensions. Emacs commands can be executed by name or bound to key sequences. They describe the commands, their arguments and the key sequences bound to them.

• Emacs Keys and Numeric Arguments

You can also: Run Command by Name

Emacs uses a concept of modes:

• Emacs Major and Minor Modes

• Major Modes

• Minor Modes

• Choosing Modes

PEL provides several key sequences to toggle minor modes.

Hardware Description Languages

Lightweight Markup Languages

• Graphics Markup

Programming Languages Major Modes

Main Paradigm of Programming Languages

• Actor Model: Ⓐ Array ⓧ

• Concatenative Ⓚ Concurrent: ©

• Domain Specific Ⓓ

• Dynamic d Extensible ©

• Functional: ⓕ Pure: ⓕ

• Generic ⓖ homoiconic ⓗ

• Imperative: ① or no token

• Object Oriented ⓐ Procedural ⓑ

• Has Syntactic Macros: Ⓜ

• Multi-paradigm ↗ Reflective |

• System Level Ⓢ

The programming languages supported by PEL are listed here in alphabetical order.

Emacs (and PEL) also provides basic support for some of the one PEL does not support and for other programming languages not listed here.

Future support

for APL, Carbon, Crystal, Elm, Groovy, Haxe, Kotlin, Pony, Purescript, ReasonML, Rebol, Red, Scala, Typescript (based on my need for them or requests).
